Fireplaces by Building Type

Bring the signature element of fire into any built environment with Heat & Glo fireplaces—approved for residential, light and heavy commercial, and institutional properties. As the Hearth Experts, we recommend the fireplace models to fit the type of building you’re designing by considering building codes, ease of installation, program budget and client preferences.

Entry-Level Homes	2

Multi-Unit Dwellings	12
Commercial Spaces	14
Senior and Assisted-Living Facilities	16
Remodel Projects and Historic Renovations	17
Custom Fireplaces for Homes and Commercial Spaces	18

A Hearth In Every Home

The fireplace is the focal point of the home—a place of connection, relaxation and where memories are made. In fact, most homebuyers rank a fireplace as their #1 preferred decorative feature. Regardless of the home’s square footage, your targeted demographic or intended use of the space, we have a hearth product to help achieve the goals of you and your clients. Our product line is built on a Best-Better-Good tiering system that helps you specify the ideal fireplace for the fit, feel and finish of the home or commercial venue you’re planning.

Entry-Level Homes

Even with starter homes being more modest in square footage and price, you can still include a fireplace to match these parameters without sacrificing quality, performance and style for the homebuyer. An entry-level home should have at least one fireplace inside or outside.

DIRECT-VENT GAS FIREPLACES

SlimLine, SlimLine X and SlimLine Fusion Choose from four sizes to stay proportionate with the space and four price points to meet your cost goals, plus aesthetic and technology options to allow buyers to suit their tastes. The SlimLine Series lower-profile design allows you to frame one into a wall as thin as 16-1/4", saving on overall square footage. The SlimLine 3 and SlimLine 5 often fall into the sweet spot for these housing applications. Upgrade to the SLX models for added options. For a contemporary feel, specify the SlimLine Fusion.

Cosmo 32/36 Affordable, linear and chic, the 32" and 36" models are a great economical fireplace to spec into entry-level homes calling for a modern hearth look.

ELECTRIC FIREPLACES

SimpliFire Allusion No gas line? No problem! The captivating Allusion electric fireplace delivers beautiful LED flames in a linear style with no gas for fuel and no venting. It fits into a finished 2x6 wall (or larger).

SimpliFire Built-In This is the electric fireplace for homes where you want a more traditional style fireplace. You can bring finishing materials up to the edge in a clean look with no visible heat vents or mesh screen.

WOOD-BURNING FIREPLACES

Energy Master Not all municipalities allow wood-burning fireplaces in residential spaces. However, if you're designing an entry-level home in one that does, the efficient Energy Master is the right place to start.

OUTDOOR FIREPLACES

Villa Wood/Villa Gas To expand the boundaries of comfortable living, choose our most affordable outdoor wood-burning and gas fireplace models respectively.

Move-Up Homes

As the overall size and grade of a home move up, so do the expectations of the clientele these properties are marketed to. A move-up home should have at least two fireplaces.

DIRECT-VENT GAS FIREPLACES

6000/8000 Series These 42” and 48” models are Heat & Glo’s respective “bread and butter” and best sellers in our retail showrooms. Their appearance and performance are industry-leading and both models have plenty of optional add-ons to help you mesh the fireplace with the home’s overall design theme.

Cosmo 42 The chic accent lighting on this unit makes it a glam-forward linear solution that will work well with your program’s budget and sit proportionately within your space.

ST32/ST36 Mid-range homes are where you begin to see multi-sided gas fireplaces. You can install these See-Through (ST) options in interior walls and vent them vertically or horizontally through the roof, wall or floor by using a Power Vent accessory.

Move-Up Homes

ELECTRIC FIREPLACES

SimpliFire Allusion Platinum The cousin to the standard Allusion electric fireplace features less exposed trim and venting and adds a sleeker statement to move-up homes.

WOOD-BURNING FIREPLACES

Exclaim Bring the feel of a crackling fire into your home plans with spacious viewing up to 50" and a choice of brick interiors.

OUTDOOR FIREPLACES

Courtyard This finely crafted traditional outdoor gas fireplace can be tailored to match almost any outdoor area.

