## 1. Introduction and Appliance Description

### Introduction

Hearth & Home Technologies, LLC. (HHT) retained OMNI Test Laboratories to perform U.S. Environmental Protection Agency (EPA) certification testing on the P43-C wood pellet stove. The unit is a pellet-fired free standing room heater.

Testing was performed at OMNI-Test Laboratories located in Portland Oregon. The altitude of the laboratory is 30 feet above sea level. The unit was received in good condition and logged in on August 1, 2023, then assigned and labeled with OMNI ID #2470.

This report is organized in accordance with the EPA-recommended outline and is summarized in the Table of Contents immediately preceding this section. Performance test data of run 1 and run 2 which are invalid are summarized in Appendix A and B. The results in this report are limited to the item submitted.

P43-C was tested in accordance with the U.S. EPA 40 CFR Part 60, Subpart AAA – Standards of Performance for New Residential Wood Heaters using ASTM E2515 and ASTM E2779. The fuel used for certification testing was PFI graded fuel. Particulate emissions were measured using dual sampling train consisting of two Glass Fiber 47mm filters (front and back), and first hour emissions were measured with a separate sampling train.

The unit was tested for thermal efficiency and carbon monoxide (CO) emissions in accordance with CSA B415.1-10. Efficiency results were calculated using spread sheet Version 2.4 created 04/15/2010 and distributed by CSA. Example calculations for CSA B415.1 were not provided by CSA; spreadsheet is protected from modifications by means of a password.

### Summary of Test Results

The results from the integrated test run3 are summarized as follows:

The overall emissions of the single integrated test run indicate a particulate emission rate of 1.82 gram per hour.

The particulate emission factor of the single integrated test run was measured to be 1.19 gram per kilogram of dry fuel.

The thermal efficiency of the integrated test run was measured to be 76.7%.

The emission rate calculated from the first hour sampling was 2.63 grams per hour.

The P43-C test results are within the emission limit of 2.0 g/h for affected appliances manufactured after May 15, 2020.

The proportionality results for the single test run were acceptable. All other validity criteria were within specified limits, and no sampling anomalies occurred. Quality checks of the results for this integrated test run are presented in Section 5 of this report.

## Appliance Description

The P43-C wood pellet stove manufactured by HHT are pellet-fired free standing room heaters for residential or mobile home installation. The unit consists of a fuel hopper, firebox, burn pot, convection blower, combustion blower, and an auger motor. These components are controlled by a circuit board that controls convection blower speed, auger duty cycling and voltage, and combustion motor speed depending on the desired heat output. Ashes fall through the burn pot into a removable ash drawer located at the bottom of the unit, the drawer is accessed through a mild steel door. Combustion products are routed out of the firebox via a baffle type heat exchanger and vented through a 3" diameter flue collar located at the back of the appliance. The unit is made of mild steel.

More detailed information is shown in the manufacturer's design drawings of this report. This information is considered confidential business information (CBI) by the manufacturer and is not included in the non-CBI version of the report.

	
Free Standing Wood Pellet Stove	Control Board
	
Firebox and Burn Pot	Fuel Hopper

## 2. Testing Preparation and Facility

### Conditioning

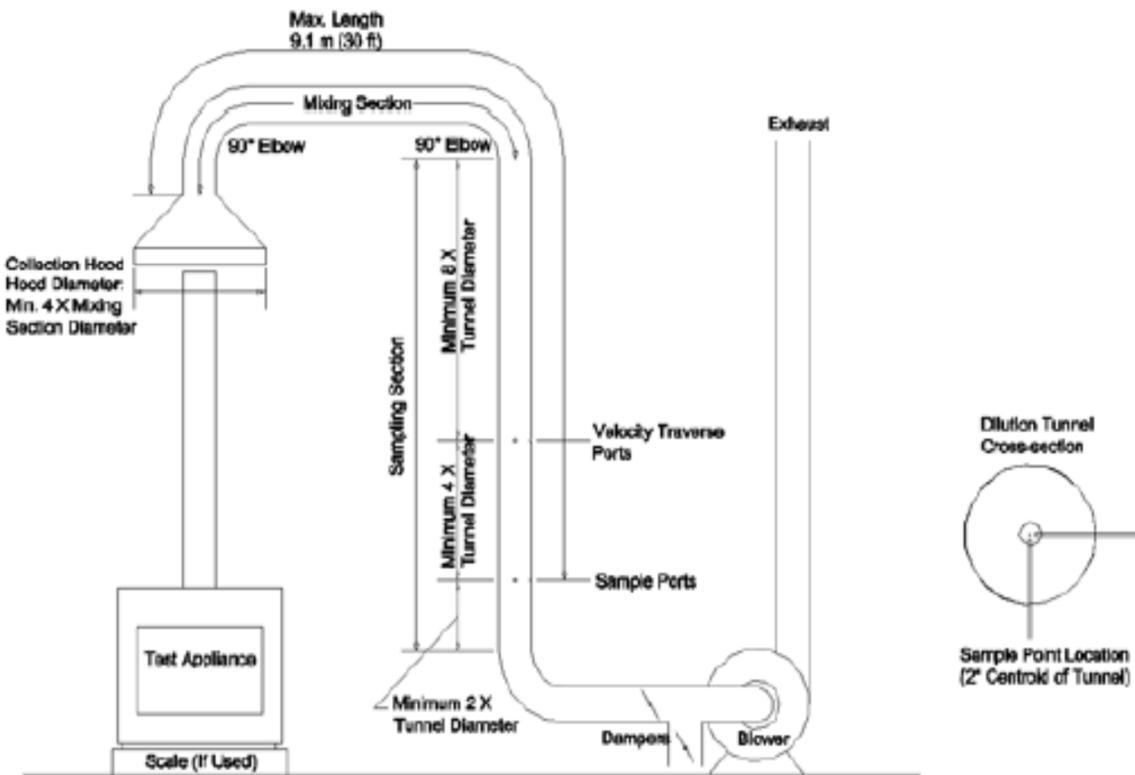

The required minimum 50 hours of conditioning was conducted by the manufacturer in advance of shipment of the appliance to OMNI. See Section 4 of this report for the conditioning data.

### Appliance Installation

In preparation for testing, the appliance was placed on a 1000 lb. capacity scale and fitted with 3 inch double wall pipes to a height approximately 15 feet from the top of the scale under the dilution tunnel collection hood. At 8.5 feet above the top of the scale the flue pipe was fitted with a 3/8" diameter hole for ready access of a flue gas probe and with a 3/16" diameter hole for ready access of a flue temperature probe. A 3/8" diameter hole was also procured at the flue pipe less than 1 foot above the flue connector for the purpose of serving a draft probe. All joining sections of pipes and flue attachment were sealed with furnace cement.

### Dilution Tunnel

OMNI's facility has permanent and dedicated dilution tunnels that were designed and are maintained to meet the specifications of the dilution tunnel specifications prescribed in ASTM E2515. The dilution tunnel was cleaned on 10/19/23 prior to the test, sample point and travers point locations were verified to ensure placement is within specifications.

Prior to testing, sample point and travers point locations are verified to ensure placement is within the specification of ASTM E2515. Collection hood, tunnel diameter, and mixing section length are also verified to be within specifications.

## Sampling Systems

The sampling systems consisted of two independent systems, each managing two dry gas meters (a total of four dry gas meters). One of the systems was designated for sampling of Train A and Train B for the duration of test(s), and the other system was designated for sampling of the First Hour emissions and background ambient particulate. These systems were arranged identically to and in accordance with Section 6 of ASTM E2515 with the only exception that the pressure drop through an orifice on the exhaust end of the meter(s) were monitored with a manometer to aid in identifying and responding to changes in the sample flow rate(s).

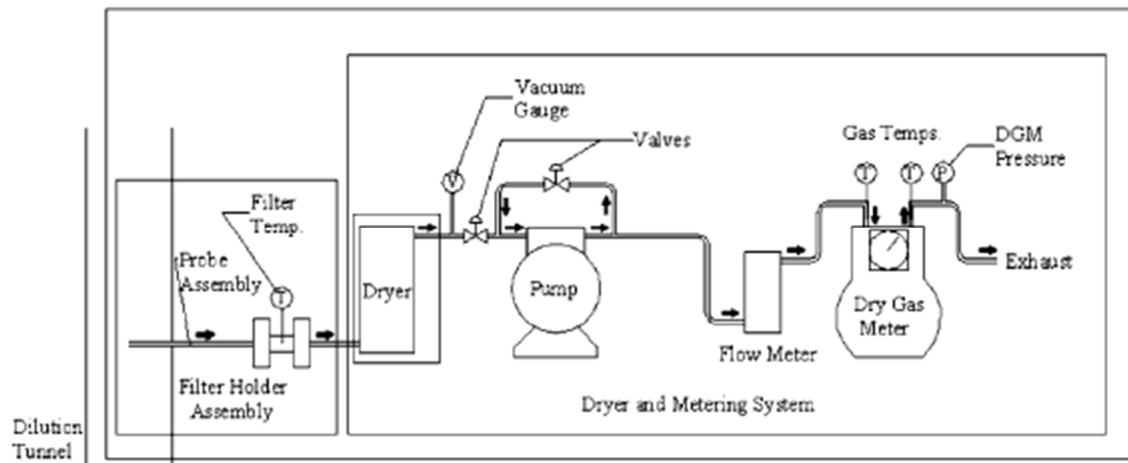

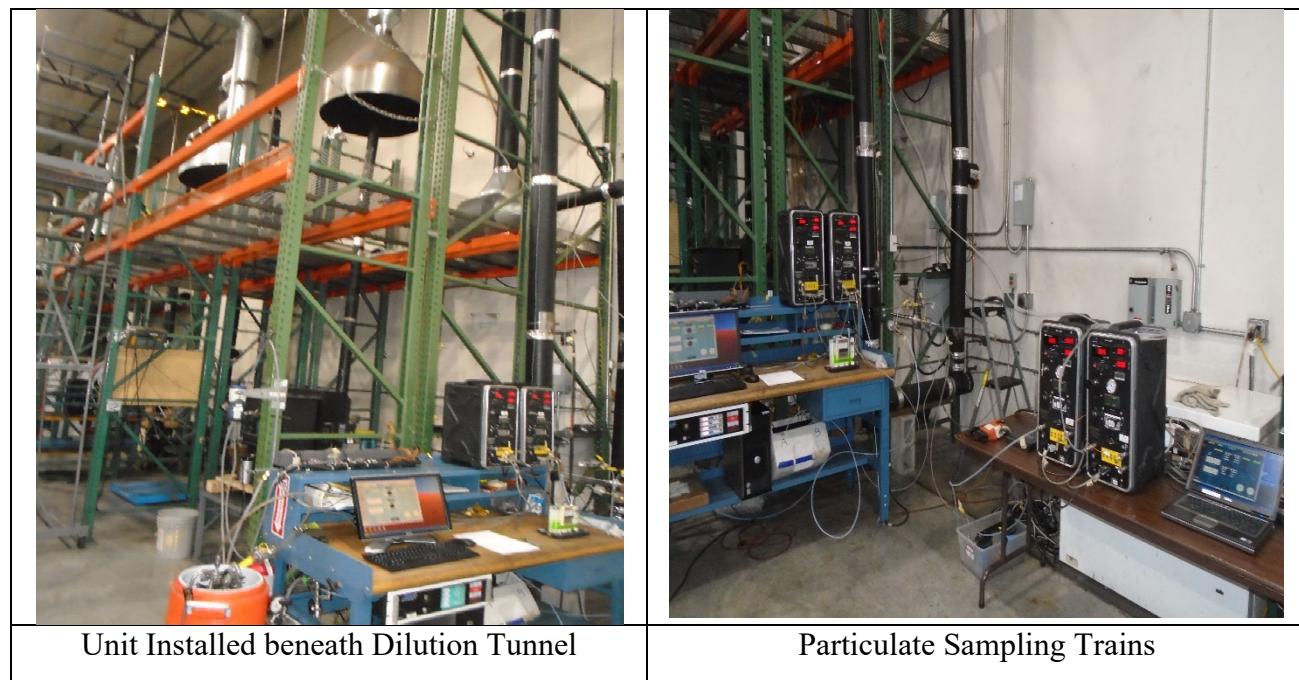

Figure of Particulate Sampling Train from E2515-11

### **3. Test Procedure and Results**

**P43-C Manufacturer Test Instructions.**

**Preset:**

Remove from ashpan area: scraper, brush, firebrick, Flame guide, DDM

Fully clean stove and scrape burn pot.

Install cast Flame guide onto burn pot.

Install firebrick horizontally on ledge above flame guide.

Fully insert ashpan until it is against firebox back.

Load 40 pound bag of Energex Pellets.

Press down on hopper handle to fully close hopper lid (clicks in place)

Do not open hopper lid during test.

Connect DDM to stove control board.

**Power supply:**

Make sure Range Switch is Low Range and Frequency knob is 60Hz.

Set Volts knob to 114V then slowly increase until supply just changes to 115V.

Set Mode knob to OFF before plugging in stove.

Plug in stove to power supply.

Stove Draft adjust -34V (already set).

Set stove Igniter switch to Auto.

**High:** (Setting when ready to start stove, stove preheat takes about 1.5hours)

Feed Adjuster knob: Feed 45.0s (#4.17+- .02 on screen d)

Temperature knob: Full Clockwise #7

Mode knob: Full Counter Clockwise into the (Constant burn mode)

**Medium<50%:**

Feed Adjuster knob: 27.5s (#2.15+- .02 on screen d)

Temperature knob: #1.53 or 301F setpoint

Mode knob: Mode knob pointer center down (Constant burn mode)

**Low:**

Mode Dial to lowest spot on green section. Or the "C" in Constant Mode.

Feed Adjuster knob: 20.0s (#1.33 screen d)

Temperature knob: Full Counter Clockwise #1

**End of Test:**

Mode knob: OFF position.

## Test Description

**Run 1 (08/07/2023)** - Run 1 began as scheduled on August 7, 2023. However, it was subsequently learned that the parameter of feed rate setting on the control board was not configured as intended by the manufacturer, which made the test run invalid.

**Run 2 (08/28/2023)** - An additional inadvertent suspension in testing occurred due to erroneous readings by the appliance's control circuitry of the appliance's integral flue gas thermal sensor causing the control board to make incorrect self-adjustments from the design parameters. The manufacturer conditioned and supplied a new inspected specimen (meeting all original design specifications). Therefore, this test run was considered invalid.

**Run 3 (10/25/2023)** - Test procedures described in ASTM E2779-10, ASTM 2515-11 were followed to perform an integrated test run comprised of maximum, medium and minimum burn rate segments. Set the feed rate of parameters at the control board to 4.17 for high burn rate segment and conducted pre-burn for 90 minutes before the integrated test run started. Test segments were run in order from high burn to low burn. After 60 minutes operation at high burn, the feed rate was adjusted to 2.15 for medium burn and ran the stove for 120 minutes before the feed rate was set to 1.33 for minimum burn and low burn segment lasted for 180 minutes. Emission and flue gas samplings were conducted over the full length of the integrated test run. Negative filter weights were found on Train 1. This is caused by filter material transferring to the O-ring gasket. Transfer weight can be seen as a positive weight on the O-ring, negative filter weight is added back into the calculation to prevent transfer weight as being counted as emissions. No additional sampling anomalies occurred, this test run was determined to be valid and appropriate.

## Test configurations

Segment	Feed Limit	Temperature Dial	Mode Selector
High Burn	4.17	7.0 (Full Clockwise)	High at Constant Burn
Medium Burn	2.15	1.53	Medium at Contant Burn
Low Burn	1.33	1.0 (Full Conterclockwise)	Low at Constant Burn

	
High Burn (On Screen)	High Burn (On Dials)
	
Medium Burn (On Screen)	Medium Burn (On Dials)
	
Low Burn (On Screen)	Low Burn (On Dials)

## Summary Tables

**Table 1a – Particulate Emissions      Uncorrected<sup>1</sup>**

	First Hour	Integrated
Emission Rate (g/h)	2.63	1.82
Emission Factor (g/dry Kg)	1.08	1.19

**Table 1b – Particulate Emissions      Corrected<sup>2</sup>**

	First Hour	Integrated
Emission Rate (g/h)	2.63	1.90
Emission Factor (g/dry Kg)	1.08	1.24

<sup>1</sup>Uncorrected refers to gravimetric analysis that takes negative filter weights as a negative value in cases where filter residue was transferred to (stuck to) O-ring gaskets to account for the mass transfer.

<sup>2</sup>Corrected refers to gravimetric analysis where negative filter weights are taken as zero, thus reporting a higher value by overreporting of transferred filter material. The uncorrected values were added to this report in response to a request by the US EPA.

**Table 2 – B415.1 Efficiency and CO Emissions**

Burn Rate Segment	Maximum	Medium	Minimum	Integrated
Time (minutes)	60	120	180	360
Burn Rate (dry kg/h)	2.43	1.43	1.29	1.53
Heat Output Rate (Btu/h)	33,252	20,293	18,783	21,790
Efficiency (%, HHV)	73.5	76.1	78.4	76.7
Efficiency (%, LHV)	79.3	82.1	84.5	82.7
CO Emissions (g/MJ Output)	0.16	7.16	5.90	4.87
CO Emissions (g/kg Dry Fuel)	2.25	106.93	90.79	73.35
CO Emissions (g/min)	0.091	2.553	1.948	1.866

**Table 3 – Test Facility Conditions**

Room Temperature (°F)		Barometric Pressure (" Hg)		Air Velocity (ft/min)	
Before	After	Before	After	Before	After
65	65	29.99	30.00	<50	<50

**Table 4 – Dilution Tunnel Gas Measurements and Sampling Data Summary**

Length of Test (min)	Average Dilution Tunnel Gas Measurements		
	Velocity (ft/sec)	Flow Rate (dscf/min)	Temperature (°F)
360	18.54	210.98	76

**Table 5 – Comparison of Three Test Runs**

	Emissions				Burn Rate and Efficiency			
	First Hour		Integrated		Max	Med	Min	Integrated
	g/hr	g/dry kg	g/hr	g/dry kg	dry kg/hr / (%)	dry kg/hr / (%)	dry kg/hr / (%)	dry kg/hr / (%)
Run1*	2.880	1.040	1.517	1.097	2.781 / 74.2%	1.260 / 73.9%	0.999 / 70.3%	1.383 / 72.8%
Run2*	2.050	0.740	1.303	0.927	2.780 / 74.5%	1.240 / 74.1%	1.060 / 72.2%	1.400 / 73.7%
Run3	2.630	1.080	1.820	1.190	2.430 / 73.5%	1.430 / 76.1%	1.290 / 78.4%	1.530 / 76.7%

## Pellet Heater Test Data - ASTM E2779 / ASTM E2515

Run:	3	PM Control Modules:	00335, 00336, 00372
Manufacturer:	Hearth & Home Technologies	Dilution Tunnel MW(dry):	29.00 lb/lb-mole
Model:	P43-C	Dilution Tunnel MW(wet):	28.78 lb/lb-mole
Tracking No.:	2470	Dilution Tunnel H2O:	2.00 percent
Project No.:	0135PS023E REV002	Dilution Tunnel Static:	-0.370 "H <sub>2</sub> O
Test Date:	25-Oct-23	Tunnel Area:	0.1963 ft <sup>2</sup>
Beginning Clock Time:	10:43	Pitot Tube Cp:	0.99
Meter Box Y Factor:	1.016 (1)	Background Sample Volume:	57.274 cubic feet
Barometric Pressure:	Begin 29.99	Middle 29.94	End 30.00 Average 29.98 "Hg

## Pellet Heater Test Data - ASTM E2779 / ASTM E2515

Run:	3	PM Control Modules:	00335, 00336, 00372
Manufacturer:	Hearth & Home Technologies	Dilution Tunnel MW(dry):	29.00 lb/lb-mole
Model:	P43-C	Dilution Tunnel MW(wet):	28.78 lb/lb-mole
Tracking No.:	2470	Dilution Tunnel H2O:	2.00 percent
Project No.:	0135P023E REV002	Dilution Tunnel Static:	-0.370 "H <sub>2</sub> O
Test Date:	25-Oct-23	Tunnel Area:	0.1963 ft <sup>2</sup>
Beginning Clock Time:	10:43	Pitot Tube Cp:	0.99
Meter Box Y Factor:	1.016 (1)	Background Sample Volume:	57.274 cubic feet
Barometric Pressure:	Begin 29.99	Middle 29.94	End 30.00 Average 29.98 "Hg

## Pellet Heater Test Data - ASTM E2779 / ASTM E2515

Run: 3

Manufacturer: Hearth &amp; Home Technologies

High Burn End Time: 60

Model: P43-C

Medium Burn End Time: 180

Tracking No.: 2470

Total Sampling Time: 360 min

Project No.: 0135PS023E REV002

Recording Interval: 1 min

Test Date: 25-Oct-23

Beginning Clock Time: 10:43

Background Sample Volume: 57.274 cubic feet

Meter Box Y Factor: 1.016 (1) 1.011 (2) 1.011 (Amb)

Barometric Pressure: Begin 29.99 Middle 29.94 End 30.00 Average 29.98 "Hg

PM Control Modules: 00335, 00336, 00372

Dilution Tunnel MW(dry): 29.00 lb/lb-mole

Avg. Tunnel Velocity: 18.54 ft/sec.

Dilution Tunnel MW(wet): 28.78 lb/lb-mole

Initial Tunnel Flow: 205.1 scfm

Dilution Tunnel H<sub>2</sub>O: 2.00 percent

Average Tunnel Flow: 211.0 scfm

Dilution Tunnel Static: -0.370 "H<sub>2</sub>O

Post-Test Leak Check (1): 0.002 cfm @ 17 in. Hg

Tunnel Area: 0.1963 ft<sup>2</sup>

Post-Test Leak Check (2): 0.001 cfm @ 19 in. Hg

Pitot Tube Cp: 0.99

Fuel Moisture (%): 4.537 Dry Basis 4.340 Wet Basis

Manufacturer: Hearth & Home Technology Equipment Numbers: \_\_\_\_\_  
 Model: P43-C  
 Tracking No.: 2470  
 Project No.: 0135PS023E  
 Run #: 3 Technician Signature: \_\_\_\_\_  
 Date: 10/25/23

**FIRST HOUR EMISSIONS**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter	<u>F101</u>	<u>124.5</u>	<u>126.4</u>	<u>1.9</u>
B. Rear filter catch	Filter	<u>F102</u>	<u>124.6</u>	<u>124.6</u>	<u>0.0</u>
C. Probe catch*	Probe	<u>82</u>	<u>116286.1</u>	<u>116286.1</u>	<u>0.0</u>
D. Filter seals catch*	Seals	<u>S589</u>	<u>4093.2</u>	<u>4093.4</u>	<u>0.2</u>
			1 <sup>st</sup> hour Sub-Total, mg:		<u>2.1</u>

**TRAIN 1**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				<u>0.0</u>
B. Rear filter catch	Filter				<u>0.0</u>
C. Probe catch*	Probe				<u>0.0</u>
D. Filter seals catch*	Seals				<u>0.0</u>
			Sub-Total, mg:		<u>0.0</u>
			Train 1 Aggregate, mg:		<u>2.1</u>

**TRAIN 2**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				<u>0.0</u>
B. Rear filter catch	Filter				<u>0.0</u>
C. Probe catch*	Probe				<u>0.0</u>
D. Filter seals catch*	Seals				<u>0.0</u>
			Train 2 Aggregate, mg:		<u>0.0</u>

**AMBIENT**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch*	Filter				<u>0.0</u>
			Ambient Aggregate, mg:		<u>0.0</u>

\*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be included in O-ring seal weights.

## ASTM E2779 / ASTM E2515 Emissions Results

Integrated Test Run		
Particulate Emission Rate	#DIV/0!	g/hr
Total Particulate Emissions - $E_T$	#DIV/0!	g
Emissisons Factor	#DIV/0!	g/kg
CSA B415 Efficiency	#REF!	HHV

First Hour Emissions	
Particulate Emission Rate	2.63 g/hr
Total Particulate Emissions - $E_T$	2.63 g
Emissisons Factor	1.08 g/kg

Burn Rate (Composite)	2.43 kg/hr dry
Burn Rate (High)	2.43 kg/hr dry
Burn Rate (Medium)	#VALUE! kg/hr dry
Burn Rate (Low)	#VALUE! kg/hr dry
Average Tunnel Temperature	95 degrees F
Avg. Velocity in Dilution Tunnel - $v_s$	18.70 ft/second
Avg. Flow Rate in Dilution Tunnel - $Q_{sd}$	12381.1 dscf/hour
Average $\Delta p$	0.099 inches H2O
Average $\Delta H$	2.19 inches H2O
Total Time of Test	60 minutes

**ASTM E2779 / ASTM E2515 Emissions Results**

Manufacturer: Hearth & Home Technologies  
 Model: P43-C  
 Project No.: 0135PS023E  
 Tracking No.: 2470  
 Run: 3                              Technician Signature: \_\_\_\_\_  
 Test Date: 10/25/23

	1 <sup>st</sup> Hour	1 <sup>st</sup> Hour	Sample Train 2	Sample	Unit
Total Sample Volume - V <sub>m</sub>	9.577	9.577	0.000	9.417	ft <sup>3</sup>
Average Gas Meter Temperature	65.44	65.44	#DIV/0!	65	°F
Sample Volume (Std. Conditions) - V <sub>mstd</sub>	9.879	9.879	#DIV/0!	9.630	dsf <sup>3</sup>
Total Particulates - m <sub>n</sub>	2.1	2.1	0.0	0	mg
Particulate Concentration - C <sub>r</sub> /C <sub>s</sub>	2.126E-04	2.13E-04	#DIV/0!	0.00E+00	g/dsf <sup>3</sup>
Total Particulate Emissions - E <sub>T</sub>	2.63	2.63	#DIV/0!	0.00	g
Particulate Emission Rate	2.63	2.63	#DIV/0!	0.00	g/hr
Emissisons Factor	1.08	1.08	#DIV/0!		g/kg
Delta from Avg. Particulate Emissions		#DIV/0!	#DIV/0!		g

**Quality Checks**

Filter Temps < 90 °F	OK	Ambient Temp (55-90°F)	OK
Filter Face Velocity	OK	Negative Probe Weight	OK
Leakage Rate	#DIV/0!	Pro-Rate Variation	OK
Medium Burn Rate < 50%	#VALUE!	Dual Train Comparison	#DIV/0!

*Model: P43 - C*

*Project: 0135PS023E REV002*

## **CSA B415.1 Data & Reports**

VERSION: 2.4

4/15/2010

**Manufacturer:** Hearth & Home Technologies  
**Model:** P43-C  
**Date:** 10/25/2023  
**Run:** 3  
**Control #:** 2470

**Test Duration:** 360**Output Category:** Overall**Appliance Type:** Pellet (Cat, Non-Cat, Pellet)

	Temp. Units	F	(F or C)	Default Fuel Values	
	Weight Units	lb	(kg or lb)	D. Fir	Oak
<b>HHV (kJ/kg)</b>		19,810		19,887	
<b>%C</b>		48.73		50	
<b>%H</b>		6.87		6.6	
<b>%O</b>		43.9		42.9	
<b>%Ash</b>		0.5		0.5	

**Fuel Data**

<b>Wood Moisture (% wet):</b>	4.34	<b>HHV</b>	19,620	kJ/kg
<b>Load Weight (lb wet):</b>	21.10	<b>%C</b>	50	
<b>Burn Rate (dry kg/h):</b>	1.53	<b>%H</b>	6.6	
<b>Total Particulate Emissions:</b>	10.92 g	<b>%O</b>	42.85	
		<b>%Ash</b>	0.55	

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Elapsed Time (min)	Fuel Weight Remaining (lb)	Flue Gas Composition (%)			Temp. (°F)	Room Temp
		CO	CO <sub>2</sub>	O <sub>2</sub>

**Date:** 10/25/2023  
**Run:** 3  
**Control #:** 2470

**Test Duration:** 60**Output Category:** High**Appliance Type:** Pellet (Cat, Non-Cat, Pellet)

	Temp. Units	F	(F or C)	Default Fuel Values	
	Weight Units	lb	(kg or lb)	D. Fir	Oak
<b>HHV (kJ/kg)</b>		19,810	19,887		
<b>%C</b>		48.73	50		
<b>%H</b>		6.87	6.6		
<b>%O</b>		43.9	42.9		
<b>%Ash</b>		0.5	0.5		
<b>HHV</b>	19,620	kJ/kg			
<b>%C</b>	50				
<b>%H</b>	6.6				
<b>%O</b>	42.85				
<b>%Ash</b>	0.55				

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Elapsed Time (min)	Fuel Weight Remaining (lb)	Flue Gas Composition (%)			Flue Gas Temp.	Room Temp.

# OMNI-Test Laboratories, Inc.

**Manufacturer:** & Home Technologies

**Technicians:**

**Model:** P43-C

**Date:** 10/25/23

**Run:** 3

**Control #:** 2470

**Test Duration:** 120

**Output Category:** Medium

## Test Results in Accordance with CSA B415.1-10

	<b>HHV Basis</b>	<b>LHV Basis</b>
<b>Overall Efficiency</b>	76.1%	82.1%
<b>Combustion Efficiency</b>	92.6%	92.6%
<b>Heat Transfer Efficiency</b>	82%	88.6%

<b>Output Rate (kJ/h)</b>	21,393	20,293	<b>(Btu/h)</b>
<b>Burn Rate (kg/h)</b>	1.43	3.16	<b>(lb/h)</b>
<b>Input (kJ/h)</b>	28,102	26,657	<b>(Btu/h)</b>

<b>Test Load Weight (dry kg)</b>	2.86	6.31	<b>dry lb</b>
<b>MC wet (%)</b>	4.34		
<b>MC dry (%)</b>	4.54		
<b>Particulate (g )</b>	0		
<b>CO (g)</b>	306		
<b>Test Duration (h)</b>	2.00		

<b>Emissions</b>	<b>Particulate</b>	<b>CO</b>
<b>g/MJ Output</b>	0.00	7.16
<b>g/kg Dry Fuel</b>	0.00	106.93
<b>g/h</b>	0.00	153.15
<b>lb/MM Btu Output</b>	0.00	16.64

<b>Air/Fuel Ratio (A/F)</b>	14.26

**Manufacturer:** Hearth & Home Technologies  
**Model:** P43-C  
**Date:** 10/25/2023  
**Run:** 3  
**Control #:** 2470

**Test Duration:** 180**Output Category:** Low**Appliance Type:** Pellet (Cat, Non-Cat, Pellet)

	Temp. Units	F	(F or C)	Default Fuel Values	
	Weight Units	lb	(kg or lb)	D. Fir	Oak
HHV (kJ/kg)				19,810	19,887
%C				48.73	50
%H				6.87	6.6
%O				43.9	42.9
%Ash				0.5	0.5

**Fuel Data**

Wood Moisture (% wet):	4.34	HHV	19,620	kJ/kg
Load Weight (lb wet):	8.90	%C	50	
Burn Rate (dry kg/h):	1.29	%H	6.6	
Total Particulate Emissions:	0 g	%O	42.85	
		%Ash	0.55	

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Elapsed Time (min)	Fuel Weight Remaining (lb)	Flue Gas Composition (%)			Flue Gas Temp.	Room Temp.
		CO	CO <sub>2</sub>	O <sub>2</sub>

### Pellet Heater Run Notes

#### Air Control Settings

High Burn Rate Target: Maximum

Settings: Feed rate: 4.17 on screen  
Temp Dial: full clockwise, 7 on screen  
Mode selector: high on Constant Burn

Additional Settings Notes:

Medium Burn Rate Target: <50% of Maximum

Settings: Feed rate: 2.15 on screen  
Temp dial: 1.53 on screen  
Mode selector: Medium

Low Burn Rate Target: Feed rate:

Settings: 1.33 on screen  
Temp. dial: full counter-clockwise, 1.00 on screen  
Mode selector: Low on Constant Burn.

