

HEAT-N-GLO

No one builds a better fire

INSTALLATION INSTRUCTIONS

TIARA PETITE

REPLACEMENT LOGSET INSTALLATION INSTRUCTIONS Part# LOGS-TP

While breakable, the logs do not become fragile until after the stove is burned and they have cured. After curing, any handling must be done with care as breakage may occur easily.

PLEASE NOTE: Logs have been designed to work specifically with the burner of the Tiara Petite. Exact placement will ensure proper operation of your gas appliance and reduce sooting.

Installation:

1. Gently remove top of unit and set aside.
2. Remove cast face by sliding straight up and setting aside.
3. Remove the glass by releasing the two latches located on the top of the stove. Lean glass frame forward and lift out.
4. Place the left log into the far left corner of the firebox as shown in Fig. 1.
5. Place the right log into the far right corner of the firebox as shown in Fig. 2. The twig should lay gently on the burner when installed properly.