Lanai This linear outdoor gas model can be installed in the facade/envelope of the home or in a free-standing structure.

Luxury/Custom Homes

For luxury and custom homes, your clientele is often the most discerning. With many unique requirements to consider when planning these residences, the fireplace is the linchpin that holds the home together creating a signature focal point and timeless atmosphere.

As the square footage of your home grows, so should the number of indoor/outdoor fire features you install on the property. We recommend that a luxury home has multiple indoor and outdoor fireplaces. Work with your client early to include the fireplace in your schematic designs and be sure they understand they have multiple options available to tailor-make their hearth.

DIRECT-VENT GAS FIREPLACES

Mezzo/Mezzo See-Through The Mezzo is the fireplace to spec if your fireplace is intended to supply both a modern feel and robust heat to any space. Specify the 36" Mezzo for smaller rooms and the 48" and 60" models for mid-size to larger rooms. Does an expansive area of the home need a grand feature? Specify the Mezzo 72" for a dramatic effect.

Mezzo 60

Mezzo See-Through 60

DIRECT-VENT GAS FIREPLACES, cont'd

True If there was such a thing as a high-definition fireplace, it would be the True. This gorgeous gas fireplace has an expansive viewing area, anti-reflective glass, high-definition logs and accent lighting that will meet the approval of your most detail-orientated clients.

Escape See-Through This model takes the high-definition features of the True and configures them into a two-sided, see-through masterpiece. Include one in an interior wall of your home plans to add a distinctive “wow” factor to the layout.

Cerona This elegant true-arched fireplace is a lavish addition to luxury homes. Go with this fireplace for homes seeking plenty of supplemental warmth from the fireplace.

DIRECT-VENT GAS FIREPLACES, cont'd

Custom Gas Fireplace When a home calls for something truly spectacular, choose the Stellar by Heat & Glo custom line to bring to life a fireplace that hasn't been imagined yet. If your client doesn't see what they are looking for in our catalog, we can help you craft a UL-listed fireplace that will make the house you're planning unforgettable and unique. Stellar designers can deliver on virtually any size and any shape imaginable and with customization options ranging from spinning burners to fogged privacy glass for a top-shelf fire presentation.

ELECTRIC FIREPLACES

SimpliFire Scion The clean flush look of this electric unit is on par with the best. The vibrance of its LED flames makes this modern take on fire an easy feature to specify in luxury homes in net zero communities or where a combustion-free hearth product is desired. The Scion is an economical way to add a second or third fireplace to your property.

SimpliFire Scion Trinity Create an alluring atmosphere from any angle with the available configurations of this top-end electric fireplace. It adds a stunning atmosphere in three-sided, corner or single-sided styles where you can finish your wall in a sleek look.

WOOD-BURNING FIREPLACES

NorthStar The super-efficient NorthStar exceeds EPA 2020 standards as perhaps the cleanest wood-burning fireplace on the planet. It is the ideal fit where conventional wood fireplaces are banned.

Rutherford Heat & Glo's premium non-EPA certified wood model is big, bold and beautiful.

OUTDOOR FIREPLACES

Fortress Because the Fortress is technically an indoor/outdoor fireplace, it is ideal for a luxury home where you want an outside-the-box hearth presentation that will wow clients and potential homebuyers. It is a natural for adjacent indoor/outdoor gathering spots.

Castlewood This premium wood-burning model turns any outdoor area into a welcoming and relaxing living space.

Low-/No-Heat Fireplaces

Fire adds light, motion and comfort as the focal point in any design, but the warmth desired can depend on the local climate or intention for the space. Think of homes in California, Arizona or Florida, or of clients who entertain often and must consider the cumulative body heat of guests. Our heat-management solutions in the following fireplaces mitigate or remove the heat to maintain the desired comfort.

DIRECT-VENT GAS FIREPLACES

Phoenix TrueView This model produces only mild heat for year-round enjoyment. Without a glass front like most gas fireplaces, the Phoenix amplifies the fireside aesthetic and experience of tailor-made properties.