#### Preburn Notes

Time	Notes
9:12	Preburn started at high burn setting
10:40	Replaced draft probe

#### Test Notes

Time	Notes
10:43	Started sampling at high burn setting
11:43	Turned high burn to medium burn and stopped 1st hour sampling
13:43	Medium burn changed to low burn
16:43	Test completed.

Pellet Moisture Content: 4.34% WB  
4.54% DB

## 5. Quality Assurance/Quality Control

### **OMNI's Quality Statement**

*OMNI* follows the guidelines of ISO/IEC 17025, “General Requirements for the Competence of Testing and Calibration Laboratories,” and the quality assurance/quality control (QA/QC) procedures found in *OMNI*'s Quality Assurance Manual.

*OMNI*'s scope of accreditation includes, but is not limited to, the following:

- To perform product safety testing by the International Accreditation Service, Inc. (formerly ICBO ES) under accreditation as a testing laboratory designated TL-130.
- To perform product safety testing as a “Certification Organization” by the Standards Council of Canada (SCC).
- Serving as a testing laboratory for the certification of wood heaters by the U.S. Environmental Protection Agency.

This report is issued within the scope of *OMNI*'s accreditation. Accreditation certificates are available upon request.

The manufacturing facilities and quality control system for the production of the P43-C at Hearth and Home Technologies, LLC. were evaluated to determine if sufficient to maintain conformance with *OMNI*'s requirements for product certification. *OMNI* has concluded that the manufacturing facilities, processes, and quality control system are adequate to produce the appliance congruous with the standards and model codes to which it was evaluated.

This report shall not be reproduced, except in full, without the written approval of *OMNI*-Test Laboratories, Inc.

Department: N/A

Make: Rice Lake

Model: 10 Lbs. (Class F)

Serial #: OMNI-00255

Description: Mass

Procedure: DCN 500901

Accuracy: Class F ( $\pm 450\text{mg}$ )

PO: 210356

Order Date: 05/28/2021

Authorized By: N/A

Calibrated on: 07/06/2021

\*Recommended Due: 07/06/2026

Environment: 20 °C 52 % RH

\* As Received: Within Tolerance

\* As Returned: Within Tolerance

Action Taken: Calibrated

Technician: 126

Remarks: \* Many factors may cause the unit to drift out of calibration before the recommended due date. Any reported error is the absolute value between the reference and the unit.  
Uncertainties include the effects of the unit.

This mass meets class F specifications.  
Received/returned without accessories.

This instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual and is traceable to either the SI or to National Institute of Standards and Technology (NIST). The quality system and this certificate are in compliance with ANSI/NCSL Z540-1-1994, ISO/IEC 17025-2017, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless stated in the comments, certificates reflect the "Simple Acceptance Rule" as specified by JCGM 106:2012. Unless otherwise stated, a test accuracy ratio (TAR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without written approval of JJ Calibrations.

THIS CERTIFICATE SHALL NOT BE REPRODUCED, EXCEPT IN FULL, WITHOUT THE APPROVAL OF QUALITY CONTROL SERVICES, INC.

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy. Calibrations comply with ISO/IEC 17025 and ANSI/Z540-1-1994 quality standards.

JJ Calibrations, Inc. certifies that this instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual with the stated procedure using standards that are traceable to the National Institute of Standards and Technology (NIST), or other National Measurement Institutes (NMI's), or by using natural physical constants, intrinsic standards or ratio calibration techniques. The quality system and this certificate are in compliance with ANSI/NCSL Z540-1-1994, ISO/IEC 17025-2005, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless otherwise stated, a test accuracy ratio (TAR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without prior written consent of JJ Calibrations, Inc.

JJ Calibrations, Inc. quality system has been assessed and accredited to ISO/IEC 17025:2005.

Transcat Calibration Laboratories have been audited and found in compliance with ISO/IEC 17025:2017. Accredited calibrations performed within the Lab Scope of Accreditation are indicated by the presence of the Accrediting Body Logo and Certificate Number. Any measurements on an accredited calibration not covered by the Lab Scope of Accreditation are listed in the notes section of the certificate. SCC, NRC, CLAS or ANAB do not guarantee the accuracy of an individual calibration by accredited laboratories.

Transcat calibrations, as applicable, are performed in compliance with the requirements of the Transcat Quality Manual QAC-P01-000, the customer Purchase Order and/or Quality Agreement requirements, ISO 9001:2015, ANSI/NCSL Z540.1-1994 (R2002), and ISO 10012:2003, as applicable. When specified contractually, the requirements of ISO TS16949:2009, 10CFR21, 10CFR50 App. B, ASME NQA-1:2012, and ANSI/NCSL Z540.3-2006 (R2013) are also covered.

Complete records of work performed are maintained by Transcat and are available for inspection. Laboratory standards used in the performance of this calibration are listed on this certificate.

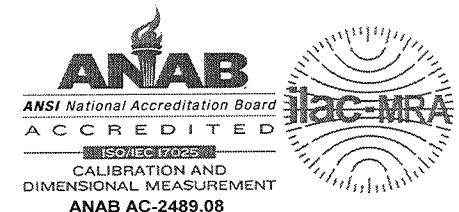

Transcat documents the traceability of measurements to the SI units through the National Institute of Standards and Technology(NIST), or the National Research Council of Canada (NRC), or other national measurement institutes (NMI) that are signatories to the CIPM Mutual Recognition Arrangement, or accepted fundamental and/or natural physical constants, or by the use of specified methods, consensus standards or ratio type measurements. Documentation supporting traceability information is available for review upon written request at a Transcat facility. The measured quantity and the measurement uncertainty are required for further dissemination of traceability.

Uncertainties are reported with a coverage factor k=2, providing a level of confidence of approximately 95%. All calibrations have been performed using processes having a TUR of 4:1 or better (3:1 for mass calibrations), unless otherwise noted. The Test Uncertainty Ratio (TUR) is calculated in accordance with NCSL International RP-18. For mass calibrations: Conventional mass referenced to 8.0 g/cm<sup>3</sup>.

The results in this report relate only to the item calibrated or tested. Recorded calibration data is valid at the time of calibration within the stated uncertainties at the environmental conditions noted. The determination of compliance to the specification is specific to the model/serial no./ID no. referenced above based on the tolerances shown; these tolerances are either the original equipment manufacturers(OEM's) warranted specifications or the client's requested specifications. Any number of factors can cause a unit to drift out of tolerance at any time following its calibration. Limitations on the uses of this instrument are detailed in the OEM's operating instructions. This certificate may not be reproduced except in full, without the written approval of Transcat. Additional information, if applicable may be included on separate report(s).

The use of the standard is defined as: AF - used for as-found readings, AL - used for as-left readings.

#### Environmental Data

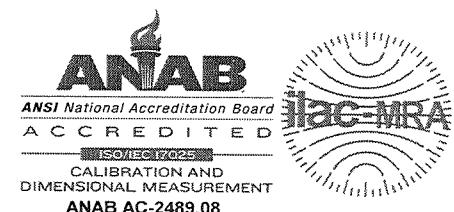

Temperature	Relative Humidity	Temp / RH Asset	Lab Area	Lab Description
68.80°F / 20.44°C	40.20%	19-321	E2C	Echelon II (10 kg)

#### Decision Rule

When compliance statements are present, they are reported without factoring in the effects of uncertainty and comply with the guidelines as follows: The acceptance zone is defined as: less than or equal to the high limit, and/or greater than or equal to the low limit. The rejection zones are defined as greater than the high limit and/or less than the low limit. Single measurement results in the acceptance zone are identified as in-tolerance. Single measurement results in the rejection zone are identified as out-of-tolerance (OOT). When all measurement results are in the acceptance zone for repeated measurements, for the same characteristic, the test is identified as in-tolerance. For repeated characteristic measurements, a single measurement result in the rejection zone, will cause the test to be identified as out-of-tolerance (OOT). Data rejection for cause, (outliers) is permitted after the "Determining and Verifying Out Of Tolerance(OOT) and/or Op Fail Readings" procedure outlined in this document has been completed and the anomalous reading cannot be repeated, and the anomalous reading does not represent the system under test. Statements of conformity are binary.

### Certificate/SO Number: 19-E6W3O-20-1 Revision 0

#### Legend

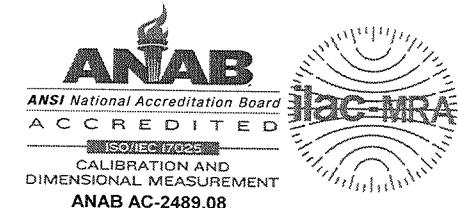

Topic	Description
Accuracy	UUT specification that establishes expected tolerances and a time limit (calibration interval) over which the instrument is expected to hold these tolerances
As Found	Initial measurement results
As Left	Measurement results after adjustment and/or repair
Blank Data Field	Test is not applicable for the UUT
Cal Process Uncertainty (CPU)	The uncertainty of calibration process for the reported measurement result
Calibration Date	Indicates the date that the calibration was completed
Cover Factor (k)	A measure of uncertainty that defines an interval about the measurement result
Due Date	Indicates the end of the calibration cycle as requested by the customer
Issue Date	Indicates the date that the calibration has passed the Data Review Process and was signed by an authorized signatory or the date that a revision to the original certificate has been issued
Low / High Limits	Establishes UUT acceptable performance limits for the test measurement
Measurement Uncertainty	The dispersion of the values attributed to a measured quantity
OOA	Out of Acceptance (#)
OOT	Out of Tolerance (*)
Setpoints	Measurement target values
Traceability	Unbroken chain of comparisons relating an instrument's measurements to a known standard(s)
Traceability Number	Unique identifier(s) used to document traceability of calibration standards
TUR	Test Uncertainty Ratio, ratio of the tolerance or specification of the test measurement in relation to the uncertainty in measurement results
UUT	Unit Under test

Orifice dH@ Deviation (from avg.)	N/A	N/A	N/A

where:

1. Deviation = |Average value for all runs - current run value|
- \*\* 2.  $y = [Vr \times (y \text{ factor (ref)}) \times (Pb + (Pr/13.6)) \times (Td + 460)] / [Vd \times (Pb + (Pd/13.6)) \times (Tr + 460)]$
- \*\* 3.  $dH@ = 0.0317 \times Pd / (Pb \times (Td + 460)) \times [(Tr + 460) \times \text{time}]^2 / Vr$

\* Reference calibration is traceable to NIST through NIST Test # 40674, Kimble ASTM E1272, or NIST traceable laboratory

\*\* Equations come from EPA Method 5

The uncertainty of measurement is ±0.14 ft<sup>3</sup>/min. This is based on the reference standard having a TAR (Test Accuracy Ratio) of at least 4:1.

# DIFFERENTIAL PRESSURE GAUGE CALIBRATION DATA SHEET

Instrument to be calibrated: Pressure Transducer ( $\Delta P$ )

Maximum Range: 0 – 1" H<sub>2</sub>O

ID Number: OMNI-00372

Calibration Instrument: Digital Manometer

ID Number: OMNI-00633

Date: 09/13/2023

By: Tony Tong

**This form is to be used only in conjunction with Standard Procedure C-SPC.**

Range of Calibration Point ("WC")	Digital Manometer Input ("WC")	Pressure Gauge Response ("WC")	Difference   Input – Response	% Error of Full Span*
0-20% Max. Range 0.0 – 0.2	0.104	0.105	0.001	0.1
20-40% Max. Range 0.2 – 0.4	0.252	0.254	0.002	0.2
40-60% Max. Range 0.4 – 0.6	0.519	0.524	0.005	0.5
60-80% Max. Range 0.6 – 0.8	0.662	0.669	0.007	0.7
80-100% Max. Range 0.8 – 1.0	0.957	0.967	0.010	1.0

\*Acceptable tolerance is 4%.

The uncertainty of measurement is  $\pm 0.4"$  WC. This is based on the reference standard having a TAR (Test Accuracy Ratio) of at least 4:1.

This instrument has been calibrated in accordance with the JJ Calibrations Quality Assurance Manual and is traceable to either the SI or to National Institute of Standards and Technology (NIST). The quality system and this certificate are in compliance with ANSI/NCSL Z540-1-1994, ISO/IEC 17025-2017, ISO 10012-1, the ISO 9000 family and QS 9000. The expanded uncertainties of measurements for this calibration are based upon 95% (2 sigma) confidence limits. Unless stated in the comments, certificates reflect the "Simple Acceptance Rule" as specified by JCGM 106:2012. Unless otherwise stated, a test accuracy ratio (TAR) of 4:1, if achievable, is maintained. The results reported herein apply only to the calibration of the item described above. This report may not be reproduced, except in full, without written approval of JJ Calibrations.

Cylinder Style & Outlet: AS CGA 590

Cylinder Pressure and Volume: 1300 psig 99 ft<sup>3</sup>

Certified Concentration			ProSpec EZ Cert
Expiration Date:	04/25/2031	NIST Traceable	
Cylinder Number:	CC241056	Expanded Uncertainty	
16.84 %	Carbon dioxide	± 0.09 %	
4.38 %	Carbon monoxide	± 0.03 %	
16.95 %	Oxygen	± 0.05 %	
Balance	Nitrogen		

### Certification Information:

Certification Date: 04/25/2023

Term: 96 Months

Expiration Date: 04/25/2031

This cylinder was certified according to the 2012 EPA Traceability Protocol, Document #EPA-600/R-12/531, using Procedure G1. Uncertainty above is expressed as absolute expanded uncertainty at a level of confidence of approximately 95% with a coverage factor k = 2. Do Not Use this Standard if Pressure is less than 100 PSIG.

CO responses have been corrected for O2 interference. O2 responses have been corrected for CO2 interference.

THIS CERTIFICATE SHALL NOT BE REPRODUCED WITHOUT THE APPROVAL OF QUALITY CONTROL SERVICES, INC.

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation and readability of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy. Calibrations comply with ISO/IEC 17025 and ANSI/Z540-1-1994 quality standards. Results relate only to the item(s) tested. Unless otherwise noted, statements of conformity do not include measurement

Permanent Information Concerning this Equipment:

Comments/Info Concerning this Calibration:

8/23 - Cleaned, leveled. &amp; adjusted span. RH = 40%

Report prepared/reviewed by: R.B.Date: 8-14-23

Technician: D.Oudeans

Signature: R.B. for D.Oudeans

THIS CERTIFICATE SHALL NOT BE REPRODUCED WITHOUT THE APPROVAL OF QUALITY CONTROL SERVICES, INC.

The uncertainty is calculated according to the ISO Guide to the Expression of Uncertainty in Measurement and includes the uncertainty of standards used combined with the observed standard deviation and readability of the unit under test. The uncertainty is expanded with a k factor of 2 for an approximate 95% level of confidence. Instruments listed above were calibrated using standards traceable to the National Institute of Standards and Technology (NIST). Calibration data reflect results at the time and location of calibration. Calibration data should be reviewed to insure that the instrument is performing to its required accuracy. Calibrations comply with ISO/IEC 17025 and ANSI/Z540-1-1994 quality standards.

Member: National Conference of Standards Laboratories and Weights &amp; Measures

## **Example Calculations**

Calculated from Integrated Test

## Equations and Sample Calculations - ASTM E2779 & E2515

Manufacturer:	Hearth & Home Technologies
Model:	P43-C
Run:	3
Category:	Integrated

Equations used to calculate the parameters listed below are described in this appendix. Sample calculations are provided for each equation. The raw data and printout results from a sample run are also provided for comparison to the sample calculations.

$M_{Bdb}$  - Weight of test fuel burned during test run, dry basis, kg

$M_{BSidb}$  - Weight of test fuel burned during test run segment  $i$ , dry basis, kg

$BR$  - Average dry burn rate over full integrated test run, kg/hr

$BR_{Si}$  - Average dry burn rate over test run segment  $i$ , kg/hr

$V_s$  - Average gas velocity in the dilution tunnel, ft/sec

$Q_{sd}$  - Average gas flow rate in dilution tunnel, dscf/hr

$V_{m(std)}$  - Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf

$m_n$  - Total Particulate Matter Collected, mg

$C_s$  - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dscf

$E_T$  - Total Particulate Emissions, g

$PR$  - Proportional Rate Variation

$PM_R$  - Average particulate emissions for full integrated test run, g/hr

$PM_F$  - Average particulate emission factor for full integrated test run, g/dry kg of fuel burned

## Equations and Sample Calculations - ASTM E2779 & E2515

$M_{Bdb}$  - Weight of test fuel burned during test run, dry basis, kg

ASTM E2779 equation (1)

$$M_{Bdb} = (M_{Swb} - M_{Ewb})(100/(100 + FM))$$

Where,

FM = average fuel moisture of test fuel, % dry basis

$M_{Swb}$  = weight of test fuel in hopper at start of test run, wet basis, kg

$M_{Ewb}$  = weight of test fuel in hopper at end of test run, wet basis, kg

Sample Calculation:

4.34 %

$M_{Swb} = 30.8$  lbs

$M_{Ewb} = 9.7$  lbs

0.4536 = Conversion factor from lbs to kg

$$M_{Bdb} = [(30.8 \times 0.4536) - (9.7 \times 0.4536)] (100/(100 + 4.34))$$

$$M_{Bdb} = 9.17 \text{ kg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$M_{BSidb}$  - Weight of test fuel burned during test run segment  $i$ , dry basis, kg

ASTM E2779 equation (2)

$$M_{BSidb} = (M_{SSiwb} - M_{ESiwb})(100 / (100 + FM))$$

Where,

$M_{SSiwb}$  = weight of test fuel in hopper at start of test run segment  $i$ , wet basis, kg

$M_{ESiwb}$  = weight of test fuel in hopper at end of test run segment  $i$ , wet basis, kg

Sample Calculation (from medium burn rate segment):

$$FM = 4.34 \text{ \%}$$

$$M_{SSiwb} = 25.2 \text{ lbs}$$

$$M_{ESiwb} = 18.6 \text{ lbs}$$

0.4536 = Conversion factor from lbs to kg

$$M_{BSidb} = [(25.2 \times 0.4536) - (18.6 \times 0.4536)] (100 / (100 + 4))$$

$$M_{BSidb} = 2.9 \text{ kg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

BR - Average dry burn rate over full integrated test run, kg/hr

ASTM E2779 equation (3)

$$BR = \frac{60 M_{Bdb}}{\theta}$$

Where,

$\theta$  = Total length of full intergrated test run, min

Sample Calculation:

$$M_{Bdb} = 9.17 \text{ kg}$$

$$\theta = 360 \text{ min}$$

$$BR = \frac{60 \times 9.17}{360}$$

$$BR = 1.53 \text{ kg/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$BR_{Si}$  - Average dry burn rate over test run segment  $i$ , kg/hr

ASTM E2779 equation (4)

$$BR_{Si} = \frac{60 M_{BSidb}}{\theta_{Si}}$$

Where,

$\theta_{Si}$  = Total length of test run segment  $i$ , min

Sample Calculation (from medium burn rate segment):

$$M_{BSidb} = 2.87 \text{ kg}$$

$$\theta = 120 \text{ min}$$

$$BR = \frac{60 \times 2.87}{120}$$

$$BR = 1.43 \text{ kg/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$V_s$  - Average gas velocity in the dilution tunnel, ft/sec

ASTM E2515 equations (9)

$$V_s = F_p \times K_p \times C_P \times \left( \sqrt{\Delta P} \right)_{avg} \times \sqrt{\frac{T_s}{P_s \times M_s}}$$

Where:

$$F_p = \text{djustment factor for center of tunnel pitot tube placement, } F_p = \frac{V_{strav}}{V_{scent}}, \text{ ASTM E2515 Equation (1)}$$

$V_{scent}$  = Dilution tunnel velocity calculated after the multi-point pitot traverse at the center, ft/sec

$V_{strav}$  = Dilution tunnel velocity calculated after the multi-point pitot traverse, ft/sec

$k_p$  = Pitot tube constant, 85.49

$C_p$  = Pitot tube coefficient: 0.99, unitless

$\Delta P^*$  = Velocity pressure in the dilution tunnel, in H<sub>2</sub>O

$T_s$  = Absolute average gas temperature in the dilution tunnel, °R; ( ${}^{\circ}\text{R} = {}^{\circ}\text{F} + 460$ )

$P_s$  = Absolute average gas static pressure in diltuion tunnel,  $= P_{bar} + P_g$ , in Hg

$P_{bar}$  = Barometric pressure at test site, in. Hg

$P_g$  = Static pressure of tunnel, in. H<sub>2</sub>O; (in Hg = in H<sub>2</sub>O/13.6)

$M_s$  = \*\*The dilution tunnel wet molecular weight;  $M_s = 28.78$  assuming a dry weight of 29 lb/lb-mole

Sample calculation:

$$F_p = \frac{18.63}{21.24} = 0.877$$

$$V_s = 0.877 \times 85.49 \times 0.99 \times 0.317 \times \left( \left( \frac{\frac{75.9}{29.98} + \frac{460}{13.6}}{-0.37} \right) \times 28.78 \right)^{1/2}$$

$$V_s = 18.54 \text{ ft/s}$$

\*The ASTM test standard mistakenly has the square root of the average delta p instead of the average of the square root of delta p. The current EPA Method 2 is also incorrect. This was verified by Mike Toney at EPA.

\*\*The ASTM test standard mistakenly identifies  $M_s$  as the dry molecular weight. It should be the wet molecular weight as indicated in EPA Method 2.

## Equations and Sample Calculations - ASTM E2779 & E2515

$Q_{sd}$  - Average gas flow rate in dilution tunnel, dscf/hr

ASTM E2515 equation (3)

$$Q_{sd} = 3600 \times (1 - B_{ws}) \times v_s \times A \times \frac{T_{std}}{T_s} \times \frac{P_s}{P_{std}}$$

Where:

3600	=	Conversion from seconds to hours (ASTM method uses 60 to convert in minutes)
$B_{ws}$	=	Water vapor in gas stream, proportion by volume; assume 2%
A	=	Cross sectional area of dilution tunnel, ft <sup>2</sup>
$T_{std}$	=	Standard absolute temperature, 528 °R
$P_s$	=	Absolute average gas static pressure in dilution tunnel, = $P_{bar} + P_g$ , in Hg
$T_s$	=	Absolute average gas temperature in the dilution tunnel, °R; ( $^{\circ}\text{R} = ^{\circ}\text{F} + 460$ )
$P_{std}$	=	Standard absolute pressure, 29.92 in Hg

Sample calculation:

$$Q_{sd} = 3600 \times (1 - 0.02) \times 18.54 \times 0.1963 \times \frac{528}{75.9 + 460} \times \frac{29.98 + \frac{-0.37}{13.6}}{29.92}$$

$$Q_{sd} = 12658.6 \text{ dscf/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$V_{m(\text{std})}$  - Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf

ASTM E2515 equation (6)

$$V_{m(\text{std})} = K_1 \times V_m \times Y \times \frac{P_{\text{bar}} + \left( \frac{\Delta H}{13.6} \right)}{T_m}$$

Where:

$K_1$  = 17.64 °R/in. Hg

$V_m$  = Volume of gas sample measured at the dry gas meter, dcf

$Y$  = Dry gas meter calibration factor, dimensionless

$P_{\text{bar}}$  = Barometric pressure at the testing site, in. Hg

$\Delta H$  = Average pressure differential across the orifice meter, in. H<sub>2</sub>O

$T_m$  = Absolute average dry gas meter temperature, °R

Sample Calculation:

Using equation for Train 1:

$$V_{m(\text{std})} = 17.64 \times 57.551 \times 1.016 \times \frac{(29.98 + \frac{1.24}{13.6})}{(75.5 + 460)}$$

$$V_{m(\text{std})} = 57.910 \text{ dscf}$$

Using equation for Train 2:

$$V_{m(\text{std})} = 17.64 \times 57.570 \times 1.011 \times \frac{(29.98 + \frac{0.93}{13.6})}{(76.0 + 460)}$$

$$V_{m(\text{std})} = 57.555 \text{ dscf}$$

Using equation for ambient train:

$$V_{m(\text{std})} = 17.64 \times 57.27 \times 1.011 \times \frac{(29.98 + \frac{0.00}{13.6})}{(65.0 + 460)}$$

$$V_{m(\text{std})} = 58.318 \text{ dscf}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$m_n$  - Total Particulate Matter Collected, mg

ASTM E2515 Equation (12)

$$m_n = m_p + m_f + m_g$$

Where:

$m_p$  = mass of particulate matter from probe, mg

$m_f$  = mass of particulate matter from filters, mg

$m_g$  = mass of particulate matter from filter seals, mg

Sample Calculation:

Using equation for Train 1 (first hour):

$$m_n = 0.0 + 0.0 + 0.0$$

$$m_n = 0.0 \text{ mg}$$

Using equation for Train 1 (remainder):

$$m_n = 0.0 + 7.5 + 0.6$$

$$m_n = 8.1 \text{ mg}$$

Train 1 Aggregate = **8.1** mg

Using equation for Train 2:

$$m_n = 0.0 + 8.3 + 0.2$$

$$m_n = 8.5 \text{ mg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$C_s$  - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dscf

ASTM E2515 equation (13)

$$C_s = K_2 \times \frac{m_n}{V_{m(\text{std})}}$$

Where:

$K_2$  = Constant, 0.001 g/mg

$m_n$  = Total mass of particulate matter collected in the sampling train, mg

$V_{m(\text{std})}$  = Volume of gas sampled corrected to dry standard conditions, dscf

Sample calculation:

For Train 1:

$$C_s = 0.001 \times \frac{8.1}{57.91}$$

$$C_s = 1.40E-04 \text{ g/dscf}$$

For Train 2

$$C_s = 0.001 \times \frac{8.5}{57.56}$$

$$C_s = 1.48E-04 \text{ g/dscf}$$

For Ambient Train

$$C_r = 0.001 \times \frac{0.0}{58.32}$$

$$C_r = 0.000000 \text{ g/dscf}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$E_T$  - Total Particulate Emissions, g

ASTM E2515 equation (15)

$$E_T = (C_s - C_r) \times Q_{std} \times \theta$$

Where:

$C_s$  = Concentration of particulate matter in tunnel gas, g/dscf

$C_r$  = Concentration particulate matter room air, g/dscf

$Q_{std}$  = Average dilution tunnel gas flow rate, dscf/hr

$\theta$  = Total time of test run, minutes

Sample calculation:

For Train 1

$$E_T = (\underline{0.000140} - 0.000000) \times \underline{12658.6} \times \underline{360} / 60$$
$$E_T = \underline{10.62} \text{ g}$$

For Train 2

$$E_T = (\underline{0.000148} - 0.000000) \times \underline{12658.6} \times \underline{360} / 60$$
$$E_T = \underline{11.22} \text{ g}$$

Average

$$E = \underline{10.92} \text{ g}$$

Total emission values shall not differ by more than 7.5% from the total average emissions

7.5% of the average = 0.82

Train 1 difference = 0.30

Train 2 difference = 0.30

## Equations and Sample Calculations - ASTM E2779 & E2515

### PR - Proportional Rate Variation

ASTM E2515 equation (16)

$$PR = \left[ \frac{\theta \times V_{mi} \times V_s \times T_m \times T_{si}}{\theta_i \times V_m \times V_{si} \times T_{mi} \times T_s} \right] \times 100$$

Where:

$\theta$  = Total sampling time, min

$\theta_i$  = Length of recording interval, min

$V_{mi}$  = Volume of gas sample measured by the dry gas meter during the "ith" time interval, dcf

$V_m$  = Volume of gas sample as measured by dry gas meter, dcf

$V_{si}$  = Average gas velocity in the dilution tunnel during the "ith" time interval, ft/sec

$V_s$  = Average gas velocity in the dilution tunnel, ft/sec

$T_{mi}$  = Absolute average dry gas meter temperature during the "ith" time interval, °R

$T_m$  = Absolute average dry gas meter temperature, °R

$T_{si}$  = Absolute average gas temperature in the dilution tunnel during the "ith" time interval, °R

$T_s$  = Absolute average gas temperature in the dilution tunnel, °R

Sample calculation (for the first 1 minute interval of Train 1):

$$PR = \left( \frac{360 \times 0.151 \times 18.54 \times (95.0 + 460) \times (75.5 + 460)}{1 \times 57.551 \times 19.03 \times (75.9 + 460) \times (68.0 + 460)} \right) \times 100$$

$$PR = \underline{97} \%$$

## Equations and Sample Calculations - ASTM E2779 & E2515

PM<sub>R</sub> - Average particulate emissions for full integrated test run, g/hr

ASTM E2779 equation (5)

$$PM_R = 60 (E_T / \theta)$$

Where,

E<sub>T</sub> = Total particulate emissions, grams

θ = Total length of full integrated test run, min

Sample Calculation:

$$E_T (\text{Dual train average}) = 10.92 \text{ g}$$

$$\theta = 360 \text{ min}$$

$$PM_R = 60 \times (10.92 / 360)$$

$$PM_R = 1.82 \text{ g/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$PM_F$  - Average particulate emission factor for full integrated test run, g/dry kg of fuel burned

ASTM E2779 equation (6)

$$PM_F = E_T / M_{Bdb}$$

Where,

$E_T$  = Total particulate emissions, grams

$M_{Bdb}$  = Weight of test fuel burned during test run, dry basis, kg

Sample Calculation:

$$E_T \text{ (Dual train average)} = 10.92 \text{ g}$$

$$M_{Bdb} = 9.17 \text{ kg}$$

$$PM_F = 10.92 / 9.17 )$$

$$PM_F = 1.19 \text{ g/kg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

Manufacturer:	Hearth & Home Technologies
Model:	P43-C
Run:	3
Category:	Integrated

Equations used to calculate the parameters listed below are described in this appendix. Sample calculations are provided for each equation. The raw data and printout results from a sample run are also provided for comparison to the sample calculations.

