

## Continuing to Set the Standard

As yet another example of our industry leadership, we are offering a retrofit safety barrier screen for units made before 2003 for those homeowners who may want or need one. **We will provide an ANSI-compliant retrofit safety barrier screen free of charge for our products manufactured before January 1, 2003. The consumer simply pays shipping costs.**

Although not required by the new ANSI standard, this effort is consistent with our "do the right thing" safety philosophy regarding consumer safety, and we urge all other manufacturers to follow suit.

If you have a homeowner that needs a safety screen, call us directly at **1-888-427-3973** so a representative can help them obtain the appropriate safety barrier screen. **The homeowner can also use our online order form on [Heatilator.com](http://Heatilator.com) or [Heatnglo.com](http://Heatnglo.com) under "Fireplace Safety."**

## Partner with the Best Brands

### Fireplaces are the Heart of the Home

Not only do your homebuyers love the comfort, warmth and ambiance that their Heatilator or Heat & Glo Direct Vent Gas Fireplaces and Inserts provide, but as a builder, you also appreciate that fireplaces set your homes apart and help increase your profits. Additionally, Direct Vent fireplaces and inserts provide optimal heat, conserve energy and ensure clean, healthy indoor air quality. Direct Vent technology is also recognized by major green building programs.

### Protect Your Homebuyers

As part of its normal operation, the glass fronts of these products will become very hot. We know that your number one priority as a builder is protecting your homebuyers, so it's important to keep children or others from coming into direct contact with the glass front of a gas fireplace or insert. Safety barrier screens help reduce the potential of a serious burn.

### A History of Industry-Leadership & Commitment to Safety

At Heatilator and Heat & Glo, we are committed to consumer safety, and proud of our leadership in product safety. For more than 9 years, we have included safety barrier screens as "standard equipment" on all Direct Vent gas fireplaces and inserts. Even today, no other manufacturer can claim to do this.

»»» Since 2003,

we have been, and still are, the **only manufacturer** to offer safety barrier screens as "standard equipment."

## Safety Screens That Work

### A Proven Track Record

Over the last 9 years, our safety barrier screens have been 100% effective. That means we've not received a single report of severe burns from a consumer contacting glass with a properly installed safety barrier screen.

**9** # of years we have been including safety screens as standard equipment. No other manufacturer has followed our lead

**Zero** # of reports of severe consumer burns resulting from our fireplaces with properly installed barrier screen

**100%** Proven effectiveness of our fireplace safety screens against severe burns

## Continuing to Lead the Industry

Unfortunately, our competition chose not to follow our lead over the last 9 years. **As a recognized industry leader in safety and the largest manufacturer of hearth products, we are making an effort to move the industry forward.** In 2012, Heatilator and Heat & Glo led the task force to revise the voluntary industry product certification standards for gas fireplaces (ANSI/GSA) with industry and federal regulators.

The revision to the standard for gas fireplaces will require safety barrier screens as standard equipment. This revised standard will be published by January 2013 by the American National Standards Institute (ANSI\*). All active products must comply by January 2015 in order to be certified.

You can count on us to continue to lead the industry by ensuring our standard safety screens comply to the newest standards, or modifying them if necessary, to meet it.

## Consumer Safety:

**Your #1 Priority. Our #1 Priority.**

It always has been, and it always will be.

\*The ANSI (American National Standards Institute) is responsible for helping assure the safety and health of consumers, and the protection of the environment. ANSI-compliant safety barrier screens meet standards established by this organization, and help reduce the potential of a serious burn.