Primo If your client wants warmth from their fireplace but only “sometimes,” the Primo can supply heat in the room in which it is installed, or re-direct it to an adjacent room or completely outside the home.

Foundation The stunning fireplaces in the Foundation lineup present a sculpture of flame in your home. Specify a Single-Sided, See-Through, Pier or Bay model that delivers the same eye-catching, glass-on-glass look with a surface that’s safe to the touch and enables you to apply any wall finish flush with the fireplace viewing area. They add virtually no heat to the room in which they’re installed while delivering some of the largest, most robust flames on the market.

Tiny Homes

The niche segment of Tiny Homes is booming and a clever way to have your tiny home stand out is by including a warming hearth feature designed for compact spaces.

DIRECT-VENT GAS STOVE

Tiara Petite With “petite” in the name you can guess that this little gas stove takes up hardly any space. With 100 percent of combustion by-product vented outside, this fire feature enables you to support the good indoor air quality of the home you’re planning.

Tiara Petite

ELECTRIC FIREPLACE

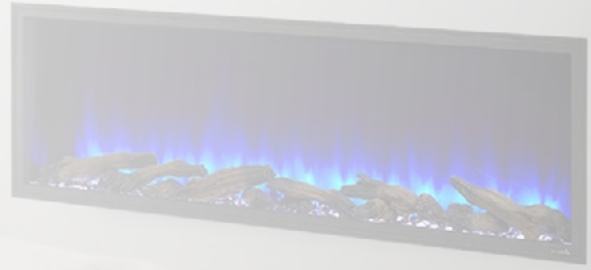

SimpliFire Wall-Mount You can hang this fireplace on the wall like a flat-screen TV, taking up no added square footage and only requiring an electrical outlet. Pick the smaller 38” model when designing this product into your tiny-home plans.

Wall Mount 38

Multi-Unit Dwellings

Architects and designers often omit a fireplace in the individual units of these types of buildings, but owners, renters and guests for multi-unit spaces will often pay a higher rate for rooms or living units that include a fireplace. And Heat & Glo has options that are straightforward to install.

DIRECT-VENT GAS FIREPLACES

SlimLine Series Specify an ultra-thin unit like the SlimLine series and use a single rear vent directly out the back to easily and economically vent through the building envelope. Our SlimLine Series is the ideal fireplace for adding warmth, prestige and value to the living quarters of your next multi-family project. With an ultra-slim firebox (16-3/4") and a vent that terminates horizontally from the back of the unit, this solution saves square footage and keeps your HVAC engineering simple and economical.

ELECTRIC FIREPLACES

The SimpliFire lineup: Scion Trinity, Scion, Allusion Platinum, Allusion and Built-In As these units require no fuel source and no venting components, specifying these fireplaces is very easy for homes with shared walls and where a gas line connection may not be possible.

ELECTRIC FIREPLACES, Cont'd

WOOD-BURNING FIREPLACES

Energy Master and Exclaim Pay close attention to building codes if specifying a wood-burning fireplace in a condo, apartment or hotel room. Placement of the chimney and the units is vital to ensure proper functioning. Often you can only install wood-burning units in top-level rooms or living quarters. Rustic-themed resorts and hotels may call for these types of fireplaces in-unit.

Commercial Spaces

Several market sectors—including hospitality, restaurants, event venues, retail, office spaces and government buildings—have lobbies and gathering areas that a fire feature significantly enhances. If used correctly, a fireplace can become an unforgettable element of your property. The fireplace should match the style and prestige of the overall building.

DIRECT-VENT GAS FIREPLACES

True 50 For those times when you need an impressively large traditional fireplace, the head-turning True 50™ model will not disappoint. Its impressive viewing area and high-BTU output will provide building occupants with a warm welcome..