$M_{Bdb}$  - Weight of test fuel burned during test run, dry basis, kg

$M_{BSidb}$  - Weight of test fuel burned during test run segment  $i$ , dry basis, kg

$BR$  - Average dry burn rate over full integrated test run, kg/hr

$BR_{Si}$  - Average dry burn rate over test run segment  $i$ , kg/hr

$V_s$  - Average gas velocity in the dilution tunnel, ft/sec

$Q_{sd}$  - Average gas flow rate in dilution tunnel, dscf/hr

$V_{m(std)}$  - Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf

$m_n$  - Total Particulate Matter Collected, mg

$C_s$  - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dscf

$E_T$  - Total Particulate Emissions, g

$PR$  - Proportional Rate Variation

$PM_R$  - Average particulate emissions for full integrated test run, g/hr

$PM_F$  - Average particulate emission factor for full integrated test run, g/dry kg of fuel burned

## Equations and Sample Calculations - ASTM E2779 & E2515

$M_{Bdb}$  - Weight of test fuel burned during test run, dry basis, kg

ASTM E2779 equation (1)

$$M_{Bdb} = (M_{Swb} - M_{Ewb})(100/(100 + FM))$$

Where,

FM = average fuel moisture of test fuel, % dry basis

$M_{Swb}$  = weight of test fuel in hopper at start of test run, wet basis, kg

$M_{Ewb}$  = weight of test fuel in hopper at end of test run, wet basis, kg

Sample Calculation:

4.34 %

$M_{Swb} = 30.8$  lbs

$M_{Ewb} = 9.7$  lbs

0.4536 = Conversion factor from lbs to kg

$$M_{Bdb} = [(30.8 \times 0.4536) - (9.7 \times 0.4536)] (100/(100 + 4.34))$$

$$M_{Bdb} = 9.17 \text{ kg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$M_{BSidb}$  - Weight of test fuel burned during test run segment  $i$ , dry basis, kg

ASTM E2779 equation (2)

$$M_{BSidb} = (M_{SSiwb} - M_{ESiwb})(100 / (100 + FM))$$

Where,

$M_{SSiwb}$  = weight of test fuel in hopper at start of test run segment  $i$ , wet basis, kg

$M_{ESiwb}$  = weight of test fuel in hopper at end of test run segment  $i$ , wet basis, kg

Sample Calculation (from medium burn rate segment):

$$FM = 4.34 \text{ \%}$$

$$M_{SSiwb} = 25.2 \text{ lbs}$$

$$M_{ESiwb} = 18.6 \text{ lbs}$$

0.4536 = Conversion factor from lbs to kg

$$M_{BSidb} = [(25.2 \times 0.4536) - (18.6 \times 0.4536)] (100 / (100 + 4))$$

$$M_{BSidb} = 2.9 \text{ kg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

BR - Average dry burn rate over full integrated test run, kg/hr

ASTM E2779 equation (3)

$$BR = \frac{60 M_{Bdb}}{\theta}$$

Where,

$\theta$  = Total length of full intergrated test run, min

Sample Calculation:

$$M_{Bdb} = 9.17 \text{ kg}$$

$$\theta = 360 \text{ min}$$

$$BR = \frac{60 \times 9.17}{360}$$

$$BR = 1.53 \text{ kg/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$BR_{Si}$  - Average dry burn rate over test run segment  $i$ , kg/hr

ASTM E2779 equation (4)

$$BR_{Si} = \frac{60 M_{BSidb}}{\theta_{Si}}$$

Where,

$\theta_{Si}$  = Total length of test run segment  $i$ , min

Sample Calculation (from medium burn rate segment):

$$M_{BSidb} = 2.87 \text{ kg}$$

$$\theta = 120 \text{ min}$$

$$BR = \frac{60 \times 2.87}{120}$$

$$BR = 1.43 \text{ kg/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$V_s$  - Average gas velocity in the dilution tunnel, ft/sec

ASTM E2515 equations (9)

$$V_s = F_p \times K_p \times C_P \times \left( \sqrt{\Delta P} \right)_{avg} \times \sqrt{\frac{T_s}{P_s \times M_s}}$$

Where:

$$F_p = \text{djustment factor for center of tunnel pitot tube placement, } F_p = \frac{V_{strav}}{V_{scent}}, \text{ ASTM E2515 Equation (1)}$$

$V_{scent}$  = Dilution tunnel velocity calculated after the multi-point pitot traverse at the center, ft/sec

$V_{strav}$  = Dilution tunnel velocity calculated after the multi-point pitot traverse, ft/sec

$k_p$  = Pitot tube constant, 85.49

$C_p$  = Pitot tube coefficient: 0.99, unitless

$\Delta P^*$  = Velocity pressure in the dilution tunnel, in H<sub>2</sub>O

$T_s$  = Absolute average gas temperature in the dilution tunnel, °R; ( ${}^{\circ}\text{R} = {}^{\circ}\text{F} + 460$ )

$P_s$  = Absolute average gas static pressure in diltuion tunnel,  $= P_{bar} + P_g$ , in Hg

$P_{bar}$  = Barometric pressure at test site, in. Hg

$P_g$  = Static pressure of tunnel, in. H<sub>2</sub>O; (in Hg = in H<sub>2</sub>O/13.6)

$M_s$  = \*\*The dilution tunnel wet molecular weight;  $M_s = 28.78$  assuming a dry weight of 29 lb/lb-mole

Sample calculation:

$$F_p = \frac{18.63}{21.24} = 0.877$$

$$V_s = 0.877 \times 85.49 \times 0.99 \times 0.317 \times \left( \left( \frac{\frac{75.9}{29.98} + \frac{460}{13.6}}{-0.37} \right) \times 28.78 \right)^{1/2}$$

$$V_s = 18.54 \text{ ft/s}$$

\*The ASTM test standard mistakenly has the square root of the average delta p instead of the average of the square root of delta p. The current EPA Method 2 is also incorrect. This was verified by Mike Toney at EPA.

\*\*The ASTM test standard mistakenly identifies  $M_s$  as the dry molecular weight. It should be the wet molecular weight as indicated in EPA Method 2.

## Equations and Sample Calculations - ASTM E2779 & E2515

$Q_{sd}$  - Average gas flow rate in dilution tunnel, dscf/hr

ASTM E2515 equation (3)

$$Q_{sd} = 3600 \times (1 - B_{ws}) \times v_s \times A \times \frac{T_{std}}{T_s} \times \frac{P_s}{P_{std}}$$

Where:

3600	=	Conversion from seconds to hours (ASTM method uses 60 to convert in minutes)
$B_{ws}$	=	Water vapor in gas stream, proportion by volume; assume 2%
A	=	Cross sectional area of dilution tunnel, ft <sup>2</sup>
$T_{std}$	=	Standard absolute temperature, 528 °R
$P_s$	=	Absolute average gas static pressure in dilution tunnel, = $P_{bar} + P_g$ , in Hg
$T_s$	=	Absolute average gas temperature in the dilution tunnel, °R; ( $^{\circ}\text{R} = ^{\circ}\text{F} + 460$ )
$P_{std}$	=	Standard absolute pressure, 29.92 in Hg

Sample calculation:

$$Q_{sd} = 3600 \times (1 - 0.02) \times 18.54 \times 0.1963 \times \frac{528}{75.9 + 460} \times \frac{29.98 + \frac{-0.37}{13.6}}{29.92}$$

$$Q_{sd} = 12658.6 \text{ dscf/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$V_{m(\text{std})}$  - Volume of Gas Sampled Corrected to Dry Standard Conditions, dscf

ASTM E2515 equation (6)

$$V_{m(\text{std})} = K_1 \times V_m \times Y \times \frac{P_{\text{bar}} + \left( \frac{\Delta H}{13.6} \right)}{T_m}$$

Where:

$K_1$  = 17.64 °R/in. Hg

$V_m$  = Volume of gas sample measured at the dry gas meter, dcf

$Y$  = Dry gas meter calibration factor, dimensionless

$P_{\text{bar}}$  = Barometric pressure at the testing site, in. Hg

$\Delta H$  = Average pressure differential across the orifice meter, in. H<sub>2</sub>O

$T_m$  = Absolute average dry gas meter temperature, °R

Sample Calculation:

Using equation for Train 1:

$$V_{m(\text{std})} = 17.64 \times 57.551 \times 1.016 \times \frac{(29.98 + \frac{1.24}{13.6})}{(75.5 + 460)}$$

$$V_{m(\text{std})} = 57.910 \text{ dscf}$$

Using equation for Train 2:

$$V_{m(\text{std})} = 17.64 \times 57.570 \times 1.011 \times \frac{(29.98 + \frac{0.93}{13.6})}{(76.0 + 460)}$$

$$V_{m(\text{std})} = 57.555 \text{ dscf}$$

Using equation for ambient train:

$$V_{m(\text{std})} = 17.64 \times 57.27 \times 1.011 \times \frac{(29.98 + \frac{0.00}{13.6})}{(65.0 + 460)}$$

$$V_{m(\text{std})} = 58.318 \text{ dscf}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$m_n$  - Total Particulate Matter Collected, mg

ASTM E2515 Equation (12)

$$m_n = m_p + m_f + m_g$$

Where:

$m_p$  = mass of particulate matter from probe, mg

$m_f$  = mass of particulate matter from filters, mg

$m_g$  = mass of particulate matter from filter seals, mg

Sample Calculation:

Using equation for Train 1 (first hour):

$$m_n = 0.0 + 0.0 + 0.0$$

$$m_n = 0.0 \text{ mg}$$

Using equation for Train 1 (remainder):

$$m_n = 0.0 + 7.5 + 0.6$$

$$m_n = 8.1 \text{ mg}$$

Train 1 Aggregate = **8.1** mg

Using equation for Train 2:

$$m_n = 0.0 + 8.3 + 0.2$$

$$m_n = 8.5 \text{ mg}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$C_s$  - Concentration of particulate matter in tunnel gas, dry basis, corrected to standard conditions, g/dscf

ASTM E2515 equation (13)

$$C_s = K_2 \times \frac{m_n}{V_{m(\text{std})}}$$

Where:

$K_2$  = Constant, 0.001 g/mg

$m_n$  = Total mass of particulate matter collected in the sampling train, mg

$V_{m(\text{std})}$  = Volume of gas sampled corrected to dry standard conditions, dscf

Sample calculation:

For Train 1:

$$C_s = 0.001 \times \frac{8.1}{57.91}$$

$$C_s = 1.40E-04 \text{ g/dscf}$$

For Train 2

$$C_s = 0.001 \times \frac{8.5}{57.56}$$

$$C_s = 1.48E-04 \text{ g/dscf}$$

For Ambient Train

$$C_r = 0.001 \times \frac{0.0}{58.32}$$

$$C_r = 0.000000 \text{ g/dscf}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

$E_T$  - Total Particulate Emissions, g

ASTM E2515 equation (15)

$$E_T = (C_s - C_r) \times Q_{std} \times \theta$$

Where:

$C_s$  = Concentration of particulate matter in tunnel gas, g/dscf

$C_r$  = Concentration particulate matter room air, g/dscf

$Q_{std}$  = Average dilution tunnel gas flow rate, dscf/hr

$\theta$  = Total time of test run, minutes

Sample calculation:

For Train 1

$$E_T = (\underline{0.000140} - 0.000000) \times \underline{12658.6} \times \underline{360} / 60$$
$$E_T = \underline{10.62} \text{ g}$$

For Train 2

$$E_T = (\underline{0.000148} - 0.000000) \times \underline{12658.6} \times \underline{360} / 60$$
$$E_T = \underline{11.22} \text{ g}$$

Average

$$E = \underline{10.92} \text{ g}$$

Total emission values shall not differ by more than 7.5% from the total average emissions

7.5% of the average = 0.82

Train 1 difference = 0.30

Train 2 difference = 0.30

## Equations and Sample Calculations - ASTM E2779 & E2515

### PR - Proportional Rate Variation

ASTM E2515 equation (16)

$$PR = \left[ \frac{\theta \times V_{mi} \times V_s \times T_m \times T_{si}}{\theta_i \times V_m \times V_{si} \times T_{mi} \times T_s} \right] \times 100$$

Where:

$\theta$  = Total sampling time, min

$\theta_i$  = Length of recording interval, min

$V_{mi}$  = Volume of gas sample measured by the dry gas meter during the "ith" time interval, dcf

$V_m$  = Volume of gas sample as measured by dry gas meter, dcf

$V_{si}$  = Average gas velocity in the dilution tunnel during the "ith" time interval, ft/sec

$V_s$  = Average gas velocity in the dilution tunnel, ft/sec

$T_{mi}$  = Absolute average dry gas meter temperature during the "ith" time interval, °R

$T_m$  = Absolute average dry gas meter temperature, °R

$T_{si}$  = Absolute average gas temperature in the dilution tunnel during the "ith" time interval, °R

$T_s$  = Absolute average gas temperature in the dilution tunnel, °R

Sample calculation (for the first 1 minute interval of Train 1):

$$PR = \left( \frac{360 \times 0.151 \times 18.54 \times (95.0 + 460) \times (75.5 + 460)}{1 \times 57.551 \times 19.03 \times (75.9 + 460) \times (68.0 + 460)} \right) \times 100$$

$$PR = \underline{97} \%$$

## Equations and Sample Calculations - ASTM E2779 & E2515

PM<sub>R</sub> - Average particulate emissions for full integrated test run, g/hr

ASTM E2779 equation (5)

$$PM_R = 60 (E_T / \theta)$$

Where,

E<sub>T</sub> = Total particulate emissions, grams

θ = Total length of full integrated test run, min

Sample Calculation:

$$E_T (\text{Dual train average}) = 10.92 \text{ g}$$

$$\theta = 360 \text{ min}$$

$$PM_R = 60 \times (10.92 / 360)$$

$$PM_R = 1.82 \text{ g/hr}$$

## Equations and Sample Calculations - ASTM E2779 & E2515

PM<sub>F</sub> - Average particulate emission factor for full integrated test run, g/dry kg of fuel burned

ASTM E2779 equation (6)

$$PM_F = E_T / M_{Bdb}$$

Where,

E<sub>T</sub> = Total particulate emissions, grams

M<sub>Bdb</sub> = Weight of test fuel burned during test run, dry basis, kg

Sample Calculation:

$$E_T (\text{Dual train average}) = 10.92 \text{ g}$$

$$M_{Bdb} = 9.17 \text{ kg}$$

$$PM_F = 10.92 / 9.17 )$$

$$PM_F = 1.19 \text{ g/kg}$$

*Project: 0135PS023E REV002*

## **Manufacturer's Quality Assurance Procedure**

## **1) Purpose**

- a)** Ensure that the P43-C manufactured by Hearth & Home Technologies, at the Halifax manufacturing facility, meet the requirements set forth in 40 CFR, part 60. As well as, to fulfill the requirements for a Quality Assurance Plan as set forth in 40 CFR, part 60.533 paragraph "m."

## **2) Scope**

- a)** The Quality Assurance Plan is intended to cover all EPA Certified wood and wood pellet fueled stoves manufactured by Hearth & Home Technologies, at the Halifax manufacturing facility.

## **3) Requirements**

### **a) Inspections for Conformance to Specifications**

- i) The manufacturer shall inspect one stove for every 150 stoves manufactured, within a model line, to verify conformance to the tolerances for all components that affect emissions as listed in 40 CFR Part 60.533 paragraph (k)(2), (3), and (4). The exact serial number of the stove inspected may be within 10 stoves before or 10 stoves after the serial number that occurs exactly on the inspection schedule.

### **b) Inspections for Conformance to Emissions:**

- i) The manufacturer or his authorized representative shall conduct an emissions test on a randomly selected stove from within a model line, certified under 40 CFR Part 60.533, according to the schedule described below.

#### **(1) Schedule**

- (a) Model lines where weighted average certification results were 70% or less than the standard
  - (i) One for every 10,000 stoves manufactured
- (b) Model lines where weighted average certification test results were within 30% of the standard
  - (i) One for every 5,000 stoves manufactured

### **c) Audits of Conformance to the Quality Assurance Plan**

- i) The third-party certifier shall perform at least one unannounced audit of the manufacturer's compliance to the approved Quality Assurance Plan described in this document.
  - (1) The third-party certifier shall submit a copy of the report, fully detailing each audit, to the EPA(Administrator) and the manufacturer within 30 days of the audit.
  - (2) The manufacturer will submit corrective actions and/or responses to any deficiencies, identified in the audit, to the third-party certifier and the EPA(Administrator) within 30 days of receiving each audit report.

### **d) Alternate Schedules for Conformance to Specifications and Emissions**

- i) If two consecutive passing audits are conducted for either Conformance to Specifications or Conformance to Emissions as specified in section 3 paragraph (a) or (b) of this document, the frequency of testing may be modified to skip every other required test.
- ii) If five consecutive passing audits are conducted under the modified schedule described in section 3 paragraph (d)(i) of this document, the frequency of testing shall be further modified to skip three consecutive required tests after each required test is completed.

- iii) Auditing shall resume on the frequency specified in section 3 paragraph (a) or (b), as applicable, if an audit failure occurs under a modified schedule.

#### **Change Record**

<b>Revision</b>	<b>Date</b>	<b>Originator</b>	<b>Description of Change</b>
A	11/13/18	Corie Podschelne	Release

#### **Distribution & Document Control**

The location of Quality systems documents shall be the Hearth & Home Technologies Computer System. Folder location: Halifax (Z:)\Controlled Documents\.... Document and data control shall be through user login. This computer control shall constitute the company-authorized method of document control. The quality assurance manager and /or designated team composite leader shall be the authorized member to maintain the files in the folder.

Printed hard copies printed from the quality systems folder or the Halifax document location folder must be verified with the controlled copy in the computer for -accuracy. Members are responsible for maintaining and ensuring accuracy of printed copies. Any procedure copy printed off the above computer server may be controlled only up to the time of printing. Date and time may be printed on document to indicate control accuracy claim.

[ruN noTES.pdf](#)

---

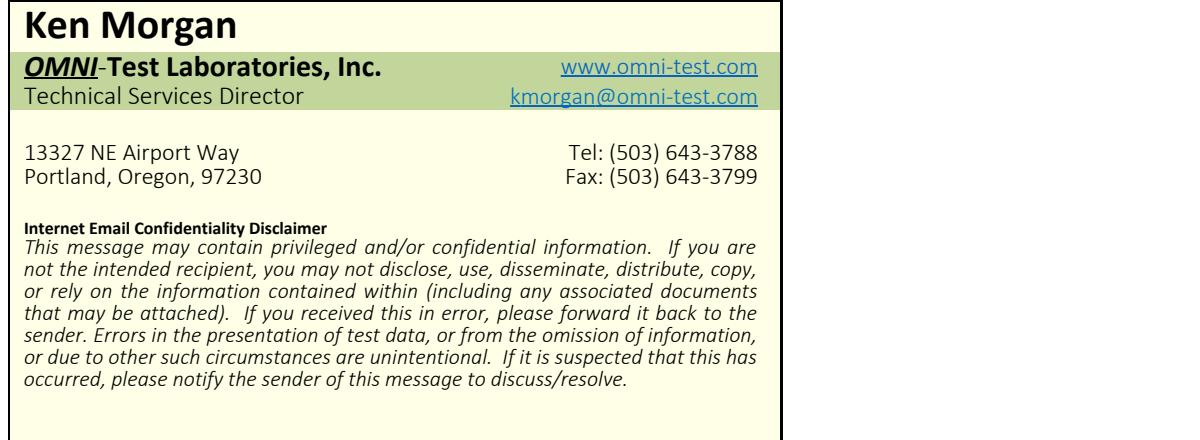

Hello,

This is to inform the EPA, as outlined in §60.535 (a) (2) (VIII) of the CFR, of an additional inadvertent suspension in testing and certification of the Hearth & Home model P43-C. Testing had occurred originally occurred on August 7, 2023, as was indicated in the 30-day notice; however, it was subsequently suspended for reasons stated in the email chain below. Upon resumption of testing, it was learned that a thermal sensor used by the control board in monitoring the flue gas temperature was making erroneous readings and therefore responding in a fashion that was not consistent with the design parameters as intended by the manufacturer, thereby invalidating the integrated test run. The manufacturer is conditioning and supplying a newly selected and inspected specimen (meeting all original design specifications) and testing is to resume on Tuesday, October 24, 2023.

Attached are the data that was generated in the second attempt at testing.

**Note: OMNI is closed on Fridays.**

Regards,

---

**Subject:** Hearth & Home P43-C Suspended Testing

Hello,

This is to inform the EPA, as outlined in §60.535 (a) (2) (VIII) of the CFR, of an inadvertent suspension in testing and certification of the Hearth & Home model P43-C. Testing had occurred on August 7, 2023, as was indicated in the 30-day notice; however, it was subsequently learned by the manufacturer that one of the control parameter settings used was not configured as intended by the manufacturer, thereby invalidating the integrated test run. The manufacturer is fortifying their written instructions and testing is to resume on Monday, August 28, 2023.

**Note: OMNI is closed on Fridays.**

Regards,

**Ken Morgan**

## **6. Appliance Labeling & Owner's Manual**

P1-90-04400-1

Report #/ Raport # 0135PS023E / 0135PS023S  
 Tested to / Testé à: ASTM E 1509-04,  
 ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

Serial No.  
 N° de série:

HF

Room Heater, Pellet Fuel-Burning Type, Also For Use In Mobile Homes. (UM) 84-HUD  
**"PREVENT HOUSE FIRES"** Install and use only in accordance with manufacturers installation and operation instructions.

This wood heater needs periodic inspection and repair for proper operation. Consult the owner's manual for further information. It is against federal regulations to operate this wood heater in a manner inconsistent with the operating instructions in the owner's manual.

Contact local building or fire officials about restrictions and installation inspection in your area.

**WARNING: FOR MANUFACTURED HOMES:** Do not install appliance in a sleeping room. An outside combustion air inlet must be provided. The structural integrity of the manufactured home floor, ceiling and walls must be maintained.

Refer to manufacturer's instructions and local codes for precautions required for passing chimney through a combustible wall or ceiling. Inspect and clean exhaust venting system frequently in accordance with manufacturer's instructions.

Use a 3" or 4" diameter type "L" or "PL" venting system.

Do not connect this unit to a chimney flue servicing another appliance.

Do not obstruct the space beneath the heater.

**FOR USE WITH PELLETIZED WOOD FUEL ONLY.**

Input Rating Max: 6.1 lb. fuel/hr

EPA Certified Emissions: 1.82 g/hr

U.S. Electrical Rating: 115 VAC, 60 Hz, Start 4.2 AMPS, Run 2.8 AMPS

Fuel Type: Wood Pellet.

Route power cord away from unit.

**OPERATE ONLY WITH DOORS CLOSED**

**DANGER:** Risk of Electrical Shock. Disconnect Power Before Servicing Unit.

For Further Instruction, Refer To Installation and Owner's Manual.

Replace glass only with 5mm mirrored ceramic available from your dealer.

**DO NOT REMOVE THIS LABEL / NE PAS ENLEVER CETTE ÉTIQUETTE**

### MODEL / MODÈLE: "P43-C"

Room Heater Pellet Fuel-Burning Type

#### SUITABLE FOR MOBILE-HOME INSTALLATION

This pellet burning appliance has been tested and listed for use in Manufactured Homes In accordance with OAR 814-23-900 through 814-23-909

# HARMAN®

Made in U.S.A. of US and imported parts. / Fabriqué aux États-Unis d'Amérique par des pièces d'origine américaine et pièces importées.

### BARCODE LABEL

#### MINIMUM CLEARANCES TO COMBUSTIBLES/ DISTANCES DE SECURITE PAR RAPPORT AUX MATERIAUX COMBUSTIBLES:

Without Side Shields	With Side Shields
Sans Écrans Latéraux	Avec Écrans Latéraux
Back Wall / Entre Mur Arrière 2'/51mm	2'/51mm
Side Wall / Entre Paroi Latér 16'/406mm	10'/254mm

USA	Canada
Sides/Côtés (A)	6" 152mm
Back/Arrière (B)	6" 152mm
Front/Avant (C)	6" 152mm

Floor Protection Must Be a Non-Combustible Material. Must Also be Place Under Any Horizontal Flue Connector, Extending 2" or 51mm Beyond the Pipe Measurement.

Pour protéger le plancher, il faut sous le pêole un matériau. Qui doit aussi être placé sous les parties horizontales du tuyau de raccord à la cheminée et s'étendre à 51mm ø 2 po. au-delà de la mesure du tuyau.

Chappe-chambre, Pellet à combustibles Type, également pour les maisons mobiles. (UM) 84-HUD  
**"EMPÉCHER MAISON INCENDIES"** Installer et utiliser uniquement en conformité avec les instructions du fabricant d'installation et d'exploitation.

Ce poêle à bois doit inspection périodique et la réparation pour un fonctionnement correct. Consultez le manuel du propriétaire pour plus d'informations. Ce est contre les règlements fédéraux pour faire fonctionner ce poêle à bois d'une manière incompatible avec les instructions d'utilisation dans le manuel du propriétaire. Contactez le service des incendies à propos des restrictions et l'inspection d'installation dans votre région.

**AVERTISSEMENT: POUR MAISONS PRÉFABRIQUÉES:** Ne pas installer l'appareil dans une chambre à coucher. Une entrée d'air de combustion à l'extérieur doit être fournie. L'intégrité structurelle de la maison étage, plafond et murs fabriqués doit être maintenue.

Rapportez-vous aux instructions du fabricant et les codes locaux pour les précautions nécessaires pour faire passer la cheminée à travers un mur ou un plafond combustible. Inspectez et nettoyez système d'évacuation souvent en conformité avec les instructions du fabricant.

Utilisez un "ou 4" Type de diamètre «L» 3 ou le système de ventilation "PL".

Ne pas connecter cet appareil à un conduit de cheminée desservant un autre appareil.

Ne pas obstruer l'espace sous le chauffe-eau.

#### À UTILISER AVEC LA GRANULE DE BOIS SEULEMENT.

Entrée Max Note: £ 6.1 carburant / h

Émissions certifiés EPA: 1,52 g / h

US Note électrique: 115 VAC, 60 Hz, Start 4,2 AMPS, Run 2,8 AMPS

Type de carburant: granulés de bois.

#### Route cordon électrique de l'appareil.

#### Fonctionner uniquement avec les portes fermées

**DANGER:** Risque de choc électrique. Débranchez l'alimentation avant l'Unité des services.

Pour de plus amples instructions, reportez-vous à l'installation et le manuel du propriétaire.

Remplacer le verre seulement avec 5mm miroir en céramique disponibles chez votre revendeur.

Ne ENLEVEZ PAS CETTE ÉTIQUETTE / NE PAS CETTE ÉTIQUETTE enlever

# Owner's Manual

## Care and Operation

**INSTALLER:** Leave this manual with party responsible for use and operation.

**OWNER:** Retain this manual for future reference.

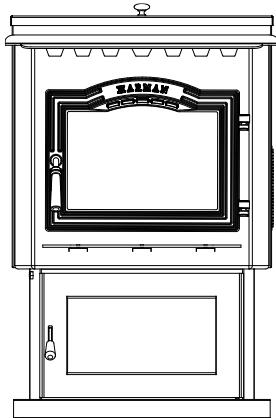

Contact your local dealer with questions on installation, operation or service.

### NOTICE: SAVE THESE INSTRUCTIONS

BUILT TO A STANDARD, NOT A PRICE

**Model(s):**  
**P43-C, P61-C & P68-C**  
**Freestanding Pellet Stove**

### CAUTION

Check building codes prior to installation.

- Installation MUST comply with local, regional, state and national codes and regulations.
- Contact local building or fire officials about restrictions and installation inspection requirements in your area.

### WARNING

Please read this entire manual before installation and use of this pellet fuel-burning room heater. Failure to follow these instructions could result in property damage, bodily injury or even death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- Do not overfire - If any external part starts to glow, you are overfiring. Reduce feed rate. Overfiring will void your warranty.
- Comply with all minimum clearances to combustibles as specified. Failure to comply may cause house fire.

### WARNING

#### HOT SURFACES!

Glass and other surfaces are hot during operation AND cool down.

#### Hot glass will cause burns.

- Do not touch glass until it is cooled
  - NEVER allow children to touch glass
  - Keep children away
  - CAREFULLY SUPERVISE children in same room as stove.
  - Alert children and adults to hazards of high temperatures.
- High temperatures may ignite clothing or other flammable materials.**
- Keep clothing, furniture, draperies and other flammable materials away.

### NOTE

To obtain a French translation of this manual, please contact your dealer or visit [www.harmanstoves.com](http://www.harmanstoves.com)

Pour obtenir une traduction française de ce manuel, s'il vous plaît contacter votre revendeur ou visitez [www.harmanstoves.com](http://www.harmanstoves.com)

Read this manual before operating this appliance.

Please retain this Owner's Manual for future reference.

Read the Installation Manual before making any installation or finishing changes.

## A. Congratulations

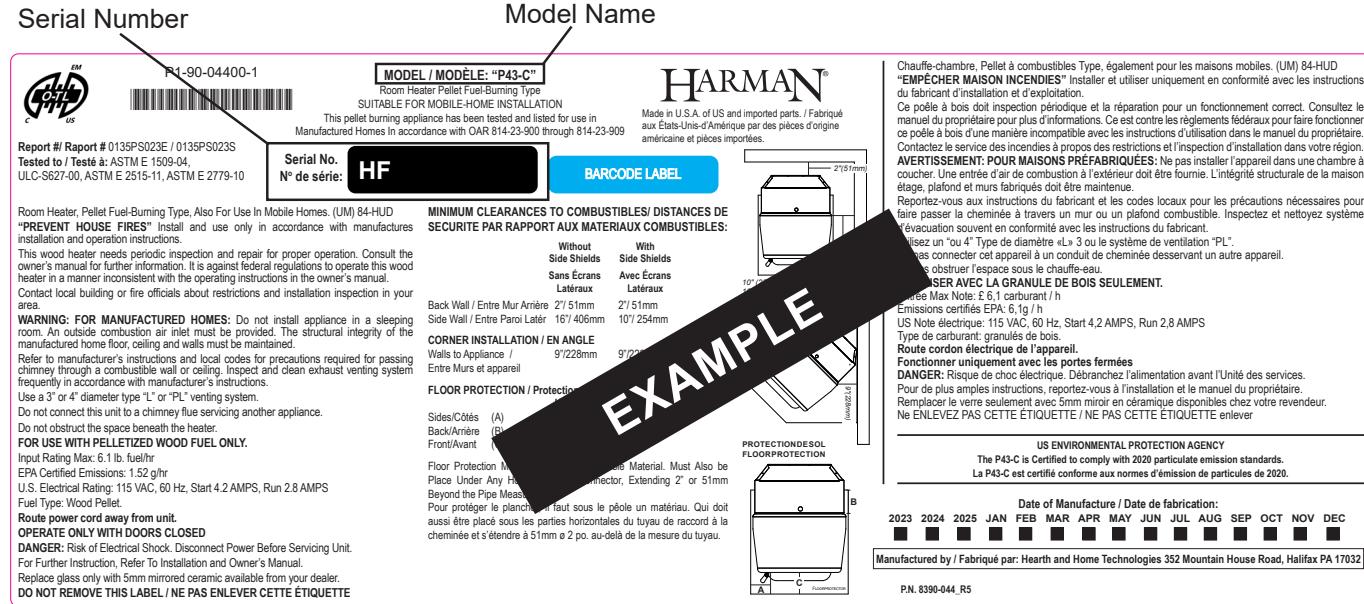

Congratulations on selecting a Harman® Freestanding Pellet Stove. The Harman® P-Series pellet stove you have selected is designed to provide the utmost in safety, reliability, and efficiency.

