Outdoor Gas Fire Pit
In 1927, Charles Lindbergh flew across the Atlantic and Heatilator introduced the first factory-built air circulating fireplace.

This revolutionary product forever changed the industry and enabled more consumers to have a fireplace in their homes.

For more than 90 years, Heatilator has remained true to its roots. Today, a full line of well-crafted hearth products provide value to homeowners in a broad range of design choices. Heatilator remains the most preferred and installed brand by building professionals—a testament to the unyielding quality and trust behind the Heatilator name.
Why a fireplace?

From an elemental standpoint, fire is king. From a design standpoint, the regal ambiance a fireplace brings to a space is undeniable. With today’s hearth innovations and technologies, it’s possible to include a fireplace in virtually any room in your residential or commercial project.

Both indoor and outdoor fireplaces remain in the “Top 5” decorative product features by homebuyers.

– 2017 Homebuyer Housing Preferences across Generations, NAHB

Indoor fireplaces are the “#1 must have” home feature for homebuyers.

– 2016 Realtor.com Homebuyer & Realtor Research

Fireplaces, both indoor and outdoor, are one of the top most sought after features by homebuyers and realtors.

– 2016 Angie’s List Homebuyer & Realtor Research

Fireplaces/firepits are the #1 most popular outdoor design element.

– 2018 American Society of Landscape Designers Annual Residential Landscape Architecture Trends Survey
Seeing Is Believing

Competitors have tried to say their fireplaces are bigger, but are they really? Consumers can be misled by fireplace measurements that are not standardized. With Heatilator, you can show the consumer the difference.

The Heatilator brand uses a simple system that features the width of the fireplace’s viewing area right in the product name. Consumers care about what they “see” not what is hidden. For example, the width of the viewing area on the Novus 36 fireplace is 36 inches.
Heatilator Makes Specifying Simple

Have confidence in your plans by leveraging our array of design and specification tools including proprietary CAD drawings compatible with the latest AutoCAD software, and 3D Revit BIM objects and families. Heatilator also has complete 3-Part CSI/CSA fireplaces specifications for you to add instantly into section 10-31-00 of your construction documents. Find everything you need at pro.heatilator.com.
Design Considerations

The placement of the fireplace is critical to specifying the right fireplace for the right project. When evaluating how to best work a fireplace model into your floor plan, make sure to work with your local Hearth Expert™ to factor in the following components:

**Exterior Wall**
A classic application that suits both traditional and modern fireplace models. These applications typically employ the most simplistic vent runs, but may require an exterior chase or bump out.

**Corner**
Best used in floor plans with minimal square footage or where other architectural elements (i.e. windows) take precedence as a focal point. Traditional models or smaller modern linear models work best for these applications.

**Interior Wall / Island**
An interior island application is an innovative way to enhance a space. See-through models are highly desired for these types of design, particularly in open floor plans. These applications may require a power vent system and a more complex vent run.

---

**Install Virtually Anywhere: Power Venting Technology**
Fireplaces aren't just for exterior walls. A fan-powered accessory with slim venting can zigzag throughout your home – up, down, over or under – making it possible to install a gas fireplace virtually anywhere.
Specification Check List

Planning is critical to ensure the model you are specifying will work with your home plans. When specifying a fireplace model for your floor plan, make sure to work with your local Hearth Expert to factor in the following factors:

**Framing Dimensions**
For both the fireplace itself and for any vent pipe that must terminate through a wall.

**Connection Requirements**
Make sure you understand where venting, gas and electrical connection points are located on the model you’re specifying.

**Vent Run Requirements**
The maximum and minimum lengths required for vertical, horizontal and mixed vent runs may vary from model to model. Understanding these parameters early on is essential when deciding which fireplace model to choose and where to best place it in your plans.

**Clearances to Combustibles**
For mantels, flooring, surround material and appliances adjacent to the fireplace.

**Exterior Termination Location**
Know the distances needed from the termination cap to nearby windows, overhangs, soffits and sidewalks.
Heat Management Solutions

Increase homebuyer satisfaction by specifying a model with heat management.

**PASSIVE HEAT™ KIT** Allows heat to disperse naturally (no fan) into the room, reducing surface temperatures. Choose side, front or open wall register.

**SMART WALL™ KIT** Design flexibility with an automatic fan that allows a TV to be mounted 12” above the fireplace without a mantel or shelf.¹

¹ The SmartWall fan will and must run continuously to move the heat away from the area above the fireplace. Also minimum guidelines must be followed:
- Minimum of 3” gap between the TV and wall at all angles
- Minimum of 24” to side wall
- Ambient room temperature 75°F or less
- See TV manufacturer’s recommendation for TV operating temperatures
- Minimum 60” from the top of the fireplace opening to the ceiling

**HEAT-ZONE® KIT** Draw heat from your fireplace to another room in your home, up to 20 feet away. Redirect up to 50% of the heat, while reducing wall temperatures above the fireplace.

**HEAT-OUT® KIT** Draw heat from your fireplace and direct it outside. Redirect up to 40% of the heat while reducing wall temperatures above the fireplace.

**PASSIVE HEAT™ KIT** Allows heat to disperse naturally (no fan) into the room, reducing surface temperatures. Choose side, front or open wall register.

