

ENDURING WARMTH

Windsor Series Plate Steel Wood Burning Stoves and Insert

STYLE BURNING STRONG

Crafted from premium steel and cast iron, the Windsor Series of Wood Burning Stoves and Insert pair traditional durability with modern convenience — providing a reliable long-term heating system. These low-maintenance non-catalytic stoves use airflow and a baffle system to reburn smoke and gasses, providing a clean, efficient burn. They also feature an Airwash system, which circulates air to keep the large glass doors clear of soot and ash. Available in 3 sizes each offered in 2 styles, there is a Windsor model that is well-suited to your home.

Choose Your Style: Classic or Horizon

Our Classic style features a traditional cast iron door, as well as a 3/16" rolled top. The Horizon design comes equipped with cast iron legs and door featuring a timeless sunburst design. Plus, it offers additional durability with a thicker 5/16" top. For more flexibility in installation, convective side panels come standard with the Horizon style.

Efficiently Manufactured

The Windsor line is produced in our energy-efficient factory using recycled materials. Your new stove or insert is both crafted with eco-friendly processes and designed to be an effective heating source for your home.