As the owner of a new pellet stove, you'll want to read and carefully follow all of the instructions contained in this owner's manual. Pay special attention to all cautions and warnings.

This owner's manual should be retained for future reference. We suggest that you keep it with your other important documents and product manuals.

## Listing Label Information/Location

The model information regarding your specific stove can be found on the rating plate usually located in the control area of the stove.

Your new Harman® P-Series Freestanding Pellet Stove will give you years of durable use and trouble-free enjoyment. Welcome to the Harman® family!

**Note: Cast iron is an artisan crafted material, which is made the same way today as nearly 2000 years ago. Due to the intrinsic primitive nature of the casting process, part to part variation is normal and adds to the character of a hand built cast iron appliance**

## ▲ Safety Alert Key:

- **DANGER!** Indicates a hazardous situation which, if not avoided will result in death or serious injury.
- **WARNING!** Indicates a hazardous situation which, if not avoided could result in death or serious injury.
- **CAUTION!** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
- **NOTICE:** Used to address practices not related to personal injury.

## 2 Product Specific and Important Safety Information

### A. Appliance Certification

MODEL:	P43-C Pellet Stove
LABORATORY:	OMNI Test Laboratories, Inc
REPORT NO.	0135PS023E / 0135PS023S
TYPE:	Pellet Fueled/Supplementary For Residential Use
STANDARD(s):	ASTM E 1509-04, ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

MODEL:	P61-C Pellet Stove
LABORATORY:	OMNI Test Laboratories, Inc
REPORT NO.	0135PS022E / 0135PS022S
TYPE:	Pellet Fueled/Supplementary For Residential Use
STANDARD(s):	ASTM E 1509-04, ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

MODEL:	P68-C Pellet Stove
LABORATORY:	OMNI Test Laboratories, Inc
REPORT NO.	0135PS013E / 0135PS013S
TYPE:	Pellet Fueled/Supplementary For Residential Use
STANDARD(s):	ASTM E 1509-04, ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

**NOTE:** This installation must conform with local codes. In the absence of local codes you must comply with the **ASTM E1509-2004, ULC-S627-00, ULC/ORD-C-1482-M1990, (UM) 84-HUD**

The P43-C, P61-C and P68-C is Certified to comply with 2020 particulate emission standards.

### B. Mobile Home Approved

This appliance is approved for mobile home installations when not installed in a sleeping room and when an outside combustion air inlet is provided.

The structural integrity of the mobile home floor, ceiling, and walls must be maintained. The appliance must be properly grounded to the frame of the mobile home and use only listed pellet vent, Class "PL" connector pipe.

A Harman® Outside Air Kit must be installed in a mobile home installation.

#### WARNING

**THE STRUCTURAL INTEGRITY OF THE MANUFACTURED HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED.**

**DO NOT INSTALL IN SLEEPING ROOM.**

### C. Glass Specifications

This appliance is equipped with 5mm mirrored ceramic glass. Replace glass only with 5mm ceramic glass. Please contact your dealer for replacement glass.

### D. Electrical Rating

120 VAC, 60 Hz, Start 4.2 Amps, Run 2.8 Amps

***NOTE: Some generator or battery back-up systems may not be compatible with the micro-processor electronics on this appliance. Please consult the power supply manufacturer for compatible systems.***

### E. California

#### WARNING

This product and the fuels used to operate this product (wood), and the products of combustion of such fuels, can expose you to chemicals including carbon black, which is known to the State of California to cause cancer, and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to: [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)

## F. BTU & Efficiency Specifications

### → P43-C Freestanding Pellet Stove:

EPA Certification Number:	165-18
EPA Certified Emissions:	1.82 g/hr
*LHV Tested Efficiency:	78.5%
**HHV Tested Efficiency:	76.7%
***EPA BTU Output:	19,800 – 35,000
****BTU Input:	17,200 - 43,500
Vent Size:	3 Inch
Hopper Capacity:	50 lbs
Fuel	Wood Pellet

### P61-C Freestanding Pellet Stove:

EPA Certification Number:	177-19
EPA Certified Emissions:	1.5 g/hr
*LHV Tested Efficiency:	85%
**HHV Tested Efficiency:	79%
***EPA BTU Output:	17,100 - 46,800
****BTU Input:	21,400 - 60,700
Vent Size:	3 Inch
Hopper Capacity:	72 lbs
Fuel	Wood Pellet

### P68-C Freestanding Pellet Stove:

EPA Certification Number:	178-19
EPA Certified Emissions:	1.4 g/hr
*LHV Tested Efficiency:	85%
**HHV Tested Efficiency:	79.5%
***EPA BTU Output:	15,900 - 53,100
****BTU Input:	20,200 - 67,600
Vent Size:	3 Inch
Hopper Capacity:	76 lbs
Fuel	Wood Pellet

\* Weighted average LHV efficiency using data collected during EPA emissions test.

\*\*Weighted average HHV efficiency using data collected during EPA emissions test.

\*\*\*A range of BTU outputs based on EPA Default Efficiency and the burn rates from the low and high EPA tests.

\*\*\*\*Based on the maximum feed rate per hour multiplied by approximately 8,600 BTU's which is the average BTU's from a pound of pellets.

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

BTU output will vary, depending on the brand of fuel you use in your appliance. Consult your Harman® dealer for best results.

**WARNING! Risk of Fire!** Hearth & Home Technologies disclaims any responsibility for, and the warranty and agency listing will be voided by the below actions.

#### DO NOT:

- Install or operate damaged appliance
- Modify appliance
- Install other than as instructed by Hearth & Home Technologies
- Operate the appliance without fully assembling all components
- Overfire
- Install any component not approved by Hearth & Home Technologies
- Install parts or components not Listed or approved.
- Disable safety switches

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage.

For assistance or additional information, consult a qualified installer, service agency or your dealer.

**NOTE:** Hearth & Home Technologies, manufacturer of this appliance, reserves the right to alter its products, their specifications and/or price without notice.

Harman® is a registered trademark of Hearth & Home Technologies.

# 3 General Information

## A. Appliance Safety

**WARNING! DO NOT operate stove before reading and understanding operating instructions. Failure to operate stove according to operating instructions could cause fire or injury.**

### WARNING

#### HOT SURFACES!

Glass and other surfaces are hot during operation AND cool down.

#### Hot glass will cause burns.

- **DO NOT** touch glass until it is cooled
- **NEVER** allow children to touch glass
- Keep children away

- CAREFULLY SUPERVISE children in same room as stove.
- Alert children and adults to hazards of high temperatures.

#### High temperatures may ignite clothing or other flammable materials.

- Keep clothing, furniture, draperies and other flammable materials away.

### WARNING

**THIS WOOD HEATER HAS A MANUFACTURER-SET MINIMUM LOW BURN RATE THAT MUST NOT BE ALTERED. IT IS AGAINST FEDERAL REGULATIONS TO ALTER THIS SETTING OR OTHERWISE OPERATE THIS WOOD HEATER IN A MANNER INCONSISTENT WITH OPERATING INSTRUCTIONS IN THIS MANUAL.**

## B. Clear Space

**WARNING! RISK OF FIRE!** Do NOT place combustible objects in front or to the sides of the appliance. High temperatures may ignite clothing, furniture or draperies.

**Mantel:** Avoid placing candles and other heat-sensitive objects on mantel or hearth. Heat may damage these objects.

**NOTICE:** Clearances may only be reduced by means approved by the regulatory authority having jurisdiction.

**WARNING! RISK OF FIRE!** Keep combustible materials, gasoline and other flammable vapors and liquids clear of appliance.

- Do **NOT** store flammable materials in the appliance's vicinity.
- Do **NOT** use gasoline, lantern fuel, kerosene, charcoal lighter fluid or similar liquids to start or "freshen up" a fire in this heater.

Keep all such liquids well away from the heater while it is in use as combustible materials may ignite.

If you expect that small children or vulnerable adults may come into contact with this appliance, the following precautions are recommended:

- Install a physical barrier such as:
  - A decorative fire screen.
  - Adjustable safety gate.
- Install a switch lock or a wall/remote control with child protection lockout feature.
- Keep remote controls out of reach of children.
- Never leave children alone near a hot stove, whether operating or cooling down.
- Teach children to NEVER touch the stove.
- Consider not using the stove when children will be present.
- Use only specified components as replacement parts. Other components may not allow your stove to operate as it was intended.

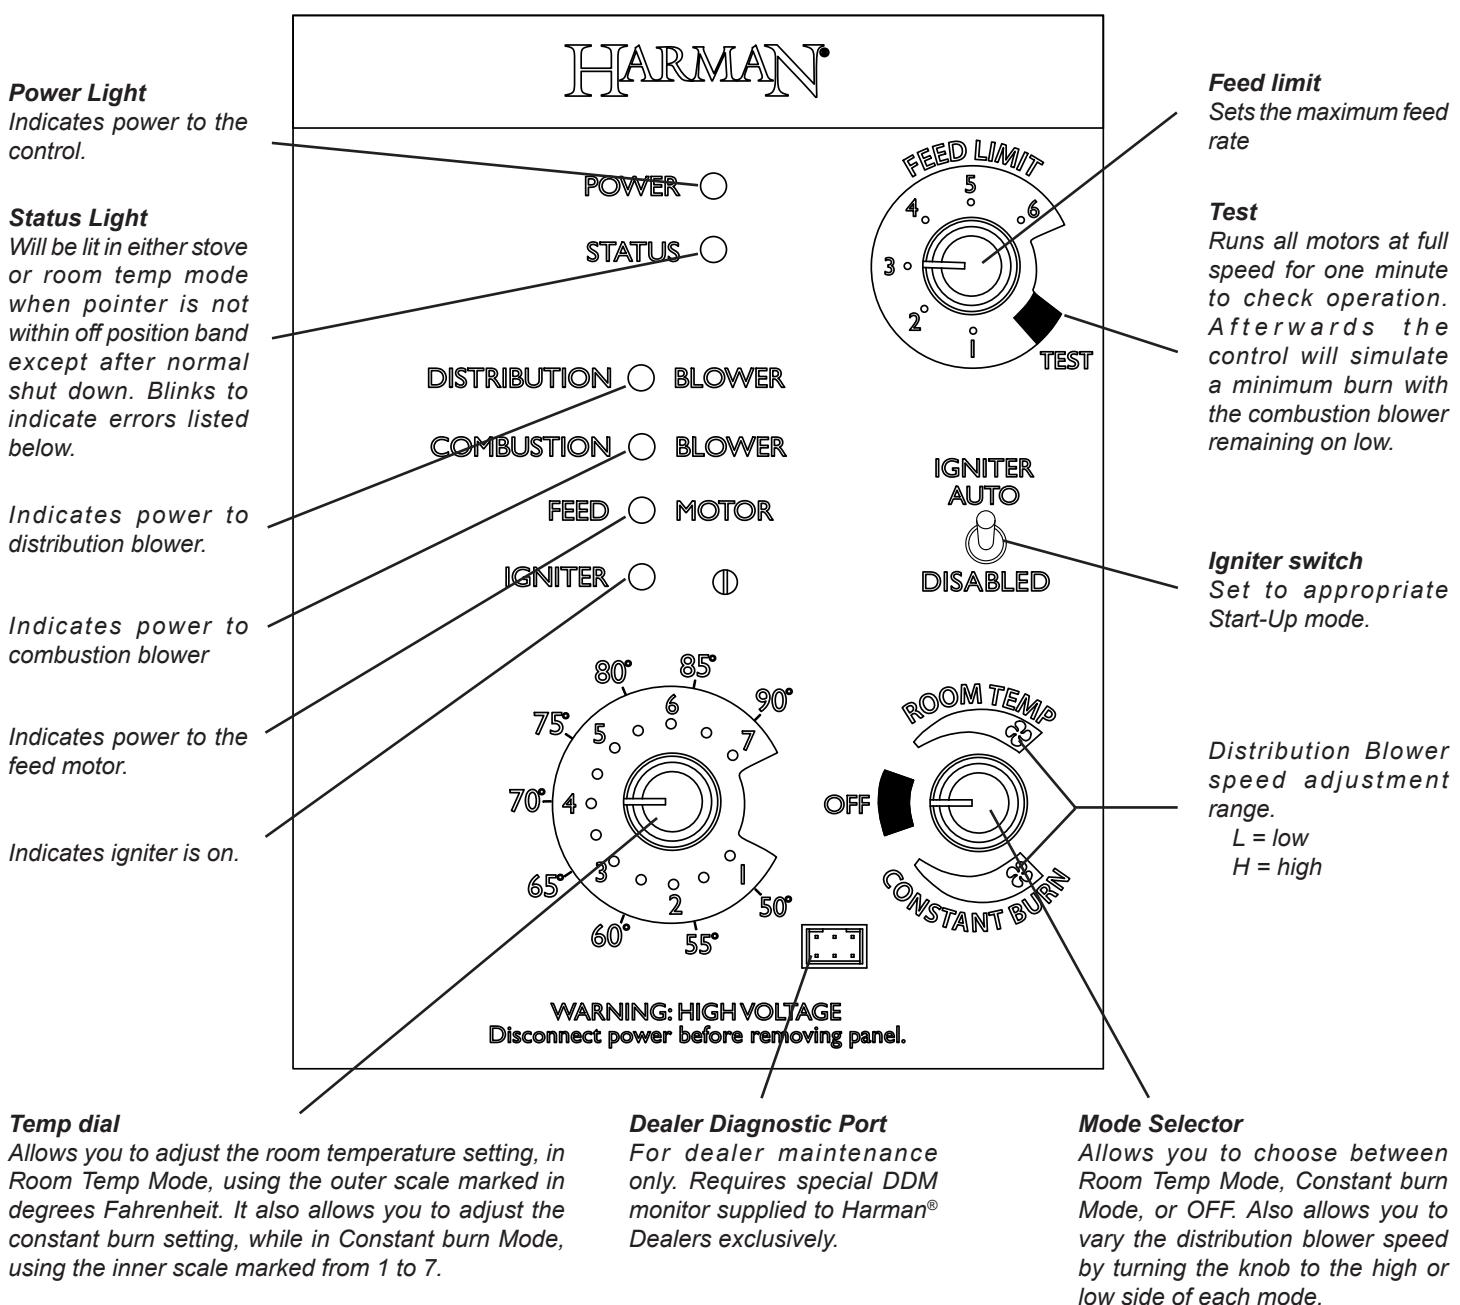

Contact your dealer for more information, or visit: [www.hcba.org/safety-information](http://www.hcba.org/safety-information).

To prevent unintended operation when not using your stove for an extended period of time (summer months, vacations, trips, etc):

- Unplug stove from receptacle.

Connect the power cord to a 120 VAC, 60 Hz grounded receptacle. (A surge protector is recommended to protect the circuit board.) Be sure the polarity of the outlet the stove is plugged into is correct.

## C. Control Explanation

## D. Fuel Specifications

### Fuel and Fuel Storage

Pellet fuel quality can fluctuate from manufacturer to manufacturer, and even from bag to bag.

Hearth & Home Technologies recommends using only fuel that is certified by the Pellet Fuels Institute (PFI).

#### Fuel Material

- Made from sawdust and/or other wood by-products
- Source material typically determines ash content

#### Higher Ash Content Material

- Hardwoods with high mineral content
- Bark and leaves as source material
- “Standard” grade pellets

#### Lower Ash Content Material

- Softwood; pine, fir, etc.
- Materials with lower mineral content
- “Premium” grade pellets

#### ***CAUTION! Do not burn fuel that contains an additive.***

- May cause hopper fire
- Damage to product may result

Read the list of ingredients on the packaging.

#### Clinkers

Minerals and other non-combustible materials, like sand, will turn into a hard glass-like substance when heated.

Trees from different areas will vary in mineral content. For this reason, some fuels will produce more clinkers than others.

#### Moisture

Always burn dry fuel. Burning fuel with high moisture content takes energy to dry and tends to cool the appliance thus, robbing heat from your home. Damp pellet fuel could turn back into sawdust which does not flow properly through the feed system.

#### Size

- Pellets are either 1/4 inch or 5/16 inch (6-8mm) in diameter
- Length should be no more than 1-1/2 inches (38mm)
- Pellet length can vary from lot to lot from the same manufacturer.

#### Performance

- Higher ash content requires more frequent maintenance.
- “Premium” grade pellets will produce the highest heat output.
- Burning pellets longer than 1-1/2 inches (38mm) can cause inconsistent feeding and/or ignition.

We recommend that you buy fuel in multi-ton lots whenever possible. However, we do recommend trying different brands prior to purchasing multi-ton lots, to ensure your satisfaction.

***CAUTION! Tested and approved for use with wood pellets ONLY. Burning of any other fuel will void your warranty.***

#### Storage

- Wood pellets should be left in their original sealed bag until ready to use, to prevent moisture.
- Do not store fuel within the specified clearance areas, or in a location that will interfere with routine cleaning and maintenance procedures.

#### **CAUTION**

Tested and approved for use with wood pellets ONLY. Burning of any other fuel will void your warranty.

#### **NOTICE**

Hearth & Home Technologies is not responsible for stove performance or extra maintenance required as a result of using fuel with higher ash or mineral content.

## E. General Operating Information

### 1. Room Sensor Calls For Heat

The appliance is like most modern furnaces; when the room sensor calls for heat, your appliance will automatically light and deliver heat.

When the room is up to temperature and the room sensor is satisfied, the appliance will shut down.

### 2. Heat Output Controls

The appliance will turn on and off as the room sensor demands. When the room sensor calls for heat, the appliance will always start up on High. After burning approximately 7-10 minutes, the appliance will then burn at the rate at which it was originally set. If the appliance is set at one of the lower settings, it will run quieter but take longer to heat up an area than if it were set at a higher burn rate.

Regardless of the burn rate, when the area is warm enough to satisfy the room sensor, the appliance will shut off.

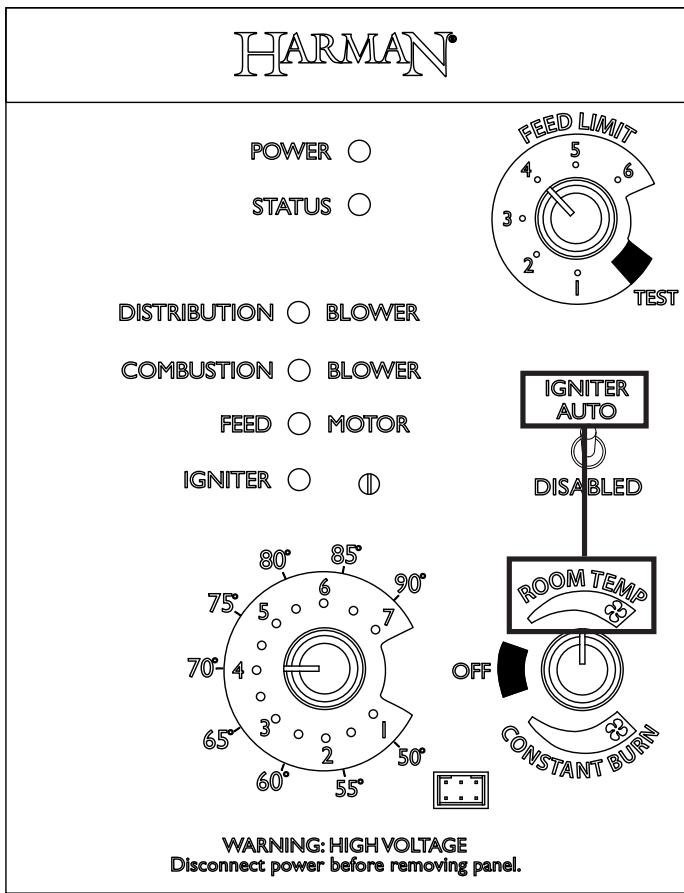

Figure 3.1

## WARNING

### Fire Hazard

- Keep combustible materials, gasoline and other flammable vapors and liquids clear of appliance.
- Do NOT store flammable materials in the appliance's vicinity.
  - NEVER USE GASOLINE, GASOLINE-TYPE LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER FLUID, OR SIMILAR LIQUIDS TO START OR "FRESHEN UP" A FIRE IN THIS HEATER. KEEP ALL SUCH LIQUIDS WELL AWAY FROM THE HEATER WHILE IT IS IN USE.
  - DO NOT BURN GARBAGE OR FLAMMABLE FLUIDS SUCH AS GASOLINE, NAPHTHA OR ENGINE OIL.
  - DO NOT USE CHEMICALS OR FLUIDS TO START THE FIRE.
- Combustible materials may ignite.

# 4 Operating Instructions

## A. Starting Your First Fire

1. A room sensor is required for proper operation of this appliance in "Room Temp" mode. At this time, fill the hopper with pellets, insure the control is set to "OFF". Figure 4.1. Plug the power cord into a properly grounded, nearby outlet.
2. Once power is present, the unit it will run through a quick diagnostics test to insure the control is operating properly. This is normal.
3. For your first fire it may be necessary to purge the auger system by putting the feed limit knob to "Test" prior to starting the unit. Figure 4.2. This insures that plenty of fuel enters the burn pot for proper ignition.
4. Flip toggle switch to desired mode "Auto or Disabled". Figure 4.3. Set feed limit knob to desired setting and turn mode dial to "Room Temp" or "Constant burn" Figure 4.4.  
**Note:** Feed rate of #4 is a good starting point. Adjustments may need to be made depending on fuel quality and/or heat output desired.
5. The fuel feed system and the igniter should now be on.
6. Once the appliance has ignited, let it burn for approximately 7-10 minutes. After this time, the igniter light should turn off and the unit should begin to operate per the settings at the control.

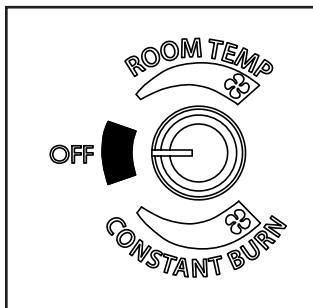

Figure 4.1

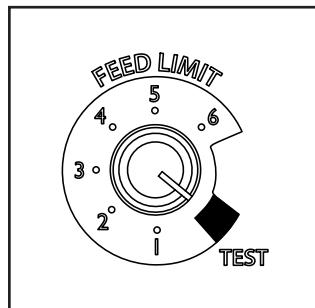

Figure 4.2

Figure 4.3

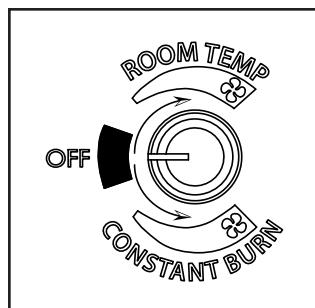

Figure 4.4

## B. Fire Characteristics

A properly adjusted fire has a medium active flame pattern that extends out of the burn pot approximately 6 inches (152mm).

## C. Feed Limit Instructions

The Feed Limit control is factory set at #4, and should be adequate for most fuels.

However, if the flame height is too high or too low, you will need to adjust the Feed Limit. Wait until the appliance has been burning for 15 minutes before making your adjustments and allow 15 minutes for feed adjustment to take effect.

### CAUTION

Odors and vapors released during initial operation.

- Curing of high temperature paint.
- Open windows for air circulation.

Odors may be irritating to sensitive individuals.

## D. Ignition Cycles

1. At the beginning of each ignition cycle, it is normal to see some smoke in the firebox. The smoke will stop once the fire starts.
2. The distribution blower will automatically turn on after your appliance has reached the set temperature.

This blower transfers heat from your appliance into the room, and will continue to run in "constant burn" mode at the set speed you have the control knob at. In "room temp" mode however, the blower will turn on and off in accordance to what temperature the room sensor is reading. When the room sensor is satisfied the blower will shut down until the room sensor sees a demand for heat.

3. Occasionally the appliance may run out of fuel and shut itself down. When this happens, the unit will need to be turned to the off position and restarted.

If needed, follow the instructions in Section A "Starting Your First Fire".

## WARNING

### Fire Risk

Do NOT operate appliance:

- With appliance door open.
- Burnpot floor open.
- Cleaning slide plates open.

### Do NOT store fuel:

- Closer than required clearances to combustibles to appliance
- Within space required for loading or ash removal.

## E. Automatic Ignition

Adjust Feed Limit. If this is your first fire or you are trying different pellets, set the feed limit to #4, Figure 4.5 This is a conservative number and will probably need to be increased. After you know a Feed Limit setting that works well, use that setting. Remember, if your feed rate is too high you may waste fuel.

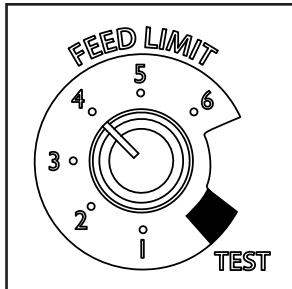

Figure 4.5

Setting the feed limit # for maximum burn: With the unit burning in "AUTO", turn to "Constant Burn" and put the fan on "H". Set the Temperature Dial to #7. Allow the unit to burn for about 30 minutes and check ash on front of burn pot. Figure 4.6. If the ash line is larger than 1", turn the feed limit from #4 to #5. Allow another 30 minutes of burn time and check again. If, at #6 setting, a 1" or less ash bed is not obtainable, it is not a problem. The 1" ash bed is only at maximum burn rate and during normal operation, the ash bed will be larger.

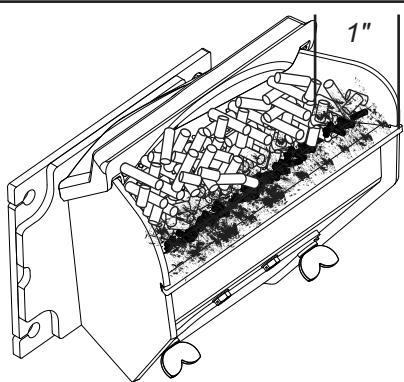

Figure 4.6

**Note:** The firebox low pressure switch will not allow the auger motor or the igniter element to operate if the view door is open.

## Igniter Switch to "AUTO" (up position)

Make sure the unit is plugged into a properly grounded, 120 VAC, 60 Hz electrical source. The power light should be the only light lit.

**Note: Be sure there is no fuel or other combustibles in the ash pan prior to lighting.**

1. Turn Mode Selector to "OFF".
2. Fill hopper with pellets.
3. Clean burn pot with scraper, if necessary.
4. If starting after an empty hopper, turn Feed Limit to "TEST" (for one 60 second cycle). This will flow pellets into the auger tube and also allow you to check the motors for operation.

**NOTE: The auger motor will not operate with the view door open.**

5. Turn Feed Limit to #4.
6. Flip the Igniter Switch up into the "AUTO" position.
7. Turn the Temperature Dial to the desired room temperature.
8. Turn Mode Selector to Room Temperature or Constant Burn mode.
9. Fill hopper with pellets and remove ashes as required. Keep the hopper lid and firebox doors closed while in operation. Maintain door seals in good condition. Failure to do so will affect operation of the appliance and may permit escape of smoke or gases into the living space causing smoke detectors to sound.

## WARNING

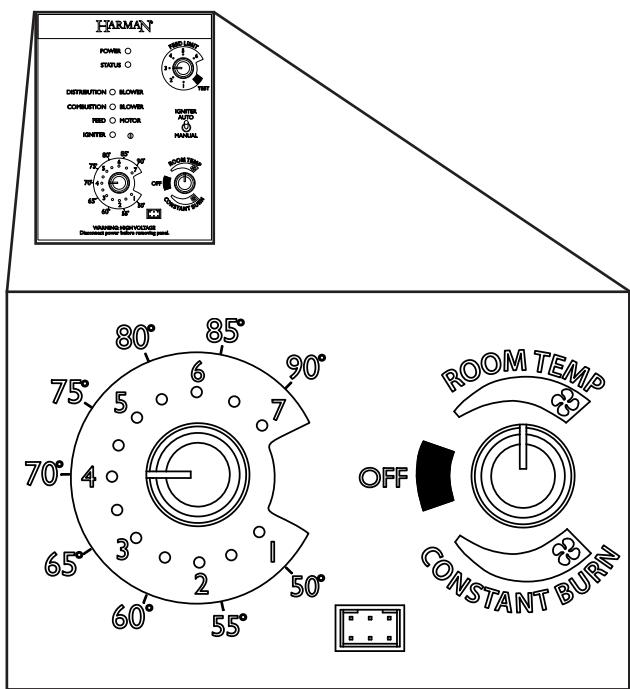

**BURNING GARBAGE, USE OF IMPROPER FUELS, FIRESTARTERS OR ALTERING THE STOVE FOR HIGHER HEAT OUTPUT MAY CAUSE DAMAGE TO THE STOVE AND COULD RESULT IN A HOUSE FIRE. USE ONLY APPROVED FUELS AND FOLLOW ONLY THESE OPERATION GUIDELINES.**

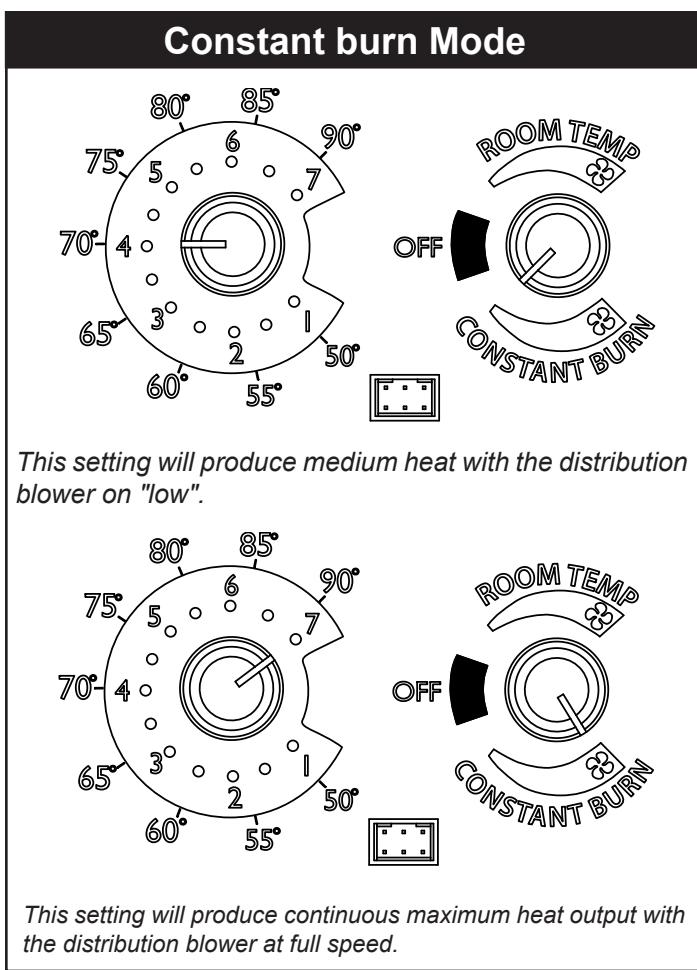

## WARNING

**NEVER USE GASOLINE, GASOLINE-TYPE LANTERN FUEL, KEROSENE, CHARCOAL LIGHTER FLUID, OR SIMILAR LIQUIDS TO START OR 'FRESHEN UP' A FIRE IN THIS HEATER. KEEP ALL SUCH LIQUIDS WELL AWAY FROM THE HEATER, WHILE IN USE.**

## E. Automatic Ignition (Continued)

**Room Temperature Mode:** This setting will produce a room temperature of 70 degrees with the distribution blower at medium speed.