**SMART WALL™ KIT** Design flexibility with an automatic fan that allows a TV to be mounted 12” above the fireplace without a mantel or shelf.¹

¹ The SmartWall fan will and must run continuously to move the heat away from the area above the fireplace. Also minimum guidelines must be followed:
- Minimum of 3” gap between the TV and wall at all angles
- Minimum of 24” to side wall
- Ambient room temperature 75°F or less
- See TV manufacturer’s recommendation for TV operating temperatures
- Minimum 60” from the top of the fireplace opening to the ceiling

**HEAT-ZONE® KIT** Draw heat from your fireplace to another room in your home, up to 20 feet away. Redirect up to 50% of the heat, while reducing wall temperatures above the fireplace.

**HEAT-OUT® KIT** Draw heat from your fireplace and direct it outside. Redirect up to 40% of the heat while reducing wall temperatures above the fireplace.
Key Technologies

**DIRECT VENT TECHNOLOGY**
Direct Vent fireplaces remove 100% of combustion exhaust and odors outside of the home. These sealed fireplaces provide optimal heat, conserve energy and ensure clean, safe indoor air quality.

**POWER VENT™ TECHNOLOGY**
A power vent is a fan-powered accessory allowing for longer more complicated vent runs – making it possible to install a gas fireplace virtually anywhere in a property.

**WHISPERTONE™ TECHNOLOGY**
Patent-pending system which allows airflow with minimal sound, the ability to horizontally terminate, and an automatic damper which stops air movement when the fireplace is off, thus preventing cold air infiltration into the home.

**INTELLIFIRE® IGNITION SYSTEMS**
Advanced intermittent pilot ignition systems with memory settings and programmable RC300 or RC400 remote controls. IPI systems constantly monitors ignition, ensures safe functioning and conserves up to $10/month in energy costs. Options Include IntelliFire, IntelliFire Plus and IntelliFire Touch.

Product Features
Traditional Gas Fireplaces
Legacy

Just you and the fire. The patent-pending design of the Legacy TrueView Series provides a large, traditional fireplace opening with a clear view of the fire without any glass. Mild heat and easy, one-touch operation allows you to comfortably run your fireplace year-round. Plus, it offers design flexibility to safely place a TV just 12 inches above the fireplace without a mantel.

### Powered by WhisperTone™ Technology

1. Room air is used for combustion through the open front.
2. Combustion air then flows into the insulated chamber.
4. Automatic damper allows combustion out, keeps heated room air in.

- No glass
- Horizontal termination
- Automatic damper
- Mild heat output
The Heirloom provides authentic masonry style without the costs of a site-built masonry fireplace. The largest 36, 42 and 50-inch viewing areas in their class showcase intense fires and textured brick refractories. Powerful heat and high-efficiency performance help make the Heirloom a welcomed addition to any home. Enjoy total control while operating your fireplace. It is simple, smart and safe with IntelliFire™ Touch. Select the touchscreen remote control or wireless wall switch for the solution that fits your life.

Wood-Burning Fireplaces
Why A Wood Fireplace?
Heatilator wood-burning fireplaces are a robust, reliable and budget-friendly alternative to true masonry fireplaces and are ideal for projects where the hearth is used seasonally or when end-users are seeking the hands-on experience of a wood-fueled appliance. It’s important to understand local codes when specifying wood burning models, particularly when seeking to comply with EPA requirements and other state and city mandates.

Termination Requirements for Wood Burning Fireplaces
The quality of the fire depends on where you design—in the chimney and termination components for the specified wood-burning model. It’s important to meet with a local hearth installer early in the design process to ensure proper termination placement. Variables such as roof angle, prevailing wind location, and nearby overhangs, objects and openings may need to be taken into consideration.
**Birmingham**

The Birmingham offers high performance and flush hearth designs for finishing right up to the opening. The appearance of a custom-built masonry fireplace at a fraction of the cost.

Indoor/Outdoor Fireplaces
Why An Indoor/Outdoor Fireplace?

Today’s hearth technology allows for a vast array of architectural products designed to seamlessly blend inside and outside areas together. Indoor/Outdoor gas fireplaces are engineered for two sided applications, creating a beautiful portal to the outdoors while keeping your building envelope secure and thermally efficient. Flank with windows and glass and create a focal point with a view.
Twilight II

Add warmth and beauty to two spaces—with one fireplace. The Twilight II is the world’s first see-through indoor/outdoor gas fireplace. Enjoy the fire all year long, and from either side. An advanced design exceeds both window and gas fireplace standards, and rugged construction ensures impressive, consistent performance.

Outdoor Fireplaces
Why an Outdoor Fireplace?

Adding a fireplace to your outdoor space design will extend its seasonality and deliver a vibrant feature that your clients will clamor for. Designed specifically to withstand the elements, outdoor fireplaces come in a variety of styles to suit the goals of your clients and end-users. Incorporate into your exterior building envelope or as an attractive free-standing island application.

Outdoor fireplaces are in the top 5 most essential and desired outdoor home features¹. Fire features are the most popular outdoor design element². 90% of real estate agents say an outdoor fireplace increases a home’s value³. 70% of design and build firms report an increased demand for outdoor living space⁴.

Montana

The Montana is the original outdoor fireplace that started it all. It’s fashionably built to withstand adverse weather conditions and deliver solid performance—season after season, year after year.

built to last, season after season after season

Outdoor Gas Fire Pit
Plaza
The Plaza outdoor linear gas fire pit allows you to invite your neighbors to gather around the fire (2 or 4’ lengths) or add a dramatic statement piece in your space (6, 8 or 10’ lengths). Make this fire feature your own with endless finishing options to complete your outdoor oasis. With only a flick of a lighter, sit back and enjoy.