True 50

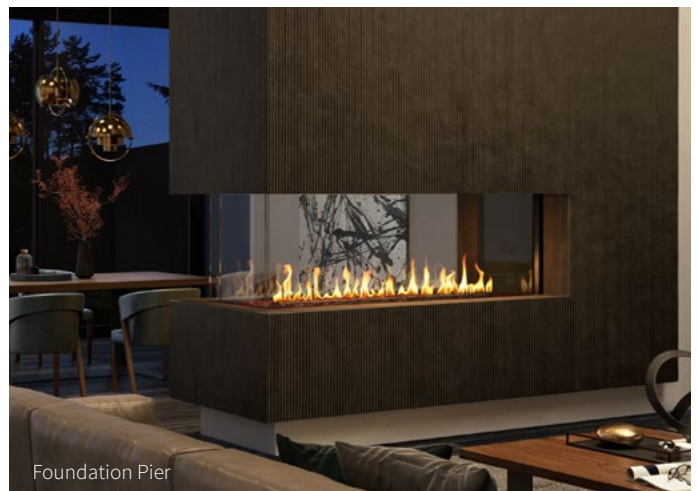

True 50

Foundation Made with Honeywell® commercial-grade components, the Foundation lineup is simply the most stunning and sophisticated linear fireplace on the market. Named the prestigious “Best Indoor Living Product” at the 2019 International Builders’ Show, it adds supplemental heat to the room in which it’s installed and features safe-touch glass, making it ideal for high-trafficked amenity spaces. Incorporate the three-sided Pier or Bay models as a unique way to lightly separate spaces in a commercial floor plan.

Foundation See-Through

Foundation Pier

ELECTRIC FIREPLACES

SimpliFire Scion Our premium linear electric model is a superb fit for conference rooms, office suites and retail stores, providing a delightful atmosphere with no need for gas or venting.

SimpliFire Scion Trinity Elevate your space with available configurations of three-sided, corner or single-sided styles in this top-end electric fireplace where you can finish your wall in a sleek look.

WOOD-BURNING FIREPLACES

Energy Master and Exclaim Pay close attention to building codes if specifying a wood-burning fireplace in a condo, apartment or hotel room. Placement of the chimney and the units is vital to ensure proper functioning. Often you can only install wood-burning units in top-level rooms or living quarters. Rustic-themed resorts and hotels may call for these types of fireplaces in-unit.

Senior and Assisted-Living Facilities

Balancing utmost safety and convenience with great looks are top of mind for fire features in these settings. Heat & Glo exceeds expectations on all fronts as the industry leader.

DIRECT-VENT GAS FIREPLACES

Primo This modern linear gas model is ideal for the “main” fireplace in the common area of the complex. The unit’s glass and surrounding wall are kept at a safe temperature for vulnerable adults.

ELECTRIC FIREPLACES

SimpliFire Built-In Enhance the living units of your senior living project with an electric fireplace. The traditional style resonates well with the elder clientele while the LED flames that run without any real fire ensure the safest fireside experience.

Remodel Projects and Historic Renovations

Are you working on a remodel project—perhaps an extensive home remodel or a commercial building undergoing a historic rehabilitation? If these projects involve updating or remodeling an existing fireplace, Heat & Glo is a proven partner to help you.

DIRECT-VENT GAS FIREPLACE INSERTS

Escape and Supreme These trend-forward solutions sit inside an existing masonry fireplace and transform it into an attractive, user-friendly, low-maintenance and thermally efficient gas appliance. And your project is a success without compromising your exterior facade or other elements that are important to keeping its historic integrity.

Custom Fireplaces for Homes and Commercial Spaces

Does your brand call for a space to be designed as a showstopper? Does your built environment require an eclectic décor execution? Are you looking to build a design vision that will be held on a pedestal by your clients and your colleagues?

A custom gas fireplace allows you to design a fireplace of any shape and size. Custom designs also let you add technology and aesthetic features that make your commercial property pop. For example, envision fogged privacy glass, floating and cantilevered installs, unique burners, customized exterior and interiors—including Envision Panels to customize your fireplace interior with any photographic image of 300 dpi resolution or higher. Deliver a truly personalized fireside experience and give your clients everything they wanted and more with a custom solution from Stellar by Heat & Glo.

Stellar Fire Features In any size, any shape and for any location, combine bold creativity and advanced technology for those customized luxury hearth projects that a conventional fireplace just can't measure up to, in both traditional and contemporary styles.