The P-Series Pellet Stove is more than just automatic ignition, it is also automatic temperature control. The automatic system will allow the fire size to be adjusted to match the heating needs and even put the fire out if necessary. If heat is needed after the fire is out, the P-Series Pellet Stove will automatically re-ignite and adjust the fire size to match the heating need. The totally automatic room sensor mode is recommended because of its efficiency. The unit can be switched between "AUTO" and "DISABLED" at any time during operation.

#### Igniter switch to "AUTO"

#### Room Temperature Mode

In "Room Temp Mode" heat output is controlled automatically by the Room Sensing Probe. When the Room Sensing Probe calls for heat, the stove will increase output. When the Room Sensing Probe is getting close to the set temperature, the stove will begin to level off output and keep the fire burning at just the right temperature to maintain that setting.

High output is determined by the Feed Limit setting. This setting, generally on #4, can be increased if higher burn rates are necessary (Figure 4.6). The unit's maximum burn rate should not create less than 1" of ash on the burn pot front edge (Figure 4.7). Overfeeding is not a safety concern, but fuel may be wasted if unburned pellets fall into the ash pan.

In "Room Temp Mode" a constant fuel consumption rate is sacrificed for exact room temperature. Therefore, as it gets colder more pellets will be burned automatically.

The distribution blower speed will vary according to the position of the mode selector pointer, and fire size.

#### Igniter switch to "AUTO"

#### Constant Burn Mode

This allows for automatic ignition upon start-up only. The unit can then be set at any desired setting. The heat output and fuel consumption will remain constant regardless of room temperature. The unit's maximum feed rate should not create less than 1" of ash on the burn pot front edge. Figure 4.7.

The unit's low burn or maintenance setting is as low as it will go. It will not go out unless it runs out of fuel or is turned off.

#### Shut-Down Procedure

To kill the fire or stop burning the stove, turn the Mode Selector to "OFF". This will cause the fire to diminish and burn out. When the fire burns out and the stove cools down everything will stop.

If you pull the plug to shut down the stove, all motors will stop. This may cause incomplete combustion and smoke in the firebox. If the load door is opened, the smoke may escape.

The best way to shut down the stove is simply let it run out of pellets, then the stove will shut down automatically.

# 5 Maintenance & Service

When properly maintained, your stove will give you many years of trouble-free service. **Contact your dealer** to answer questions regarding proper operation, trouble-shooting and service for your appliance. Visit [www.harmanstoves.com](http://www.harmanstoves.com) to find a dealer. We recommend annual service by a qualified service technician.

**Note:** Do not use a household vacuum to clean the stove. We recommend that you use a shop vacuum that is equipped with a fine dust filter called a HEPA filter or a vacuum specially made for fly ash and soot. **USING A VACUUM WHICH IS NOT EQUIPPED WITH A FINE DUST FILTER WILL BLOW FLY ASH AND SOOT OUT INTO THE ROOM.**

**NOTE:** THE STOVE MUST BE COMPLETELY OUT BEFORE YOU VACUUM THE STOVE. LIVE PELLET EMBERS, IF SUCKED INTO THE VACUUM, WILL LIGHT THE VACUUM ON FIRE AND MAY ULTIMATELY CAUSE A HOUSE FIRE.

## A. Proper Shutdown Procedure

<b>CAUTION</b>	
 <b>Shock and Smoke Hazard</b> <ul style="list-style-type: none"><li>Turn unit to the off position, let appliance completely cool and combustion blower must be off. Now you can unplug appliance before servicing.</li><li>Smoke spillage into room can occur if appliance is not cool before unplugging.</li><li>Risk of shock if appliance not unplugged before servicing appliance.</li></ul>	

Follow the detailed instructions found in this section for each step listed in the chart below.

## B. General Maintenance

### Types of Fuel

The type of fuel you are burning will dictate how often you have to clean your burnpot.

If the fuel you are burning has a high dirt or ash content , it may be necessary to clean the burnpot more than once a day.

Dirty fuel will cause clinkers to form in the burnpot. A clinker is formed when dirt, ash or a non-burnable substance is heated to 2000°F (1093°C) and becomes glass-like.

## C. Quick Reference Maintenance Chart

Frequency	Cleaning Procedure	Safety Measures	Tips
Daily	Scrape Burn pot	Wear flame resistant gloves <sup>3</sup>	Vigorous, strong scraping specifically near neck of burn pot. Scrape every time you add pellets or at least every 3 bags of fuel. <sup>2</sup>
Weekly	Empty Ash Pan	Wear protective gloves. <sup>1</sup> Put ashes into a steel non-combustible container with tight fitting lid outside.	Unit does not need to be turned off. Reduce to low burn during removal.
	Clean the Glass	Stove must be turned off and cold.	
Monthly	Scrape & Vacuum Heat Exchanger	Stove must be turned off and cold.	Use provided scraper. Scrape back and sides of firebox.
	Brush & vacuum the distribution fan	Stove must be turned off, cold and unplugged from power supply.	Use provided paint brush. This should be done approximately every 25 bags. <sup>2</sup>
	Inspect Hopper lid gasket for damage		Replace gasketing if frays, tears or other visible damage to gasket. This should be done approximately every 50 bags. <sup>2</sup>
	Clean Igniter	Stove must be turned off, cold and unplugged from power supply. Wear protective gloves. <sup>1</sup> Put ashes into a steel non-combustible container with tight fitting lid outside.	Use provided paint brush. Vacuum loose ash from around igniter and inside burn pot.
<b>Stove MUST be turned off, cold and unplugged from power supply for Yearly Cleaning.</b>			
Yearly <sup>4</sup>	Brush & vacuum the combustion fan and venting/exhaust path	Wear protective gloves. <sup>1</sup> Put ashes into a steel non-combustible container with tight fitting lid outside.	Use provided paint brush to brush fan blades. *Use flue brush to clean venting being careful not to damage the ESP. <sup>2</sup>
	Inspect door gasket		Replace gasketing if frays, tears or other visible damage to gasket.
	Brush & vacuum venting system	Wear protective gloves. <sup>1</sup> Put ashes into a steel non-combustible container with tight fitting lid outside.	

\* A flue brush of appropriate size and length may need to be purchased for proper maintenance.

1. Protective gloves will help prevent skin abrasion while working on steel surfaces.
2. Frequency of cleaning depends largely on fuel type. Lower quality pellets require most frequent cleaning.
3. Flame resistant gloves will help protect your skin from potential contact with heat or flames.
4. Yearly cleaning is also known as a Total Clean. This requires completing all the Daily, Weekly, Monthly and Yearly maintenance mentioned. This should be done before you begin burning the unit each heating season.

## D. Glass Maintenance

The glass used in your stove is manufactured to exact standards to withstand the high heat of the fire, but like all glass, it must be treated with common sense and care. Never slam the door shut or strike the glass with a heavy object. If the glass is broken or damaged, do not operate the stove until it has been replaced.

### Glass - Replacement

If the stove's glass is cracked or broken, you must replace it before operating your stove. Remove pieces carefully. Replace glass only with Harman® replacement glass; **do not use substitutes**.

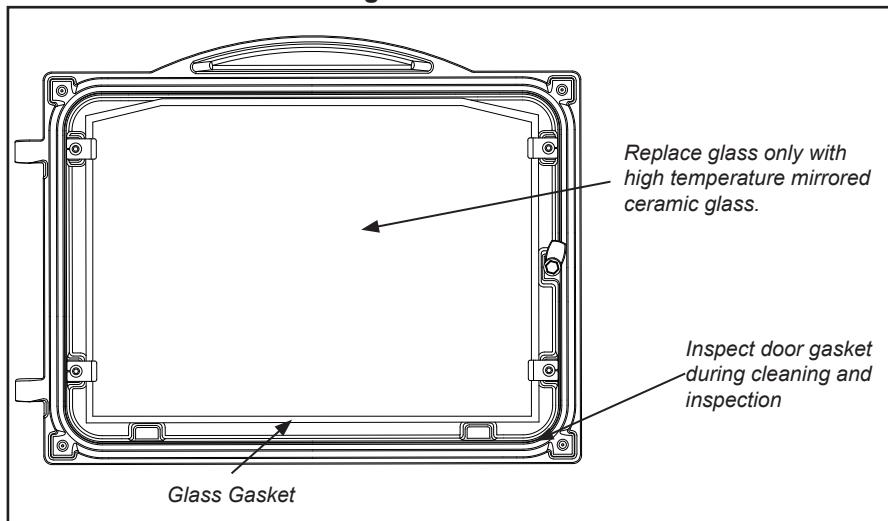

Carefully remove damaged glass, gasket material, and hold down clips (set aside).

Install the self adhesive 1/4" gasket material around the front face of the glass. Set the glass panel and gasket gently onto the door. Install the hold down clips and tighten with bolts.

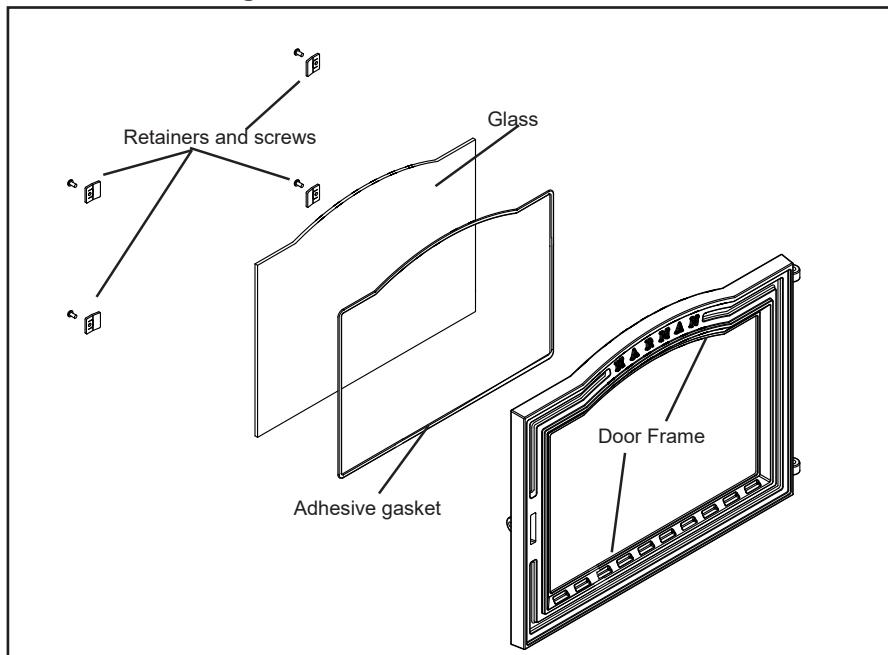

### Glass - Cleaning

Sometimes it will be necessary to clean accumulated ash from the glass surface; allowing this ash to remain on the glass for long periods can result in "etching" due to the acidity of the ash. Never clean the glass while it is hot, and **do not** use abrasive substances. Wash the surface with cool water, and rinse thoroughly. You may wish to use a non-abrasive cleaner specifically designed for use on stove glass. In any case, dry thoroughly before relighting your stove.

P43-C & P61-C Freestanding Pellet Stove

P68-C Freestanding Pellet Stove

## E. Burnpot Maintenance

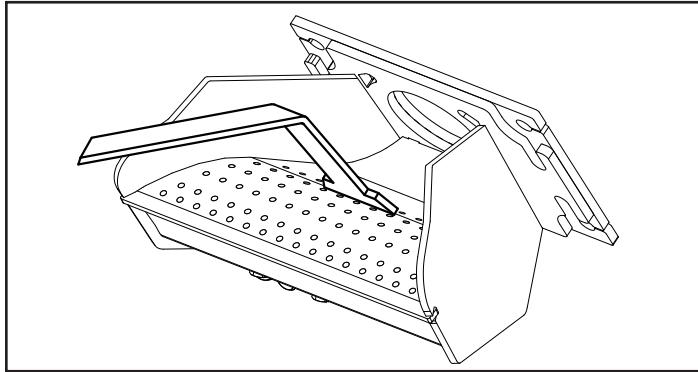

Figure 5.1

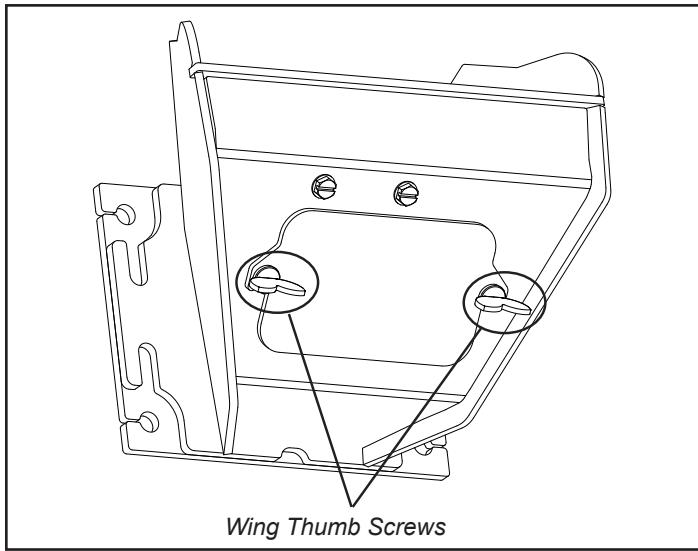

Figure 5.2

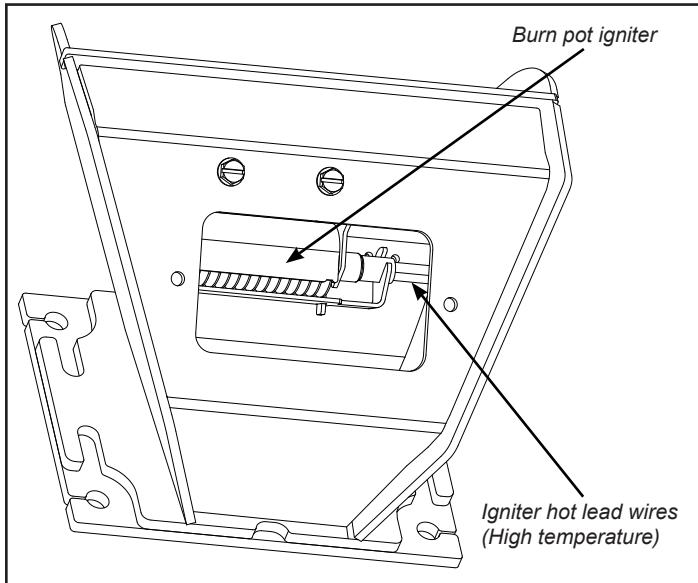

Figure 5.3 - View from below through the ash pan opening.

Whenever adding fuel, take the opportunity to clean the burn pot. (**Weekly at minimum**)

- Scrape the top holed surface and sides of the burn pot down to auger tube Figure 5.1. It is not necessary to completely remove all material from the burn pot. The excess will be pushed out during the next use.
- With the fire out and burn pot cold, use the supplied allen wrench to remove any build-up that may have accumulated in the holes of the burn pot grate. Simply push the allen wrench down through each hole ensuring it is clear of any build-up paying attention not to damage the igniter element in the process.

**Monthly, or after each ton of fuel burned:**

- Loosen the (2) wing thumb screws on the lower front angle of the burn pot. Figure 5.2
- Lift off the clean-out cover to open the bottom clean-out chamber. Figure 5.3

### DANGER

**Disconnect the power to the unit before removing cover.**

- Clean ash buildup from inside the chamber while cover is off. Use the scraper to tap on the top front edge of the burn pot. This will help knock pieces of ash, loosened by the scraping process, down through the holes. It also helps knock scale off of the igniter element.

### Figure 5.3

The igniter is made to be removable for service by insulated male/female wire connectors. These connections between the hot leads (the wires inside the burn pot) and the cold leads (the wires from the control board) are always pulled to the inside rear of the feeder body. (**Not coiled inside the burn pot.**)

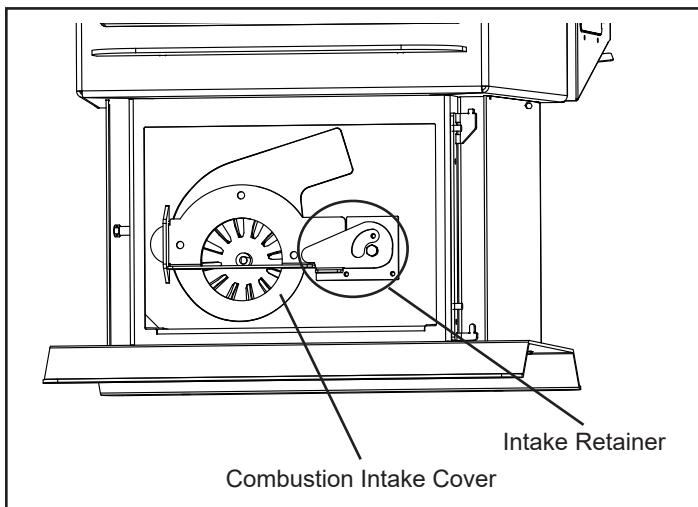

It is very important that these connections are to the inside rear of the feeder body. Also, the extra wire of the igniter wire service loop must be pulled out through the rear of the feeder and tied up so that it will not be damaged by any moving parts.

**Note:** The hot lead/cold lead connection must always be pulled to the rear of the feeder body before operation.

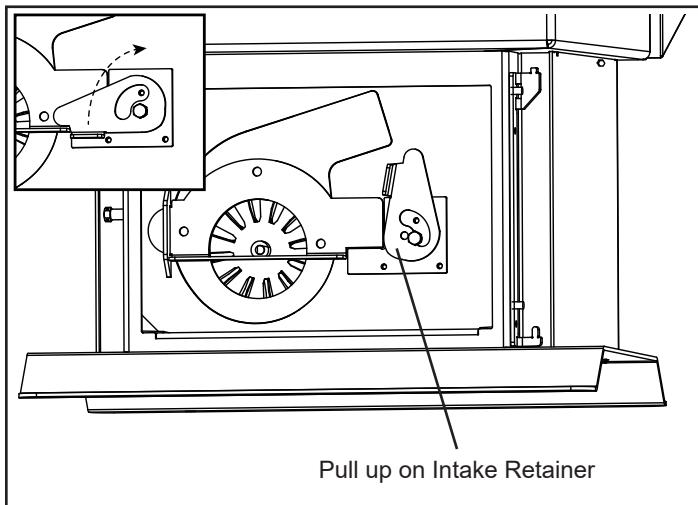

### WARNING

**Use caution when cleaning burn pot clean-out chamber. Do not damage the high temperature igniter wires.**

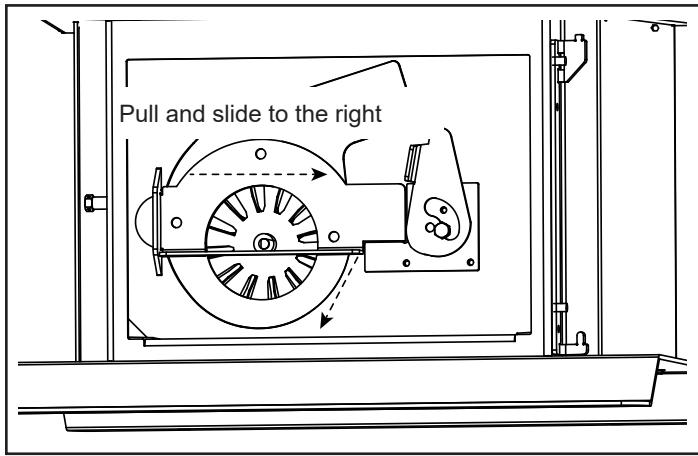

## F. Combustion Blower Chamber

**Figure 5.4**

**Figure 5.5**

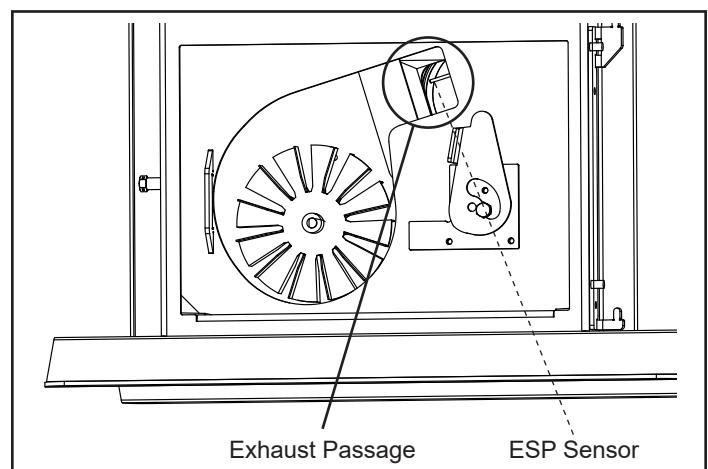

**Figure 5.6**

## Monthly Cleaning- continued:

There is a combustion intake cover located behind the ash pan that must be removed to properly clean the combustion blower fan blade. Figure 5.4. In order to remove the combustion intake cover you must pull up on the intake retainer. Figure 5.5. This will allow the combustion intake cover to be removed. To remove the combustion intake cover pull towards the front of the unit while sliding to the right. Figure 5.6.

Now that the combustion intake cover is removed you can remove any flyash or debris that has collected around combustion blower fan blade and areas around it.

The exhaust passage may need cleaned as well. Keep in mind the ESP Sensor is located just inside the exhaust passage Figure 5.7. Be sure not to damage the ESP Sensor while cleaning this area.

**Figure 5.7**

## G. Pellet Feeder Chamber

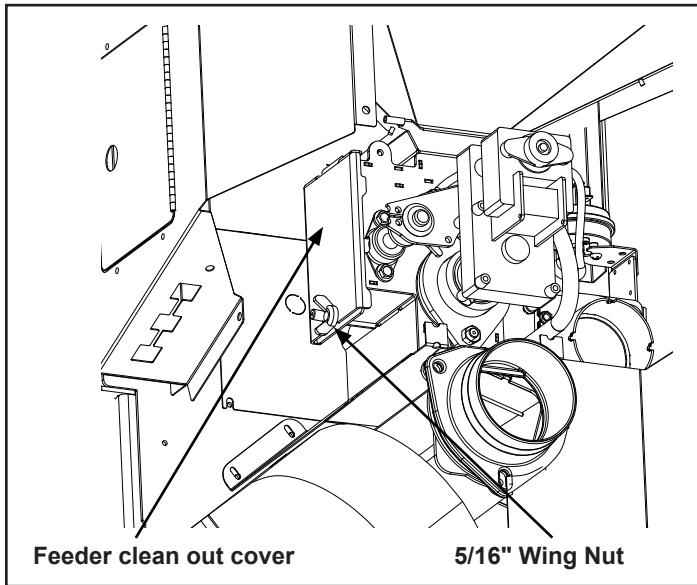

Figure 5.8

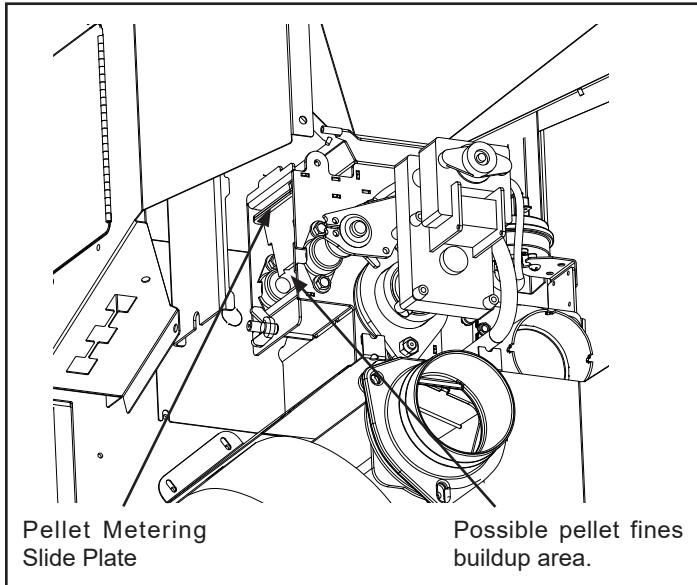

Figure 5.9

## Feeder Chamber

This chamber may get a buildup of fines from the feeder mechanism movement. This area should be checked and cleaned at least once a year.

### To remove the feeder cover:

- Loosen the 5/16" wing nut. Figure 5.8.
- Lift up and slide the cover off of the threaded stud.
- Inspect and clean the inner chamber if necessary Figure 5.9.
- Reinstall the cover making certain it is seated properly on the feeder body and tighten as tightly as you can by hand.

**NOTE: Views are shown with the rear motor covers removed.**

# **6 Troubleshooting and Frequently Asked Questions**

## **A. Error Code Description**

### **Status light error messages:**

**2 Blinks:** Indicates an open feed circuit, typically from pressure switch or hopper switch. Blink status automatically clears when feed circuit is complete. Does not blink if door/hopper is opened when stove is off.

**3 Blinks:** Indicates that the ESP (Exhaust Sensing Probe) has failed, has a broken connection, or has gone out of range too many times. This requires a manual reset\*.

**4 Blinks:** Can occur only in Room Temp Mode and indicates Room Sensing Probe failed or not installed. If a Room Sensing Probe is then installed, the status light will automatically reset.

**NOTE:** Unit will not start in "AUTO" with this status error.

**5 Blinks (In Igniter Auto. Mode Only):** Indicates that the unit has failed to light within the 36 minute start cycle. To reset - Turn Mode Selector to "OFF", then turn to either mode again.)

**6 Blinks :** Indicates that the control has calculated poor or incomplete combustion occurring for more than 25 minutes.

A six blink status may be set if the stove is allowed to run out of pellets. To reset, turn mode selector to "OFF" then back on to the desired mode. If the unit was not out of pellets, see Troubleshooting section for more details.

\* **Manual reset-** disconnect power cord for a few seconds and reconnect. If error still occurs call your Dealer.

## **B. Frequently Asked Questions**

ISSUES	SOLUTIONS
1. Metallic noise.	1. Noise is caused by metal expanding and contracting as it heats up and cools down, similar to the sound produced by a furnace or heating duct. This noise does not affect the operation or longevity of your appliance.
2. White ash buildup on glass.	2. This is normal. Clean the glass using any non-abrasive glass cleaner.
3. Glass has buildup of black soot	3. Excessive build-up of ash. See solution #4. The lower burn settings will produce more ash, the higher burn settings produce less. The more it burns on low the more frequent cleaning of the glass is required.
4. Glass has turned dirty.	4. Excessive build up of ash. The lower burn settings will produce more ash, the higher burn settings produce less. The more it burns on low the more frequent cleaning of the glass is required.
5. Fire has tall flames with black tails and is lazy.	5. The feed rate needs to be reduced or the burnpot needs cleaning. Heat exchanger or exhaust blower needs cleaning.
6. Smoky start-up or puffs of smoke from the airwash.	6. Either the burnpot is dirty or there is too much fuel at start-up and not enough air.
7. Large flame at start-up.	7. This is normal. Flame will settle down once the fire is established.

Contact your dealer for additional information regarding operation and troubleshooting. Visit [www.harmanstoves.com](http://www.harmanstoves.com) to find dealer.

## C. Troubleshooting

With proper installation, operation, and maintenance your appliance will provide years of trouble-free service. If you do experience a problem, this troubleshooting guide will assist a qualified service person in the diagnosis of a problem and the corrective action to be taken. This troubleshooting guide can only be used by a qualified service technician.

### STOVE DOES NOT FEED

1. No fuel in hopper.
2. Firebox draft may be too low for sensing switch in feeder circuit to operate. **Check for closed doors**, loose or missing gasket on doors or hopper lid.
3. Feed motor will not run until the ESP control senses a certain temperature. Maybe you did not put enough fuel or starting gel in the burn pot before manually lighting the fire.
4. Restriction in the hopper or feeder. Remove all fuel and examine. Clear the obstruction.
5. Feed motor has failed.

### PARTIALLY BURNED PELLETS

1. Feed rate too high.
2. Poor air to fuel mixture. (Check burn pot clean-out cover and air intake).
3. Burn pot or heat exchanger tubes may need to be cleaned.
4. Combination of all the above.
5. #6 status blink: A 6 blink control board status indication is caused by poor or incomplete combustion. The circuit board has the ability to track the combustion through feed settings and ESP temperatures. When the control board has calculated poor or incomplete combustion, it will shut down the unit as a safety feature. (Poor or incomplete combustion is a contributor of creosote which may cause a chimney fire)

### A 6 blink status may be caused by several things:

1. Blocked or partially blocked flue.
2. Blocked or partially blocked inlet air.
  - a. Backdraft damper on the inlet pipe may be stuck closed.
  - b. If outside air is installed, the inlet cover may be blocked.
3. The air chamber under the burnpot may be filled with fines and small bits of ash.
4. The holes in the burnpot may be getting filled with ash or carbon buildup.
5. Combustion blower fan blades may need cleaned.
6. Fuel restrictions as noted above.

### SMOKE SMELL

Follow venting manufacturer's recommendations for sealing pipe joints. The exhaust vent is the only part of the system that is under positive pressure.

### FIRE HAS GONE OUT- Check for status light.

1. No fuel in hopper.
2. Draft is too low, blocked flue.
3. Something is restricting fuel flow.
4. Hopper lid not closed properly.
5. Feed motor or combustion blower has failed.

### SMOKE IS VISIBLE COMING OUT OF VENT

1. Air-fuel ratio is too rich.
  - a. Feed rate too high.
  - b. Draft too low caused by a gasket leak.

### LOW HEAT OUTPUT

1. Feed rate too low
2. Draft too low because of gasket leak.
3. Poor quality or damp pellets
4. Combination of 1 and 2.

### HELPFUL HINTS

#### 1. Cleaning Burn Pot

Whenever your stove is not burning, take the opportunity to scrape the burn pot to remove carbon buildup. A vacuum cleaner is handy to remove the residue. Be sure the stove is cold if you use a vacuum.

Carbon buildup can be scraped loose with the fire burning using the special tool provided with your stove. Scrape the floor and sides of the burn pot. The carbon will be pushed out by the incoming fuel. Always wear gloves to do this.

#### 2. Removing Ashes

Turn the Temp Dial to number 1 approximately 30 minutes before removing ashes. This will result in a cooler stove and ash pan.

Maximum Feed Limit settings are not needed in most cases. Operating in the normal range (#4) is recommended when maximum heat output is not required. The ESP probe prevents the stove from being over-fired.

Keep the stove free of dust and dirt.

### Fuel

The P-Series Pellet Stove is approved for burning any grade of pelletized bio-mass fuel.

It should be noted, however, that higher ash content will require more frequent ash removal, scraping of the burn pot, and may provide less BTU's per pound.

The moisture content of pellets must not exceed 8%. Higher moisture will rob BTU's and may not burn properly.

Fuel should not be stored within the stove installation clearances or within the space required for cleaning and ash removal.

# 7 Reference Material

## A. Safety Reminders

When operating your Harman® P-Series Pellet Stove, respect basic safety standards. Read these instructions carefully before you attempt to operate the P-Series Pellet Stove. Failure to do so may result in damage to property or personal injury and may void the product warranty.

**CAUTION: This appliance must be vented to the outside.**

Due to high temperatures, this stove should be placed out of traffic and away from furniture and draperies.

Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burn to skin and/or clothing.

Young children should be carefully supervised when they are in the same room as the stove.

Clothing and other flammable materials should not be placed on or near this stove.

Installation and repair of this stove should be done by a qualified service person. The appliance should be inspected before use and at least annually by a qualified service person. More frequent cleaning will be required. It is imperative that control compartments and circulating air passageways of this stove be kept clean.

**Disposal of ashes:** Ashes should be placed in a metal container with a tight fitting lid. The closed container of ashes should be placed on a non-combustible floor or on the ground, well away from all combustible materials, pending final disposal. If the ashes are disposed of by burial in soil or otherwise locally dispersed, they should be retained in the closed container until all cinders have thoroughly cooled.

**Soot and fly ash:** Formation and need for removal. The products of combustion contain small particles of fly ash. The fly ash will collect in the exhaust venting system and will restrict the flow of the flue gases. Pellet fuels have different ash contents depending on what type of wood has been used to make the pellets. **We recommend to clean the system after approximately 1 ton of pellets have been burned and judge from that how often the stove should be cleaned, remember if you change pellets it may change how often you have to clean your stove.**

When burning wood slowly, the potential exists for creosote to form. The venting system should be inspected periodically throughout the heating season to determine if a creosote buildup has occurred. If a significant layer of creosote has accumulated (3mm or more), it should be removed to reduce the risk of a chimney fire. If a fire occurs, call the fire department, shut down the stove, and evacuate the residence. Before using the appliance, have the venting system thoroughly inspected and replace any damaged components.

### WARNING

MOBILE/MANUFACTURED HOME GUIDELINES DO NOT ALLOW INSTALLATION IN A SLEEPING ROOM.

### CAUTION

THE STRUCTURAL INTEGRITY OF THE MOBILE HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED.

### CAUTION

THE STOVE IS HOT WHILE IN OPERATION.

KEEP CHILDREN, CLOTHING AND FURNITURE AWAY. CONTACT MAY CAUSE SKIN BURNS.

### WARNING

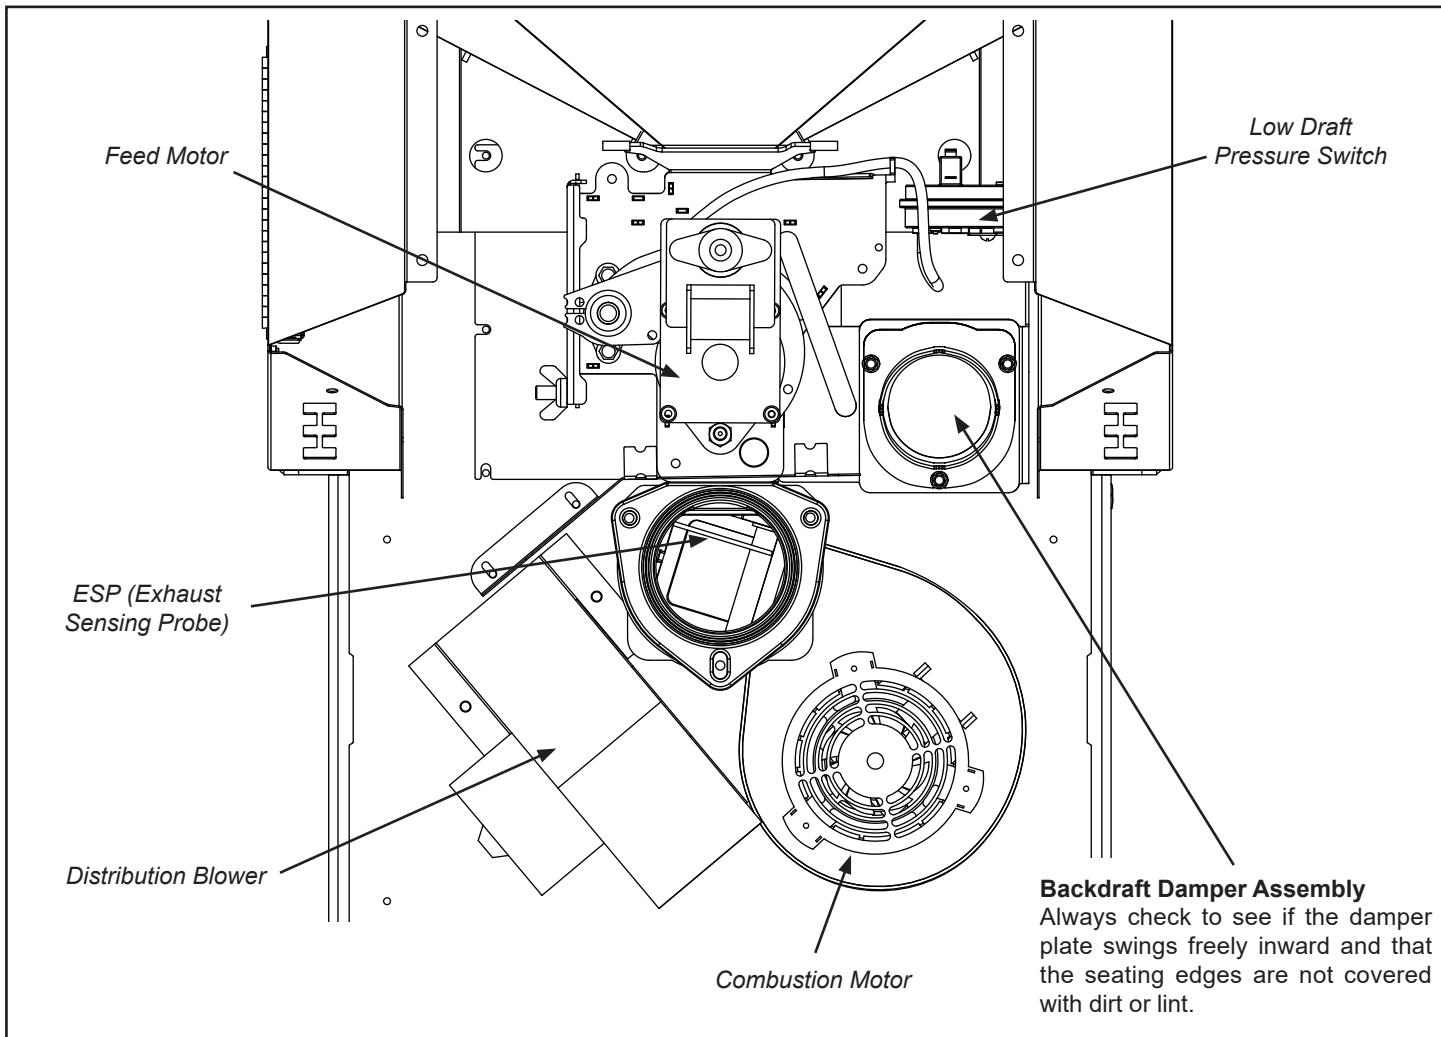

KEEP COMBUSTIBLE MATERIALS SUCH AS GRASS, LEAVES, ETC. AT LEAST 3 FEET AWAY FROM THE POINT DIRECTLY UNDER THE VENT TERMINATION.

### WARNING

USE OF IMPROPER FUELS, FIRESTARTERS OR ALTERING THE STOVE FOR HIGHER HEAT OUTPUT MAY CAUSE DAMAGE TO THE STOVE AND COULD RESULT IN A HOUSE FIRE. USE ONLY APPROVED FUELS AND OPERATION GUIDELINES

## B. Motor and Component Location

## P-Series Pellet Stove Safety Devices

The **Control Board/ESP** combination is responsible for all high limit safety control. There are 2 high limits, one normal operation high limit and one backup high limit. The control has an automatic diagnostic circuit that continuously monitors the ESP and Room Sensor for faults. If a fault should occur, the control sends a status alert and at the same time the unit goes down to minimum feed/minimum burn as a safety condition.

The **Low Draft Pressure Switch** is a differential pressure switch that monitors the negative pressure (Draft) in the firebox. If the draft becomes too low for proper combustion, the switch opens, cutting power to the feed motor and the igniter circuits. This switch is connected into the AC (high voltage) wiring.

## C. Loss of Power

Harman pellet burning appliances rely on a combustion blower to remove exhaust from the firebox. A power failure will cause the combustion blower to stop running, which may lead to exhaust see page into the room. Vertical rise in the venting system can help create natural draft, which may reduce the likelihood of exhaust leakage into the home.

Installation of a low-cost uninterruptible power supply (UPS) or battery backup system can help ensure the units shuts down without any minor smoke leakage into the home. Harman recommends the installation of one of these two systems for areas prone to power outages.

**There is one Harman® approved UPS option for your appliance:**

**Uninterruptible Power Supply UPS** battery back-ups are available online or at computer and office equipment stores. Your Harman® appliance with Rev E or later software available beginning in November 2010 may be plugged directly into a Harman® approved UPS:

- **TrippLite model INTERNET750U** is tested and approved. Other brands or models may not be compatible.

When power is lost, a fully charged UPS will power a safe, combustion blower only shut-down. Your appliance will pulse the blower every few seconds to clear exhaust until the fire is out. **NOTE: The UPS provides safe shut-down only. It is not intended for continued operation.**

• A Inverter/Charger connects to a 12 volt deep cycle battery that will run your appliance for up to eight (8) hours. It includes a trickle charge feature that keeps your battery charged when power is available. **NOTE:** If the power is out for longer than battery life, smoke leakage may still occur unless your stove has been safely shut down.

**For an approved Inverter/Charger refer to [www.harmanstoves.com](http://www.harmanstoves.com).**

Your appliance will recognize when power is restored. What happens depends on ESP temperature and whether it is equipped with automatic ignition:

- **In "Automatic" Mode**, units equipped with automatic ignition will respond to the set point and ESP temperature and resume normal operation.
- **In "Idle" Mode**, or for units without automatic ignition:
  - If the ESP is cool, the appliance will remain shut down.
  - If the fire is out and the ESP is still warm, the feeder may restart. Since the fire is out, the ESP temperature will not rise. The unit will then shut-down, and may flash a six-blink status error. (See ESP error codes)
  - If the fire is still burning, it will resume normal operation.

Contact your dealer if you have questions about UPS compatibility with your appliance.

**IMPORTANT! :** UPS or Battery Backup cannot prevent smoke leakage from an improperly maintained unit. Keep the venting system clean and free from obstructions and maintain all gaskets to keep an airtight seal.

### WARNING

**Use only Harman® approved battery back-up devices. Other products may not operate properly, can create unsafe conditions or damage your appliance.**

### CAUTION

**Always keep appliance doors and hopper lid closed and latched during operation and during power failures to minimize risk of smoke or burn-back.**

## D. Emergency Manual Ignition

Harman® pellet stoves and inserts should be lit using the automatic ignition system. This is the safest and most reliable way for igniting the unit. In the event the automatic igniter is not functioning, the steps below may be followed to manually light the stove or insert in the "Constant Burn" mode. Manual lighting is for emergency purposes only, and the igniter should be repaired or replaced as soon as practical.

### WARNING

**Only use firestarter commercially marketed for pellet stoves and inserts, including wax coated wood chips, pellet starter gel and pellet igniter blocks. Use of any other type of firestarter is prohibited.**

To avoid serious injury or death read and follow manufacturer's warning and instructions for use of firestarter. Use of firestarter is only permitted when performing a cold start.

Never attempt to manually light a stove or insert that has been operated recently and is not at room temperature. If automatic ignition was attempted, be sure to give the stove or insert at least 30 minutes or longer to cool to room temperature.

Be sure that the stove or insert is in the "Igniter - Disabled" mode of operation.

Once all the precautions have been taken, follow these steps:

1. Turn the Mode Selector to "OFF".
2. Fill burn pot with pellets, only half way. (Do Not Over Fill).
3. Add firestarter to pellets following manufacturer's instructions.
4. Light pellet gel with a match, and close the door, turn Mode Selector to Constant Burn. Operation will begin when the fire reaches the proper temperature.

## E. Service Parts

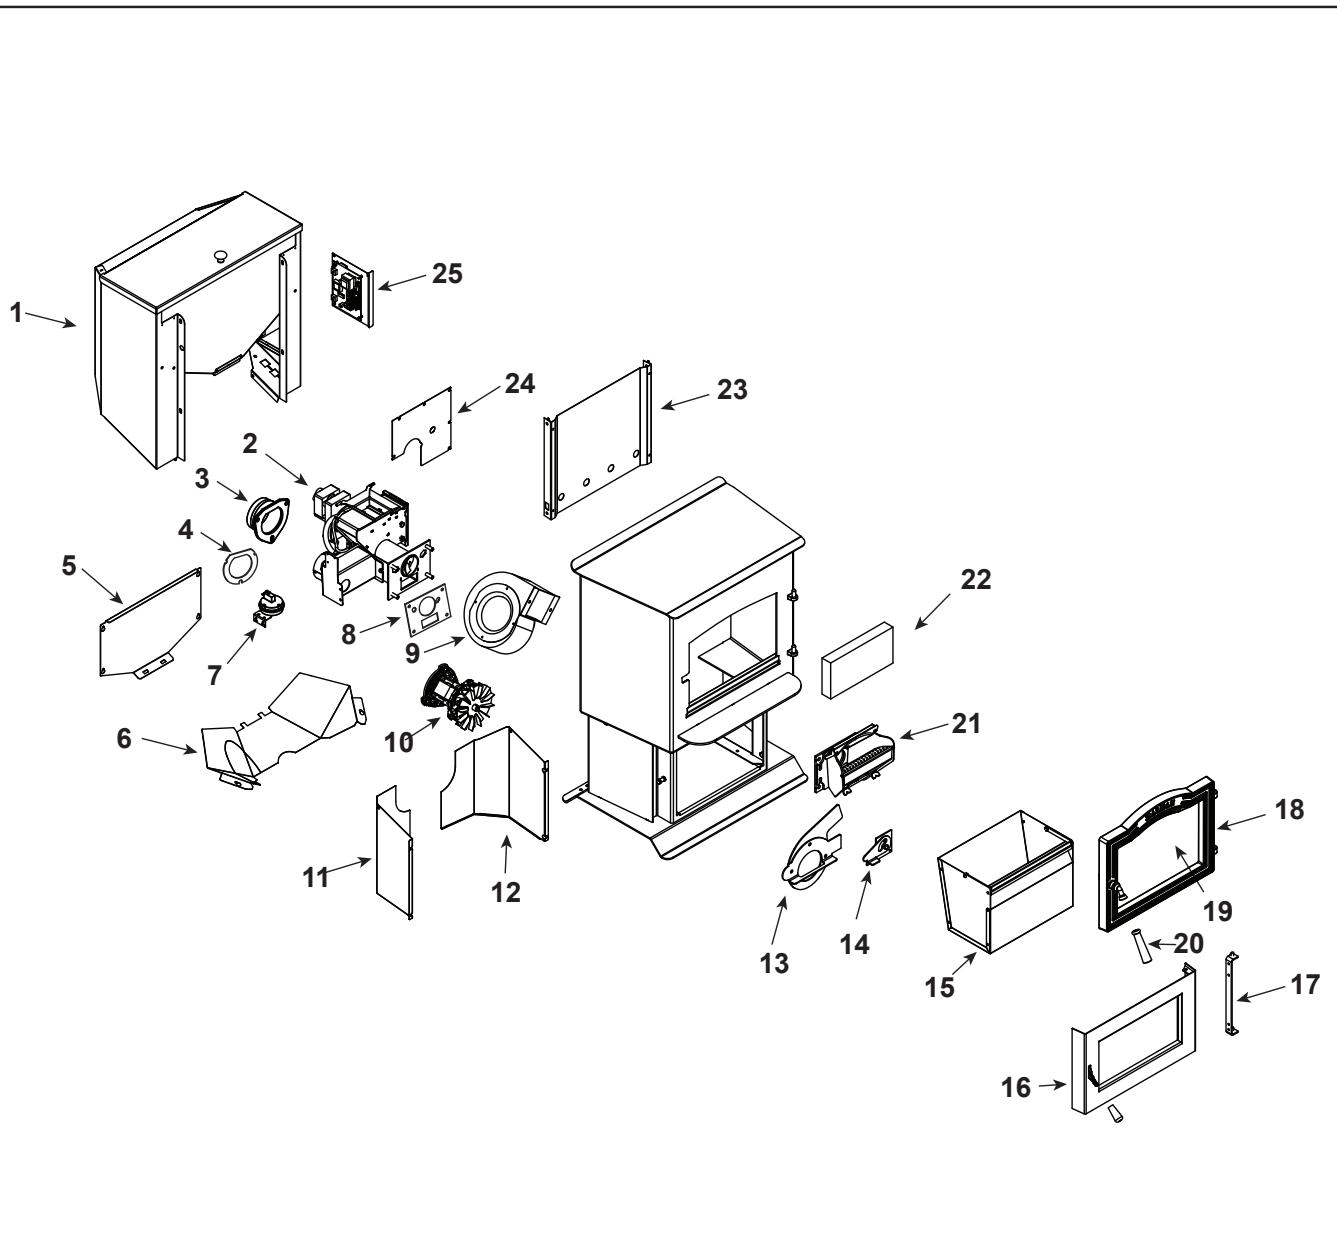

### Service Parts

Steel Pellet Stove  
1-90-04400-1 (Black)

**P43-C Pellet**

Beginning Manufacturing Date: March 2019  
Ending Manufacturing Date: Active

**IMPORTANT: THIS IS DATED INFORMATION.** Parts must be ordered from a dealer or distributor.

## G. Warranty Policy

### Hearth & Home Technologies LLC

#### LIMITED LIFETIME WARRANTY

Hearth & Home Technologies LLC ("HHT") extends the following warranty for HHT gas, wood, pellet and electric hearth appliances (each a "Product" and collectively, the "Product(s)") and certain component parts set forth in the table below ("Component Part(s)") that are purchased from a HHT authorized dealer or distributor.

#### **WARRANTY COVERAGE:**

HHT warrants that the Products and their Component Parts will be free from defects in materials and workmanship for the applicable period of Warranty coverage set forth in the table below ("Warranty Period"). If a Product or Component Parts are found to be defective in materials or workmanship during the applicable Warranty Period, HHT will, at its option, repair the applicable Component Part(s), replace the applicable Component Part(s), or refund the purchase price of the applicable Product(s). The maximum amount recoverable under this Warranty is limited to the purchase price of the Product. This Warranty is transferable from the original purchaser to subsequent owners, but the Warranty Period will not be extended in duration or expanded in coverage for any such transfer. This Warranty is subject to conditions, exclusions, and limitations as described below.

#### **WARRANTY PERIOD:**

Warranty coverage begins at the date of installation. In the case of new home constructions, Warranty coverage begins on the date of first occupancy of the dwelling or six months after the sale of the Product(s) by an independent, authorized HHT dealer or distributor, whichever occurs earlier. However, the Warranty coverage shall commence no later than 24 months following the date of Product shipment from HHT, regardless of the installation or occupancy date.

The term "Lifetime" in the table below is defined as: 20 years from the beginning date of warranty coverage for gas appliances, 10 years from the beginning date of warranty coverage for wood and pellet appliances, and 5 years from the beginning of warranty coverage for standalone gas log sets. These time periods reflect the minimum expected useful lives of the designated Component Parts under normal operating conditions.

Warranty Period		HHT Manufactured Appliances and Venting					
Component Parts	Labor	Gas	Pellet	Wood	Electric	Venting	Component Parts Covered by this Warranty
1 Year		X	X	X		X	All parts including handles, external enameled components and other material except as covered by Warranty Conditions, Warranty Exclusions, and Warranty Limitations listed
2 Years					X		All parts except as covered by Warranty Conditions, Warranty Exclusions, and Warranty Limitations listed
2 years			X	X			Igniters, Auger Motors, Electronic Components, and Glass
		X					Electrical components limited to modules, remotes/wall switches, valves, pilots, blowers, junction boxes, wire harnesses, transformers and lights (excluding light bulbs)
		X		X			Molded Refractory Panels, Glass Liners
3 years			X				Firepots, burnpots, mechanical feeders/auger assemblies
5 years		X					Burners and logs for standalone gas log sets (Vented and Vent Free gas log sets not sold as components of the fireplace or stove)
5 years	1 year	X					Vent Free Burners and Vent Free Log components of HHT manufactured fireplaces or stoves
			X	X			Castings, Medallions and Baffles
6 years	3 years			X			Catalysts
7 years	3 years		X	X			Manifold tubes, HHT Chimney and Terminations
10 years	1 year	X					Burners, logs and refractory components of HHT manufactured fireplaces or stoves
Limited Lifetime	3 years	X	X	X			Firebox and heat exchanger, FlexBurn® System (engine, inner cover, access cover and fireback)
1 Year	None	X	X	X	X	X	All purchased replacement parts

## **WARRANTY CONDITIONS:**

- Because HHT cannot control the quality of any Products sold by unauthorized sellers, this Warranty only covers Products that are purchased through an HHT authorized dealer or distributor unless otherwise prohibited by law; a list of HHT authorized dealers is available on the HHT branded websites.
- This Warranty is only valid while the applicable Product remains at the site of original installation.
- This Warranty is only valid in the country in which the HHT authorized dealer or distributor that sold the applicable Product is authorized to sell applicable Product.
- Contact your installing distributor or dealer for Warranty service. If the installing dealer or distributor is unable to provide necessary parts, contact the nearest HHT authorized dealer or supplier. Additional service fees may apply if you are seeking Warranty service from a dealer other than the dealer from whom you originally purchased the applicable Product.
- No HHT consumer should bear cost of warranty service or costs incurred while servicing warranty claims (i.e., travel, gas, or mileage) when the service is performed within the terms of this Warranty. Check with your dealer or distributor in advance for any costs to you when arranging a warranty call. Travel and shipping charges for parts are not covered by this Warranty.

## **WARRANTY EXCLUSIONS:**

This Warranty does not cover the following:

- Changes in surface finishes as a result of normal use. As a heating appliance, some changes in color of interior and exterior surface finishes may occur. This is not a flaw and is not covered under the Warranty.
- Damage to printed, plated, or enameled surfaces caused by fingerprints, accidents, misuse, scratches, melted items or other external sources and residues left on the plated surfaces from the use of abrasive cleaners or polishes.
- Repair or replacement of parts that are subject to normal wear and tear during the Warranty Period are not covered. These parts include: paint, wood and pellet gaskets, firebricks, grates, flame guides, batteries and the discoloration of glass.
- Minor expansion, contraction, or movement of certain parts causing noise. These conditions are normal and complaints related to this noise are not covered by this Warranty.
- Damages resulting from: (1) failure to install, operate, or maintain the applicable Product in accordance with the installation instructions, operating instructions, and listing agent identification label furnished with the applicable Product; (2) failure to install the applicable Product in accordance with local building codes; (3) shipping or improper handling; (4) improper operation, abuse, misuse, continued operation with damaged, corroded or failed components, accident, or improperly/incorrectly performed repairs; (5) environmental conditions, inadequate ventilation, negative pressure, or drafting caused by tightly sealed constructions, insufficient make-up air supply, or handling devices such as exhaust fans or forced air furnaces or other such causes; (6) use of fuels other than those specified in the operation instructions; (7) installation or use of components not supplied with the applicable Product or any other components not expressly authorized and approved by HHT; (8) modification of the appliance not expressly authorized and approved by HHT in writing; and/or (9) interruptions or fluctuations of electrical power supply to the applicable Product.
- Non-HHT venting components, hearth connections or other accessories used in conjunction with the applicable Product.
- Any part of a pre-existing fireplace system in which an insert or a decorative gas applicable Product is installed.
- HHT's obligation under this Warranty does not extend to the Product's capability to heat the desired space. Information is provided to assist the consumer and the dealer in selecting the proper Product for the application. Consideration must be given to the Product location and configuration, environmental conditions, insulation and air tightness of the structure.

## **This warranty is void if:**

- The applicable Product has been over-fired, operated in atmospheres contaminated by chlorine, fluorine, or other damaging chemicals. Over-firing can be identified by, but not limited to, warped plates or tubes, deformation/warping of interior cast iron structure or components, rust colored cast iron, bubbling, cracking and discoloration of steel or enamel finishes.
- The applicable Product is subjected to prolonged periods of dampness or condensation.
- There is any damage to the applicable Product due to water or weather damage which is the result of, but not limited to, improper chimney or venting installation.

## **LIMITATIONS OF REMEDIES AND LIABILITY:**

- **EXCEPT TO THE EXTENT PROVIDED BY LAW, HHT MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFIED HEREIN.** The owner's exclusive remedy and HHT's sole obligation under this Warranty or in contract, tort or otherwise, shall be limited to replacement of the Component Part(s), repair of the Component Part(s), or refund of the original purchase price of the applicable Product(s), as specified above; provided, however, that (i) if HHT is unable to provide replacement of the Component Part(s) and repair of the Component Part(s) is not commercially practicable or cannot be timely made, or (ii) the customer is willing to accept a refund of the purchase price of the applicable Product(s), HHT may discharge all such obligations by refunding the purchase price of the applicable Product. In no event will HHT be liable for any incidental or consequential damages caused by defects in the applicable Product. Some States do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. This Warranty gives you specific legal rights and you may also have other rights which vary from State to State. **THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE FOR THE APPLICABLE PRODUCT.** Some States do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

# Installation Manual

## Installation and Appliance Setup

**INSTALLER:** Leave this manual with party responsible for use and operation.

**OWNER:** Retain this manual for future reference.

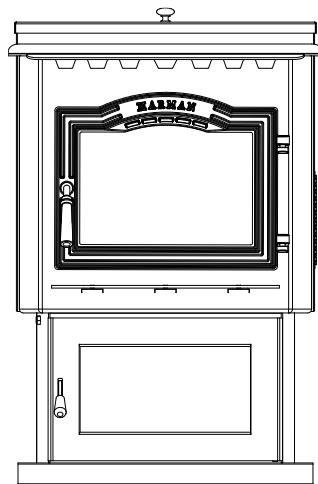

### NOTICE: SAVE THESE INSTRUCTIONS

# HARMAN®

BUILT TO A STANDARD, NOT A PRICE

**Model(s):**

**P43-C, P61-C & P68-C**  
**Freestanding Pellet Stove**

### CAUTION

Check building codes prior to installation.

- Installation MUST comply with local, regional, state and national codes and regulations.
- Contact local building or fire officials about restrictions and installation inspection requirements in your area.

### NOTE

To obtain a French translation of this manual, please contact your dealer or visit [www.harmanstoves.com](http://www.harmanstoves.com)

Pour obtenir une traduction française de ce manuel, s'il vous plaît contacter votre revendeur ou visitez [www.harmanstoves.com](http://www.harmanstoves.com)

### WARNING

Please read this entire manual before installation and use of this pellet fuel-burning room heater. Failure to follow these instructions could result in property damage, bodily injury or even death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- Do not overfire - If any external part starts to glow, you are overfiring. Reduce feed rate. Overfiring will void your warranty.
- Comply with all minimum clearances to combustibles as specified. Failure to comply may cause house fire.

### WARNING

#### HOT SURFACES!

Glass and other surfaces are hot during operation AND cool down.

#### Hot glass will cause burns.

- Do not touch glass until it is cooled
- NEVER allow children to touch glass
- Keep children away
- CAREFULLY SUPERVISE children in same room as stove.
- Alert children and adults to hazards of high temperatures. **High temperatures may ignite clothing or other flammable materials.**
- Keep clothing, furniture, draperies and other flammable materials away.

## ▲ Safety Alert Key:

- **DANGER!** Indicates a hazardous situation which, if not avoided will result in death or serious injury.
- **WARNING!** Indicates a hazardous situation which, if not avoided could result in death or serious injury.
- **CAUTION!** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
- **NOTICE:** Indicates practices which may cause damage to the stove or to property.

## Installation Standard Work Checklist

### ATTENTION INSTALLER: Follow this Standard Work Checklist

This standard work checklist is to be used by the installer in conjunction with, not instead of, the instructions contained in this installation manual.

Customer: \_\_\_\_\_  
Lot/Address: \_\_\_\_\_  
Model: \_\_\_\_\_

Date Installed: \_\_\_\_\_  
Location of Stove: \_\_\_\_\_  
Installer: \_\_\_\_\_  
Dealer/Distributer Ph #: \_\_\_\_\_  
Serial Number: \_\_\_\_\_

**WARNING! Risk of Fire or Explosion! Failure to install appliance to these instructions can lead to a fire or explosion.**

#### Appliance Install Section 3

Required non-combustible floor protection  
Verified clearances to combustible.  
Unit is Leveled and secured.

YES

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

IF NO, WHY?

#### Venting/Chimney Section 4

Venting Configuration complies to vent diagrams.  
Venting installed, sealed and secured in place with proper clearances.  
Exterior wall/roof flashing installed and sealed  
Terminations installed and sealed.

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

#### Electrical Section 1

120 VAC unswitched power provided to the appliance.  
Check outlet with multi-meter for proper voltage. (115-120 VAC)  
Record voltage reading: \_\_\_\_\_

\_\_\_\_\_  
 \_\_\_\_\_

#### Appliance Setup Section 5

All packaging and protective materials are removed  
Accessories installed properly  
Manual bag and all it's contents are removed from inside the appliance and given to party responsible for use and operation  
Started appliance and verified that all motors and blowers operate as they should.  
Checked draft using a Manometer. Record readings: \_\_\_\_\_  
During operation, verify that the hopper lid switch (If applicable) and pressure switch are working properly by briefly opening the hopper lid and main door and verifying that the feed motor is interrupted.

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

Hearth and Home Technologies recommends the following:

Photographing the installation and copying this checklist for your file.

This checklist remain visible at all times on the appliance until the installation is complete.

Comments: Further description of the issues, who is responsible (Installer/Builder/Other Trades, etc.) and corrective action needed \_\_\_\_\_

Comments communicated to party responsible \_\_\_\_\_ by \_\_\_\_\_ on \_\_\_\_\_

# 1 Product Specific and Important Safety Information

## A. Appliance Certification

MODEL:	P43-C Pellet Stove
LABORATORY:	OMNI Test Laboratories, Inc
REPORT NO.	0135PS023E / 0135PS023S
TYPE:	Pellet Fueled/Supplementary For Residential Use
STANDARD(s):	ASTM E 1509-04, ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

MODEL:	P61-C Pellet Stove
LABORATORY:	OMNI Test Laboratories, Inc
REPORT NO.	0135PS022E / 0135PS022S
TYPE:	Pellet Fueled/Supplementary For Residential Use
STANDARD(s):	ASTM E 1509-04, ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

MODEL:	P68-C Pellet Stove
LABORATORY:	OMNI Test Laboratories, Inc
REPORT NO.	0135PS013E / 0135PS013S
TYPE:	Pellet Fueled/Supplementary For Residential Use
STANDARD(s):	ASTM E 1509-04, ULC-S627-00, ASTM E 2515-11, ASTM E 2779-10

**NOTE:** This installation must conform with local codes. In the absence of local codes you must comply with the **ASTM E1509-2004, ULC-S627-00, ULC/ORD-C-1482-M1990, (UM) 84-HUD**

The P43-C, P61-C and P68-C is Certified to comply with 2020 particulate emission standards.

## B. Glass Specifications

This appliance is equipped with 5mm mirrored ceramic glass. Replace glass only with 5mm ceramic glass. Please contact your dealer for replacement glass.

## C. Mobile Home Approved

This appliance is approved for mobile home installations when not installed in a sleeping room and when an outside combustion air inlet is provided.

The structural integrity of the mobile home floor, ceiling, and walls must be maintained. The appliance must be properly grounded to the frame of the mobile home and use only listed pellet vent, Class "PL" connector pipe.

A Harman® Outside Air Kit must be installed in a mobile home installation.

### **WARNING**

**THE STRUCTURAL INTEGRITY OF THE MANUFACTURED HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED.**

**DO NOT INSTALL IN SLEEPING ROOM.**

## D. California Safety Information

### **WARNING**

This product and the fuels used to operate this product (wood), and the products of combustion of such fuels, can expose you to chemicals including carbon black, which is known to the State of California to cause cancer, and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to: [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov)

## E. BTU & Efficiency Specifications

### → P43-C Freestanding Pellet Stove:

EPA Certification Number:	165-18
EPA Certified Emissions:	1.82 g/hr
*LHV Tested Efficiency:	78.5%
**HHV Tested Efficiency:	76.7%
***EPA BTU Output:	19,800 – 35,000
****BTU Input:	17,200 - 43,500
Vent Size:	3 Inch
Hopper Capacity:	50 lbs
Fuel	Wood Pellet

### P61-C Freestanding Pellet Stove:

EPA Certification Number:	177-19
EPA Certified Emissions:	1.5 g/hr
*LHV Tested Efficiency:	85%
**HHV Tested Efficiency:	79%
***EPA BTU Output:	17,100 - 46,800
****BTU Input:	21,400 - 60,700
Vent Size:	3 Inch
Hopper Capacity:	72 lbs
Fuel	Wood Pellet

### P68-C Freestanding Pellet Stove:

EPA Certification Number:	178-19
EPA Certified Emissions:	1.4 g/hr
*LHV Tested Efficiency:	85%
**HHV Tested Efficiency:	79.5%
***EPA BTU Output:	15,900 - 53,100
****BTU Input:	20,200 - 67,600
Vent Size:	3 Inch
Hopper Capacity:	76 lbs
Fuel	Wood Pellet

\* Weighted average LHV efficiency using data collected during EPA emissions test.

\*\*Weighted average HHV efficiency using data collected during EPA emissions test.

\*\*\*A range of BTU outputs based on EPA Default Efficiency and the burn rates from the low and high EPA tests.

\*\*\*\*Based on the maximum feed rate per hour multiplied by approximately 8,600 BTU's which is the average BTU's from a pound of pellets.

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

## F. Non-Combustible Materials Specification

Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.

Materials that are reported as passing **ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750° C** and **UL763** shall be considered non-combustible materials.

## G. Combustible Materials Specification

Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or plastered or un-plastered shall be considered combustible materials.

## H. Electrical Codes

120 VAC, 60 Hz, Start 4.2 Amps, Run 2.8 Amps

**NOTE: Some generator or battery back-up systems may not be compatible with the micro-processor electronics on this appliance. Please consult the power supply manufacturer for compatible systems.**

**WARNING! Risk of Fire!** Hearth & Home Technologies disclaims any responsibility for, and the warranty and agency listing will be voided by the below actions.

### DO NOT:

- Install or operate damaged appliance
- Modify appliance
- Install other than as instructed by Hearth & Home Technologies
- Operate the appliance without fully assembling all components
- Overfire
- Install any component not approved by Hearth & Home Technologies
- Install parts or components not Listed or approved.
- Disable safety switches

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage.

For assistance or additional information, consult a qualified installer, service agency or your dealer.

**NOTE:** Hearth & Home Technologies, manufacturer of this appliance, reserves the right to alter its products, their specifications and/or price without notice.

Harman® is a registered trademark of Hearth & Home Technologies.

## 2 Getting Started

### A. Design and Installation Considerations

#### 1. Appliance Location

**NOTICE:** Check building codes prior to installation.

- Installation MUST comply with local, regional, state and national codes and regulations.
- Consult insurance carrier, local building inspector, fire officials or authorities having jurisdiction over restrictions, installation inspection and permits.

It is a good idea to plan your installation on paper, using exact measurements for clearances and floor protection, before actually beginning the installation

Consideration must be given to:

- Safety, convenience, traffic flow
- Placement of the chimney and chimney connector.
- If you are not using an existing chimney, place the appliance where there will be a clear passage for a factory-built listed chimney through the ceiling and roof.
- Installing an optional outside air kit would affect the location of the vent termination.

Since pellet exhaust can contain ash, soot or sparks, you must consider the location of:

- Windows
- Air Intakes
- Air Conditioner
- Overhang, soffits, porch roofs, adjacent walls
- Landscaping, vegetation

When locating vent and venting termination, vent above roof line when possible.

**Warning! Risk of Fire** Damaged parts could impair safe operation. Do NOT install damaged, incomplete or substitute components.

**NOTICE:** Locating the appliance in a location of considerable air movement can cause intermittent smoke spillage from appliance. Do not locate appliance near:

- Frequently open doors
- Central heat outlets or returns

Installation and service of this appliance should be performed by qualified personnel. Hearth & Home Technologies recommends HHT Factory Trained or NFI certified professionals.

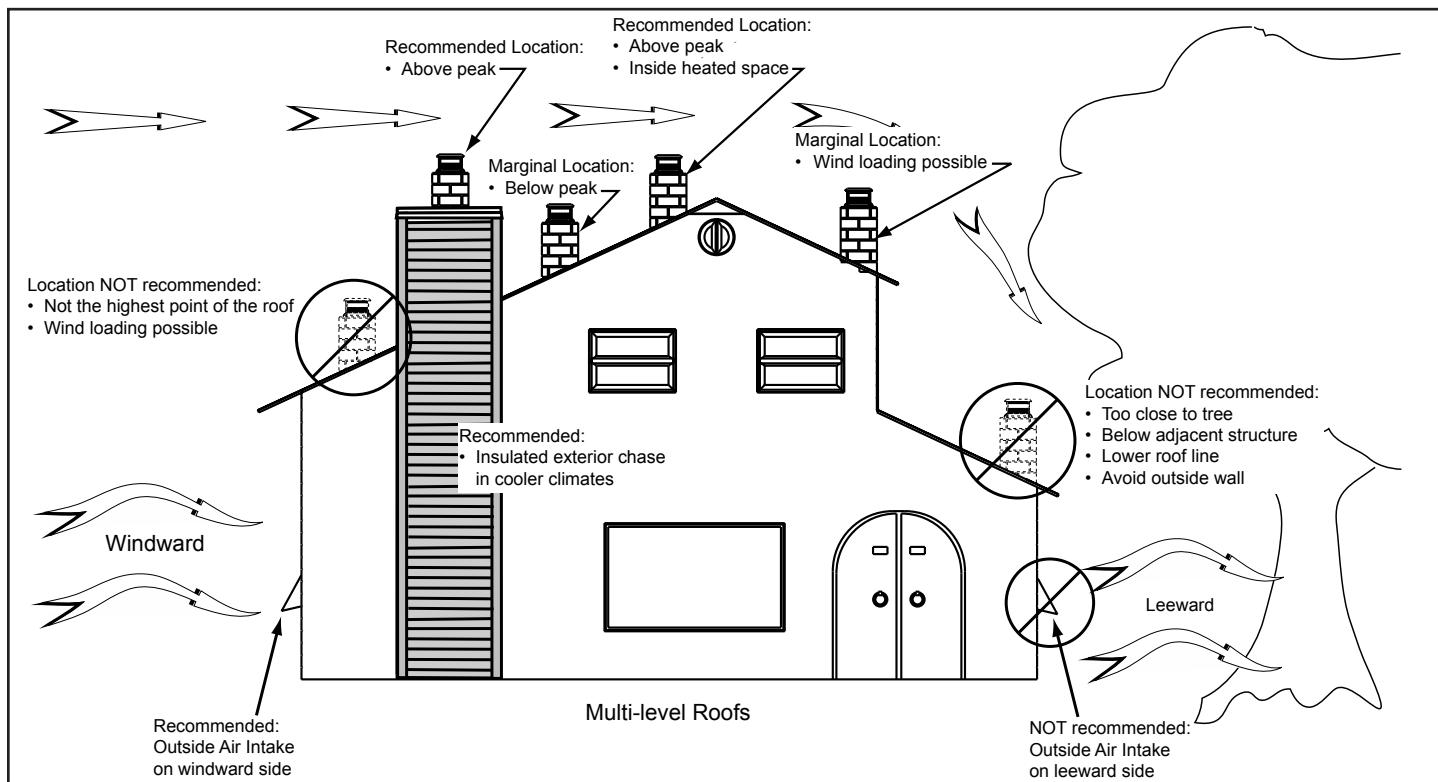

Figure 2.1

## B. Tools And Supplies Needed

Tools and building supplies normally required for installation, unless installing into an existing masonry fireplace:

Reciprocating Saw	Gloves
Hammer	Safety Glasses
Phillips Screwdriver	Electric Drill & Bits
Tape Measure	
Level	<u>May also need:</u>
Non-Combustible Sealant Material	Vent Support Straps Venting Paint

## WARNING

**Risk of Fire, Explosion or Electric Shock! DO NOT use this appliance if any part has been under water. Call a qualified service technician to inspect the appliance and to replace any part of the control system which has been under water.**

## INSTALL EXHAUST VENT AT CLEARANCES SPECIFIED BY THE MANUFACTURER.

Most pellet vent pipe requires a minimum of 1" of clearance to combustible materials although some can be installed at 1" clearance.

Follow these instructions along with all local codes regarding installation of this appliance.

Do **NOT** use makeshift compromises when installing this appliance, serious consequences may result.

## C. Inspect Appliance and Components

- Carefully remove the appliance and components from the packaging.
- The vent system components and decorative doors and fronts may be shipped in separate packages.
- Report to your dealer any parts damaged in shipment, particularly the condition of the glass.
- **Read all of the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.**

## WARNING

**RISK OF FIRE OR EXPLOSION!** *Damaged parts could impair safe operation. DO NOT install damaged, incomplete or substitute components. Keep appliance dry.*

Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by the following actions:

- Installation and use of any damaged appliance or vent system component.
- Modification of the appliance or vent system.
- Installation other than as instructed by Hearth & Home Technologies.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.

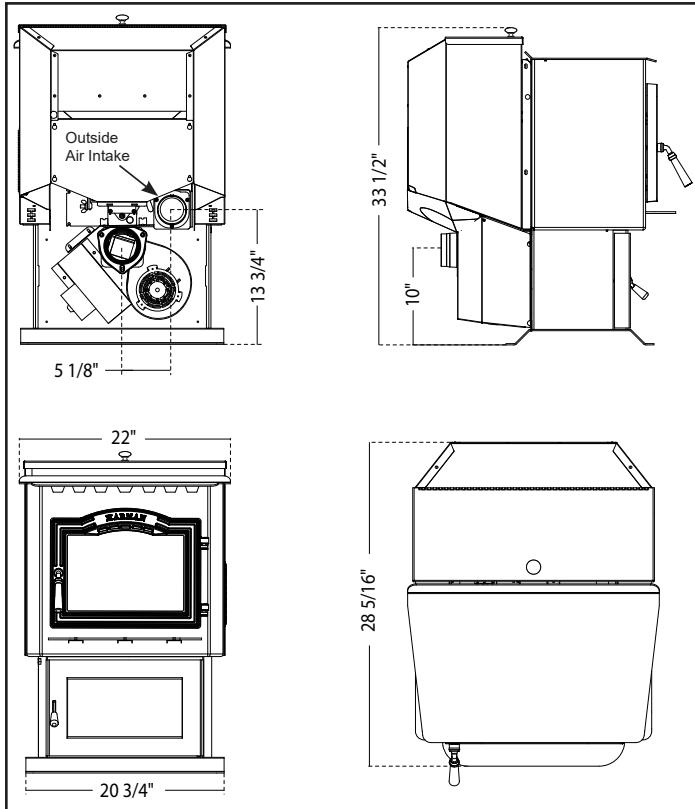

**Any such action may cause a fire hazard.**

# 3 Clearances

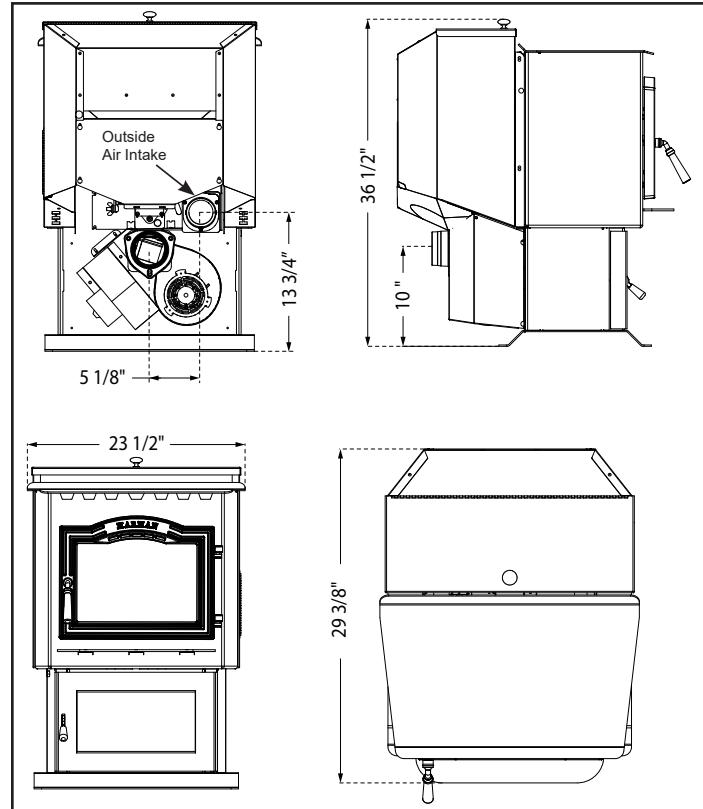

## A. Appliance Dimension Diagram

Dimensions are actual appliance dimensions. Use for reference only.

P43-C Freestanding Pellet Stove

P61-C Freestanding Pellet Stove

P68-C Freestanding Pellet Stove

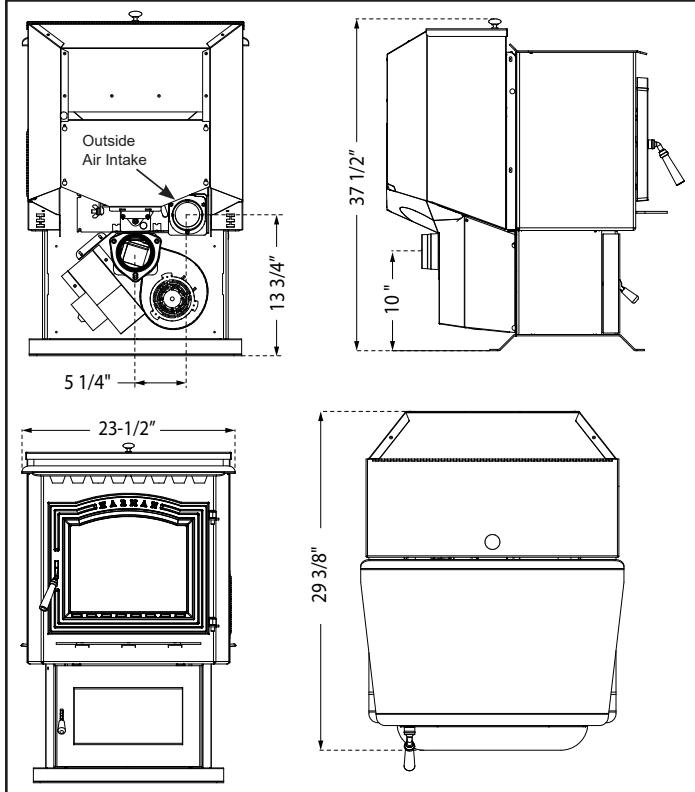

Figure 3.1

## B. Clearances to Combustibles

When selecting a location for the appliance it is important to consider the required clearances to walls, Figure 3.2.

### **! WARNING**

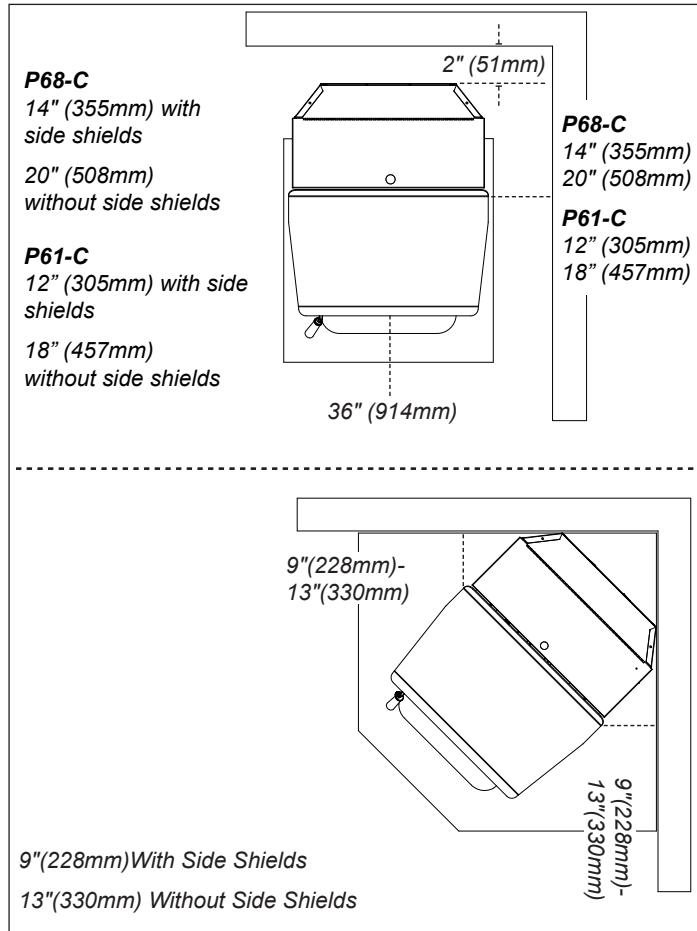

**RISK OF FIRE OR BURNS!** Provide adequate clearance around air openings and for service access. Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

### **! CAUTION**

**THIS APPLIANCE MUST BE VENTED TO THE OUTSIDE.**

**NOTICE:** Illustrations reflect typical installations and are FOR DESIGN PURPOSES ONLY. Actual installation may vary due to individual design preference.

#### P61-C & P68-C Freestanding Pellet Stove

Place the stove away from combustible walls at least as far as shown in Figure 3.2. Please note the difference in side wall clearance with and without side shields.

Note that the clearances shown are minimum for safety but do not leave much room for access when cleaning or servicing. Please take this into account when placing the stove.

Due to high temperatures, the stove should be placed out of traffic and away from furniture and draperies.

Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burns to skin and/or clothing.

Young children should be carefully supervised when they are in the same room as the stove.

Clothing and other flammable materials should not be placed on or near this unit.

#### P43-C Freestanding Pellet Stove

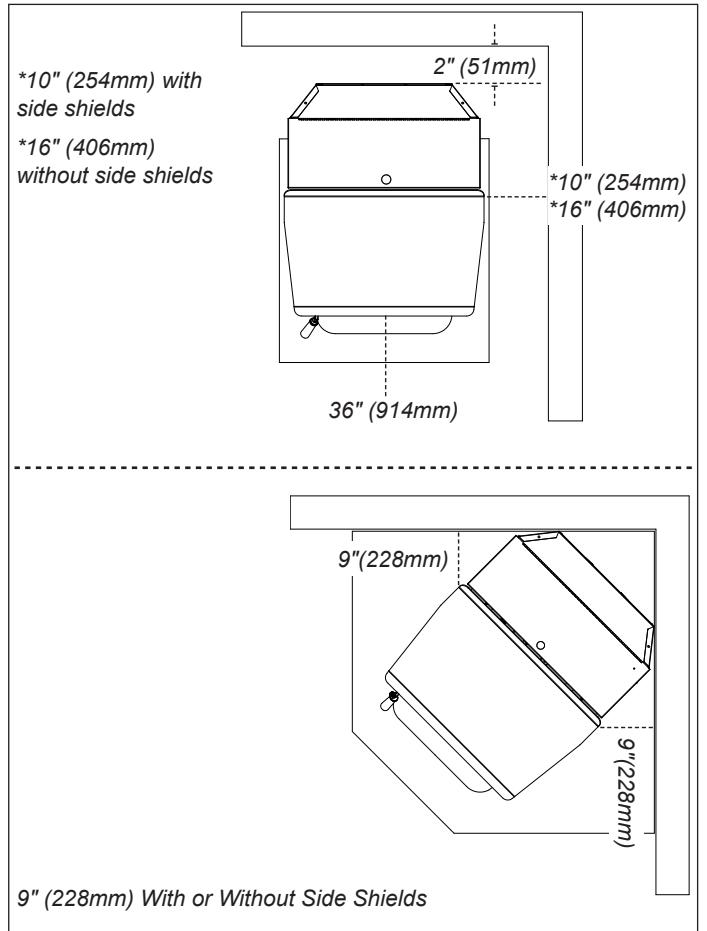

Figure 3.2

## C. Floor Protection

### CAUTION

Hearth and Home Technologies does not recommend adhesive based vinyl flooring due to thermal expansion. Floating-style flooring (LVP - luxury vinyl plank or LVT – luxury vinyl tile) can be used, but it will reach temperatures up to 110 °F in a room with ambient temperature of 70 °F. Consult flooring specifications to ensure compatibility.

HHT recommends wood stoves and inserts have 29 inches of alternative flooring in front of the stove before using LVP/LVT regardless if they sit flush on the floor or are elevated on a raised hearth.

For all other flooring, continue to follow clearance to combustible requirements in the installation manual.

**NOTICE:** Clearances that do not meet the minimum guidelines could result in damage or buckling to the vinyl flooring and is done at the installer's risk.

#### Parallel Installation:

Place the stove on a noncombustible type floor or floor protector that extends a minimum of 6 inches (152mm) to the front of the load door opening, 6 inches (152mm) to the sides of the door opening, and 6 inches to the rear.

The P-Series does not require R value floor protection.

The minimum floor protector material is 20 gauge sheet metal. Other floor protector materials that can be used include Type I hearth pads, ceramic tile, stone, brick, etc. Figure 3.3

\*Floor protection dimensions for the front and sides are measured from the appliance door opening in The United States. In Canada, the side dimension is measured from the widest part of the appliance.

**P43-C** - Minimum size rectangular floor protection is 25-7/16" Wide by 26-3/4" Deep (646mm X 680mm).

**P61-C** - Minimum size rectangular floor protection is 25-1/8" Wide by 27-3/4" Deep (638mm X 705mm).

**P68-C** - Minimum size rectangular floor protection is 25-3/16" Wide by 27-3/4" Deep (640mm X 705mm).

#### Venting:

**US** - Follow PL vent manufacturers recommendations when configuring vent pipe installation.

**Canada** - Must extend 2" (51mm) beyond each side of any horizontal flue pipe.

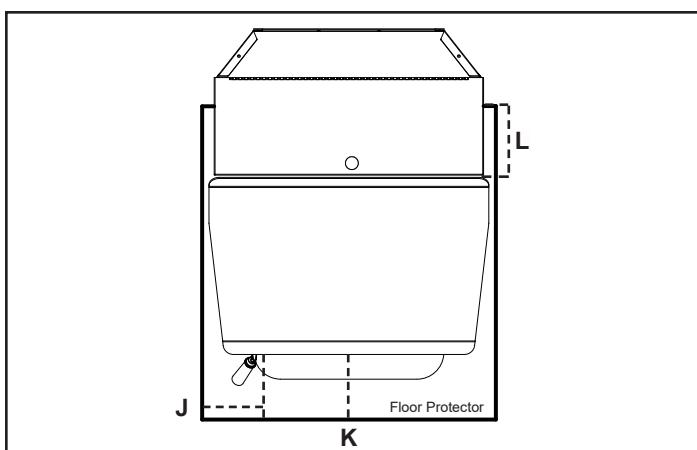

Figure 3.3

Floor Protection Requirements	US	Canada
J Sides	6"	152mm
K Front	6"	152mm
L Rear	6"	152mm

#### Corner Installation:

Minimum size floor protection for a corner installation hearth pad is:

**P43-C** - Minimum size floor protection is 25-7/16" Wide by 26-3/4" Deep (646mm X 680mm).

**P61-C** - Minimum size floor protection is 25-1/8" Wide by 27-3/4" Deep (638mm X 705mm).

**P68-C** - Minimum size floor protection is 25-3/16" Wide by 27-3/4" Deep (640mm X 705mm).

**Note:** Floor protector **WILL NOT** touch the wall using minimum clearances.

If corner floor protection is desired to touch the wall, the floor protection will need to be at least 40" x 40" (1016mm x 1016mm). **Note: This will allow the floor protection to touch the wall as shown. Figure 3.4.**

Alternate floor protector dimension may be used as long as they satisfy the measurement requirements shown below.

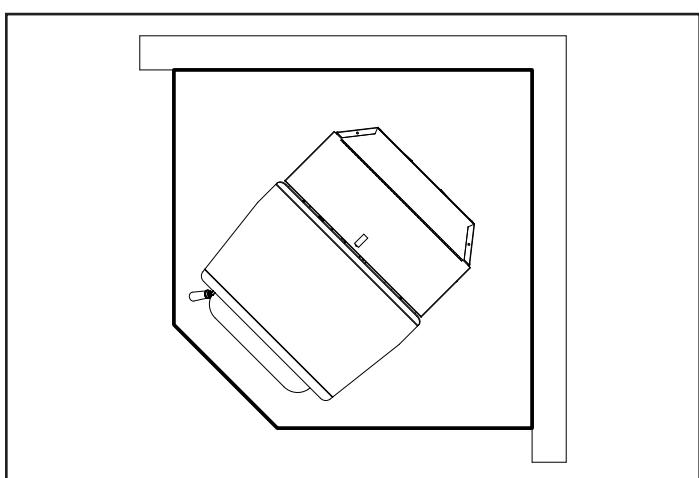

Figure 3.4

## D. Mobile Home Installation

When installing this unit in a mobile home, several requirements must be followed:

1. The unit must be bolted to the floor. This can be done using an appropriate fastener for the application.
2. The unit must also be connected to outside air. See "Termination Location and Vent Information" Section D.
3. Floor protection and clearances must be followed as shown.
4. The appliance must be properly grounded to the frame of the mobile home using a minimum of 8 AWG copper solid or stranded, insulated or bare wire or equivalent.

# 4 Termination Location and Vent Information

## A. Vent Termination Minimum Clearances

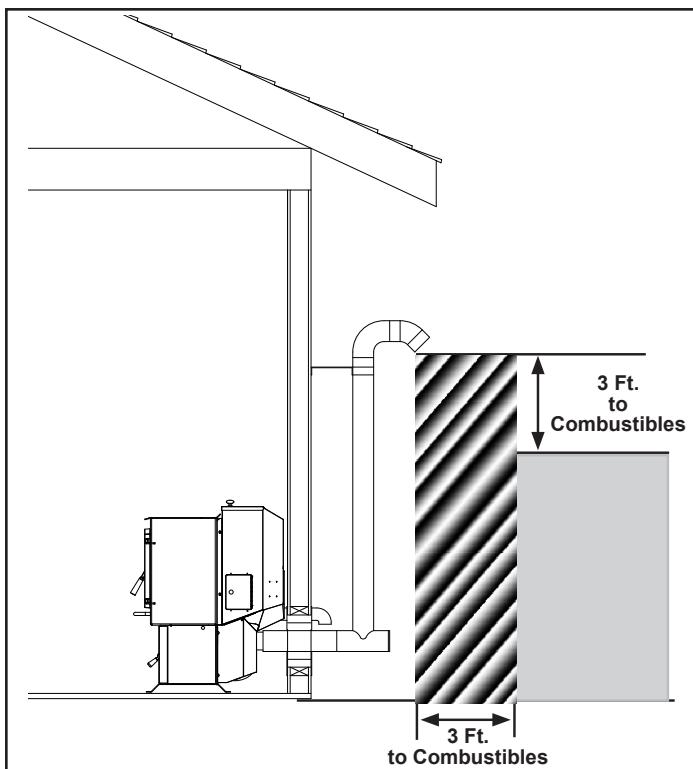

Figure 4.1

**Note:** Follow venting manufacturer's recommendations for sealing pipe joints.

### #1 Preferred method (Figure 4.1)

This method provides excellent venting for normal operation and allows the stove to be installed closest to the wall. Two inches from the wall is safe; however, four inches allows better access to remove the rear panel. The vertical portion of the vent should be three to five feet high. This vertical section will help provide natural draft in the event of a power failure.

**Do not place joints within wall pass-through.**

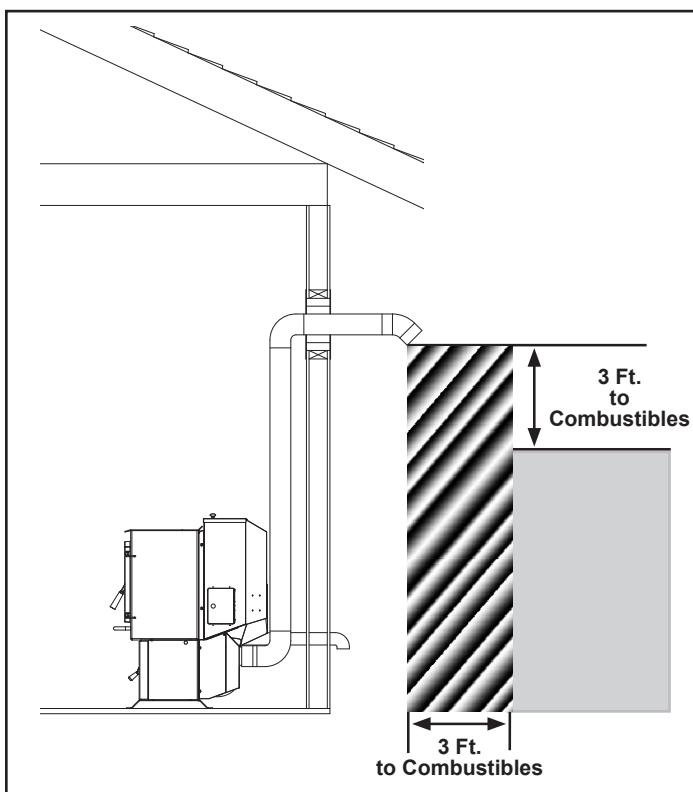

Figure 4.2

### #2 Preferred method (Figure 4.2)

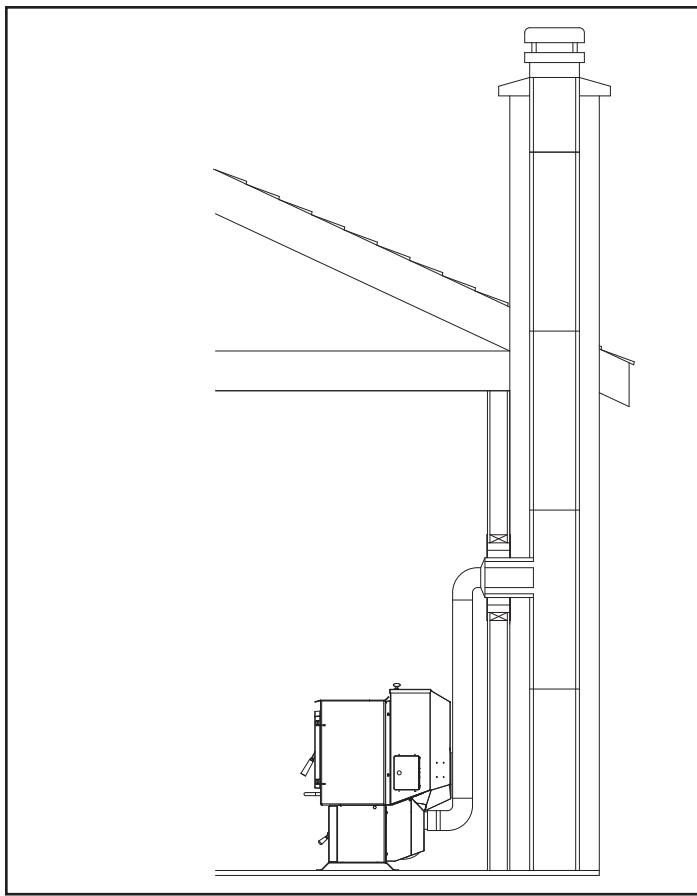

This method also provides excellent venting for normal operation but requires the stove to be installed farther from the wall. The vertical portion of the vent should be three to five feet high and at least 1" from a combustible wall. This vertical section will provide natural draft in the event of a power failure.

If the stove is installed below grade be sure the vent termination is at least 12" above grade. The outlet must also be 1 foot from the house/building.

**Do not place joints within wall pass-through.**

### CAUTION

Keep combustible materials (such as grass, leaves, etc.) at least 3 feet away from the flue outlet on the outside of the building.

**Figure 4.3**

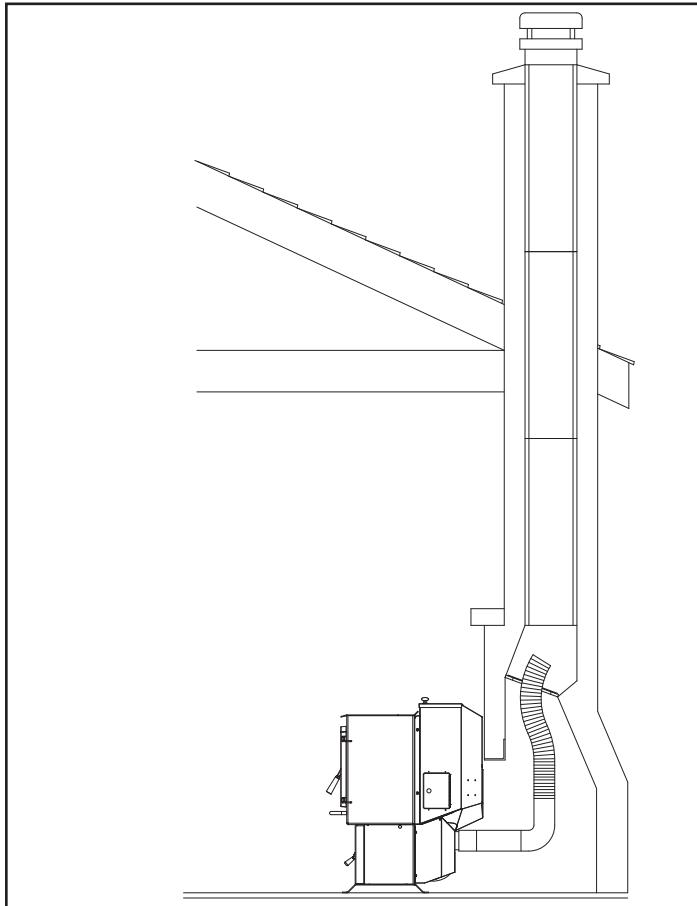

### #3 Installing into an existing chimney (Figure 4.3)

This method provides excellent venting for normal operation. This method also provides natural draft in the event of a power failure. If the chimney condition is questionable\* you may want to install a liner as in method #7.

In some places in the US and Canada it is required that the vent pipe extend all the way to the top of the chimney.

\*The chimney should be inspected and cleaned before installing your stove. If you discover that the chimney does not have a clay tile liner or has cracks or flaking of the tile liner you will need to install a stainless steel liner within the chimney. In most cases the inside diameter of this liner should be 4". Either flexible or rigid liner may be used for this purpose. Refer to Method 6 & 7.

Be sure to design the venting so that it can be easily cleaned.

**Figure 4.4**

### #4 Installing into an existing fireplace chimney (Figure 4.4)

This method provides excellent venting for normal operation. This method also provides natural draft in the event of a power failure. If the chimney condition is questionable\* you may want to install a liner as in method #6.

In some places in the US and Canada it is required that the vent pipe extend all the way to the top of the chimney.

\*The chimney should be inspected and cleaned before installing your stove. If you discover that the chimney does not have a clay tile liner or has cracks or flaking of the tile liner you will need to install a stainless steel liner within the chimney. In most cases the inside diameter of this liner should be 4". Either flexible or rigid liner may be used for this purpose. Refer to Method 5 & 6.

The chimney should be sealed at the damper using a steel plate. Kaowool, mineral wool or an equivalent non-combustible insulation is recommended to be installed on top of the sealing plate to reduce the possibility of condensation. The connector pipe should extend through the smoke chamber to the base or into the first flue tile.

Be sure to design the venting so that it can be easily cleaned.

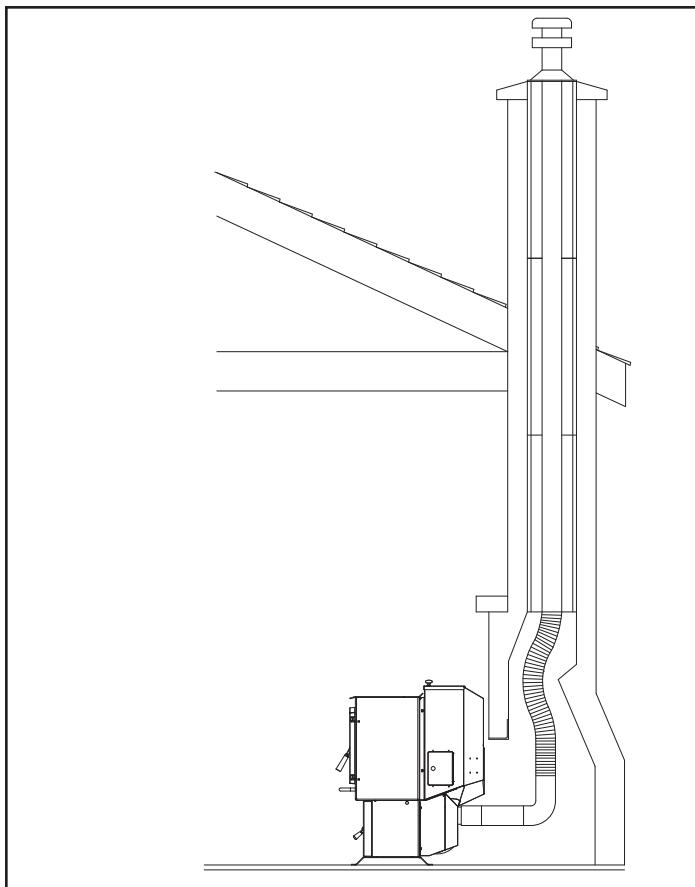

Figure 4.5

#### #5 Installing into an existing fireplace chimney (Figure 4.5) w/Full Liner

This method provides excellent venting for normal operation. This method also provides natural draft in the event of a power failure.

In some places in the US and Canada it is required that the vent pipe extend all the way to the top of the chimney. The pipe or liner inside the chimney should be 4" diameter.

In this method a cap should also be installed on the chimney to keep out rain. Be sure to use approved pellet vent pipe fittings. Pipe size should be increased to 4" using this method.

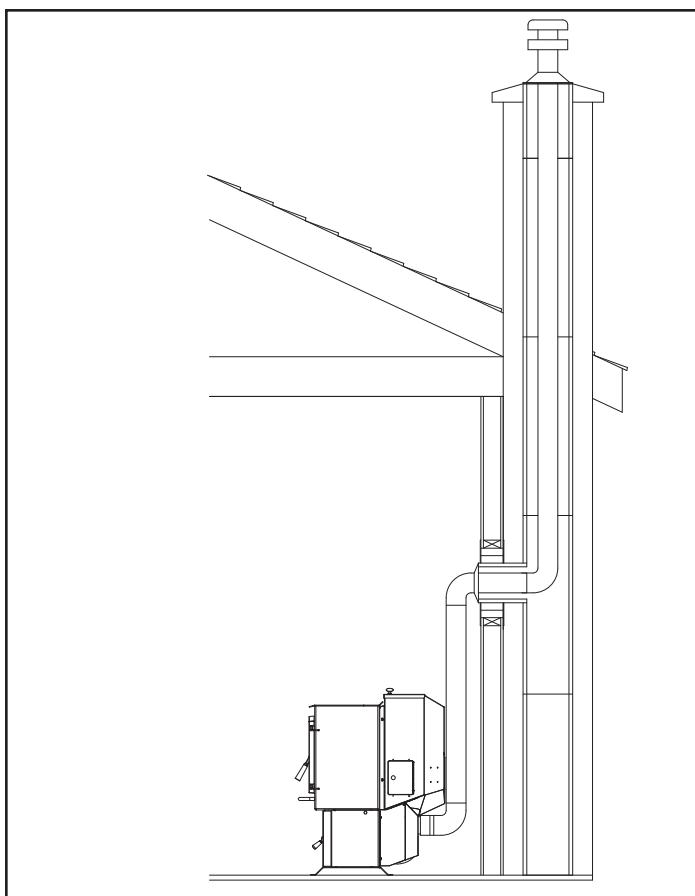

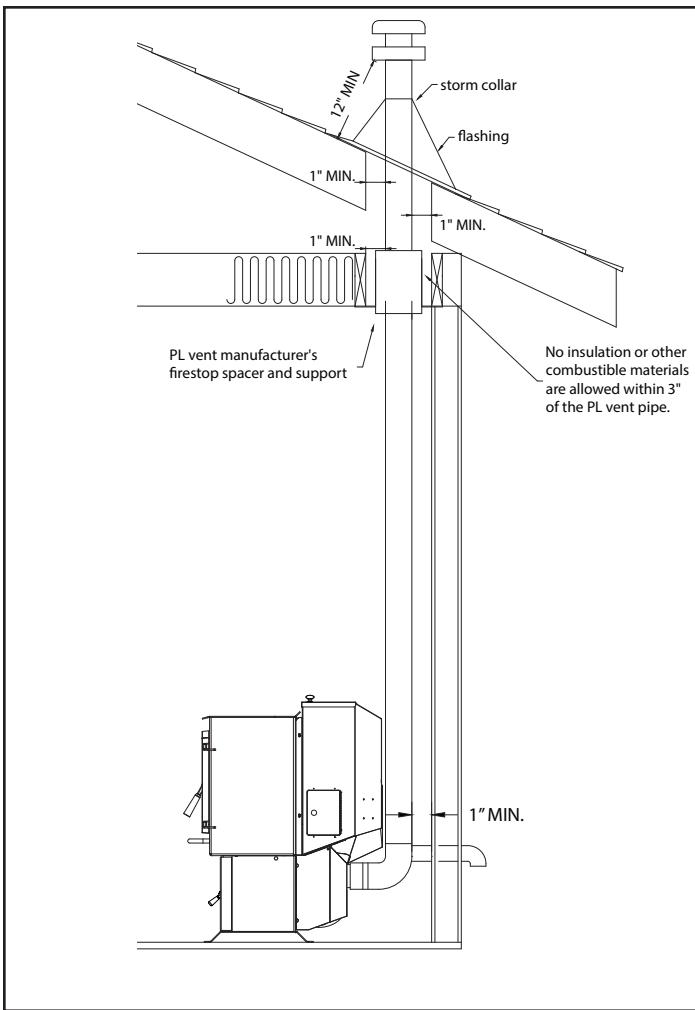

Figure 4.6

#### #6 Installing into an existing chimney (Figure 4.6) w/Full liner

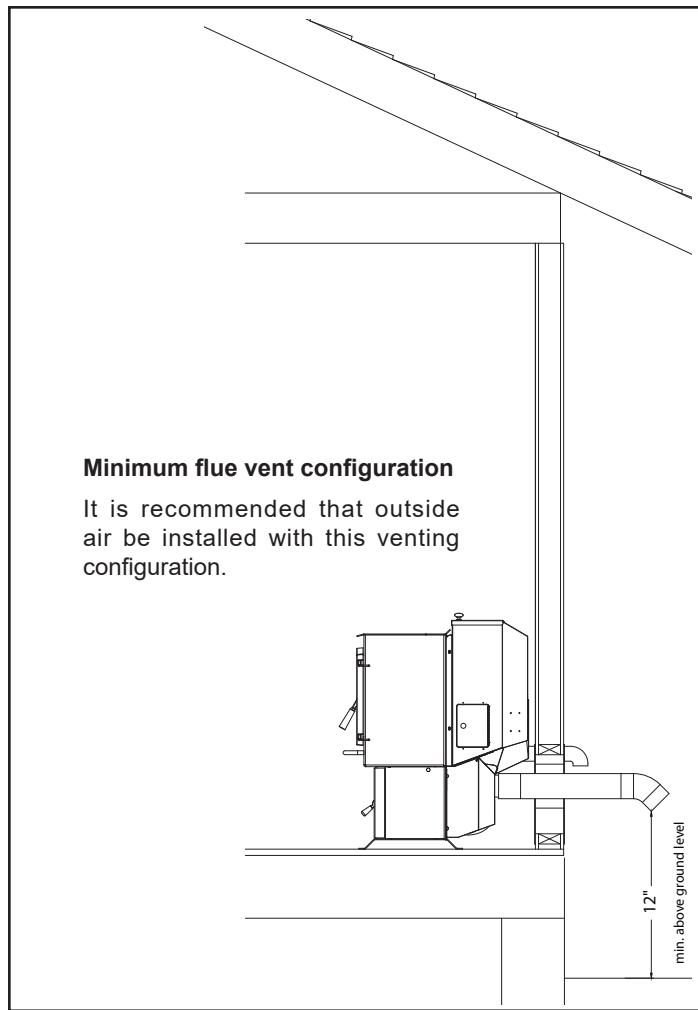

This method provides excellent venting for normal operation. This method also provides natural draft in the event of a power failure.

In some places in the US and Canada it is required that the vent pipe extend all the way to the top of the chimney. The pipe or liner inside the chimney should be 4" diameter.

In this method a cap should also be installed on the chimney to keep out rain.

**Figure 4.7**

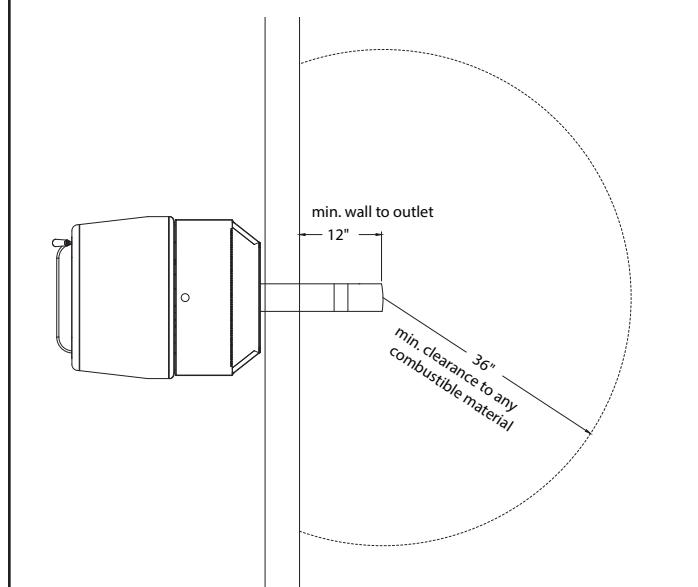

**Figure 4.8**

## #7 Installing through the ceiling

Through the ceiling vent, follow PL vent manufacturers recommendations when using wall and ceiling pass through.

**Do not place joints within wall pass-through.**

Area within dotted circle represents the minimum clearance to combustible materials such as shrubbery, mulch or tall grasses.

**Figure 4.9**

## B. Chimney Diagram

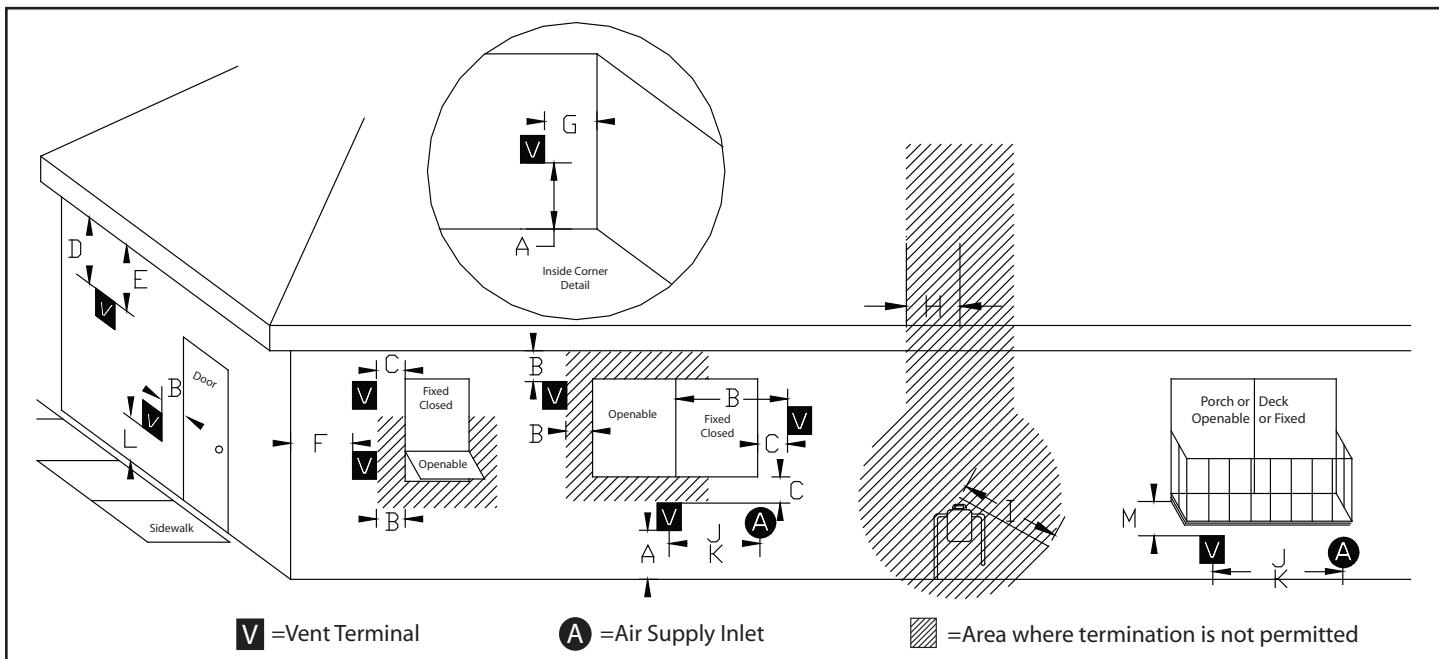

Figure 4.10

### Requirements for Terminating the Venting

- Venting terminals must not be recessed into a wall or siding.
- Only PL vent pipe wall pass-through and fire stops should be used when venting through combustible materials.
- Always take into consideration the effect the prevailing wind direction or other wind currents will cause with flyash and /or smoke when placing the termination.

In addition, the following must be observed:

- A. The clearance above grade must be a minimum of 12".
- B. The clearance to a window or door that may be opened must be a minimum of 48" to the side and 48" below the window/door, and 12" above the window/door. (**with outside air installed, 12" to side and below**)
- C. A 12" clearance to a permanently closed window is recommended to prevent condensation on the window.
- D. The vertical clearance to a ventilated soffit located above the terminal within a horizontal distance of 2 feet (60 cm) from the center-line of the terminal must be a minimum of 18".
- E. The clearance to an unventilated soffit must be a minimum of 12".
- F. The clearance to an outside corner is 11" from center of pipe.
- G. The clearance to an inside corner is 12".
- H. A vent must not be installed within 3 feet (90 cm) above a gas meter/regulator assembly when measured from the horizontal center-line of the regulator.

- I. The clearance to service regulator vent outlet must be a minimum of 6 feet.
- J. The clearance to a non-mechanical air supply inlet to the building or the combustion air inlet to any other appliance must be a minimum of 48".
- K. The clearance to a mechanical air supply inlet must be a minimum of 10 feet. (**with outside air installed, 6 feet**)
- L. The clearance above a paved sidewalk or a paved driveway located on public property must be a minimum of 7 feet.
- M. The clearance under a veranda, porch, deck or balcony must be a minimum of 12 inches. (**B. also**)

**Note: The clearance to vegetation and other exterior combustibles such as mulch is 36" as measured from the center of the outlet or cap. This 36" radius continues to grade.**

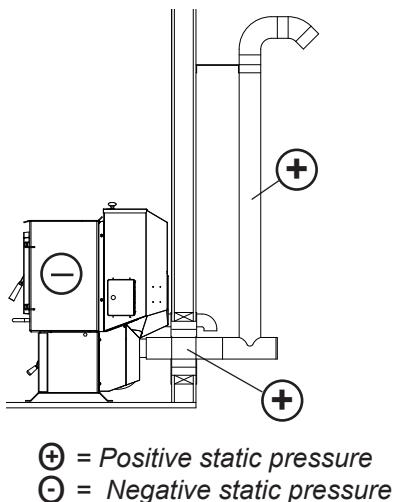

Certain Canadian and or Local codes or regulations may require different clearances.

A vent shall not terminate directly above a side-walk or paved driveway which is located between two single family dwellings and serves both dwellings.

Only permitted if veranda, porch, deck, or balcony is fully open on a minimum of 2 sides beneath the floor.

**See NFPA 211 for more installation clearance reductions when using outside air. Where passage through a wall, or partition of combustible construction is desired, the installation shall conform to CAN/CSA-B365. (if in Canada)**

## C. Venting & Use of Elbows

**Figure 4.11**

Harman pellet stoves depend on a combustion fan to pull air through the unit for combustion. The venting system restricts the ability of the combustion fan to move the required amount of air through the unit. A system with too much resistance will result in incomplete combustion, more frequent required cleaning and poor unit performance. It is always best to choose a location for the appliance that will result in a venting system with the shortest equivalent vent length (EVL).

It is best to have your venting system designed by a Harman authorized dealer before you finalize your purchase of an appliance.

**Equivalent Vent Length: The equivalent vent length for common pellet vent components are:**

- 90° Elbows or Tee: 5 EVL Units
- 45° elbow: 3 EVL Units
- Vertical Pipe or Liner: ½ EVL Unit
- Horizontal Pipe or liner: 1 EVL Unit

**The total allowable equivalent vent length is:**

- 20 EVL for 3" pellet vent pipe or liner
- 30 EVL for 4" pellet vent pipe or liner

Due to the potential for fly ash accumulation in horizontal venting sections, the maximum permissible horizontal venting length is:

- 4 ft. for 3" & 4" pellet vent pipe.

**Example: First Floor Installation**

A unit is to be installed using 3" Pellet Pipe with 3 feet of horizontal pipe, a Tee, 10 feet of vertical pipe, a 90° elbow and a termination cap.

**The equivalent vent length is:**

3 ft. of Horizontal Pipe (1 x 3 EVL)	= 3 EVL
90° Elbow or Tee (1 x EVL)	= 5 EVL
10 ft. of Vertical Pipe (10 x .5 EVL)	= 5 EVL
90° Elbow or Tee (1 x EVL)	= 5 EVL
<u>Termination Cap</u>	<u>= 0 EVL</u>
Equivalent Vent Length	= 18 EVL

In the example system detailed above, the EVL was 138 which is less than the maximum of 20 EVL for 3" pellet vent pipe, thus this is a satisfactory venting configuration.

**Example: Connection to Masonry Chimney**

A unit is to be installed using 3" Pellet Pipe with 2 feet of horizontal pipe, a Tee, 4 feet of vertical pipe, an elbow, a Tee, 21 feet of vertical liner, and a termination cap.

**The equivalent vent length is:**

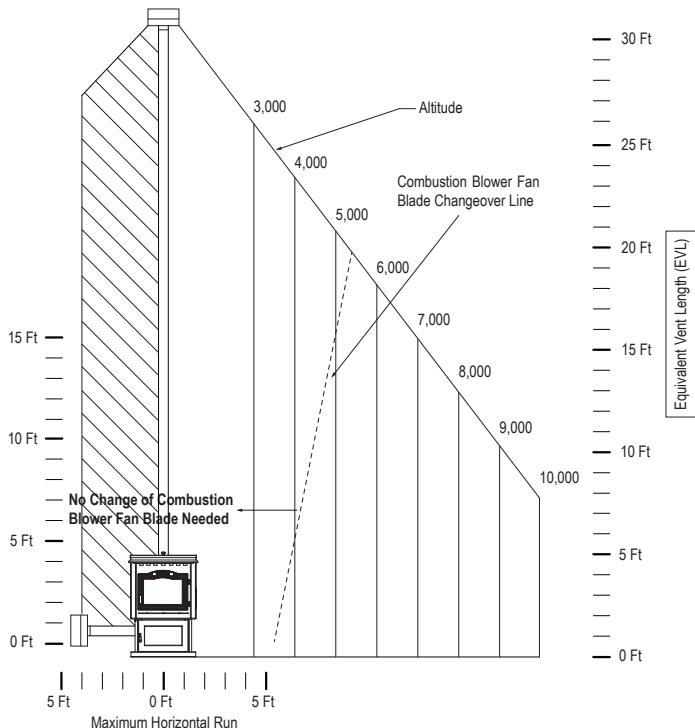

2 ft. of Horizontal Pipe (1 x 2 EVL)	= 2 EVL
90° Tee (1 x 5 EVL)	= 5 EVL
4 ft. of Vertical Pipe (4 x .5 EVL)	= 2 EVL
90° Elbow (1 x 5 EVL)	= 5 EVL
90° Tee (1 x 5 EVL)	= 5 EVL
21 ft. of Vertical Liner (21 x .5 EVL)	= 10.5 EVL
<u>Termination Cap</u>	<u>= 0 EVL</u>
Equivalent Vent Length	= 29.5 EVL

In the example system detailed above, the EVL was 29.5 which exceeds the maximum of 20 ft. for 3" pellet vent pipe, thus 3" vent pipe should not be used in this installation. However, since 4" pipe can support an EVL up to 30, the use of 4" pipe would create a satisfactory installation.

## C. Venting & Use of Elbows *continued*

**Note:** When the amount of vertical pellet vent pipe in the system exceeds 15 feet, 4" pellet vent pipe should be used.

**Note:** Equivalent Venting Length decreases as altitude increases.

### Example:

A unit with an EVL of 13, is to be installed at an altitude of 3,000 feet above sea level.

From the chart to the left, at 3,000 feet of altitude, the maximum permissible equivalent venting length is 26 feet. Therefore this would be an acceptable installation with no need to change the combustion blower fan.

However, if the same unit (EVL 13) was to be installed at an altitude of 9,000 feet above sea level, the installation would no longer be acceptable and the equivalent vent length of the pipe would have to be reduced for proper unit operation.

- Long runs of flex or PL vent pipe installed directly vertical from the flue stub may require more frequent cleaning due to fly ash falling off inside and collecting directly above the combustion blower outlet.
- 4" stainless steel flex vent piping is only allowed for use in masonry fireplaces and chimneys or factory built wood-burning fireplaces with Class A metal chimneys.
- All pellet vent pipe must be secured together either by means provided by pipe manufacturer or by 3 screws at each joint.
- Use only the specified venting components. Use of any other components will void the product warranty and may pose a hazard.
- Do Not Install a Flue Damper In The Exhaust Venting System of This Appliance.
- DO NOT CONNECT THIS UNIT TO A CHIMNEY FLUE SERVING ANOTHER APPLIANCE.
- **NOTE:** Simpson DuraVent PelletVent Pro Harman®Adapter Part #3PVP-ADHB and PelletVent Pro Harman®Adapter Increaser Part #3PVPX4ADHB are highly recommended to be installed on the starter collar to insure a proper pipe connection to the unit.
- **INSTALL VENT AT CLEARANCES SPECIFIED BY THE VENT MANUFACTURER**
- Use silicone to create an effective vapor barrier at the location where the chimney or outside air ducting passes through to the exterior of the structure

## D. Outside Air

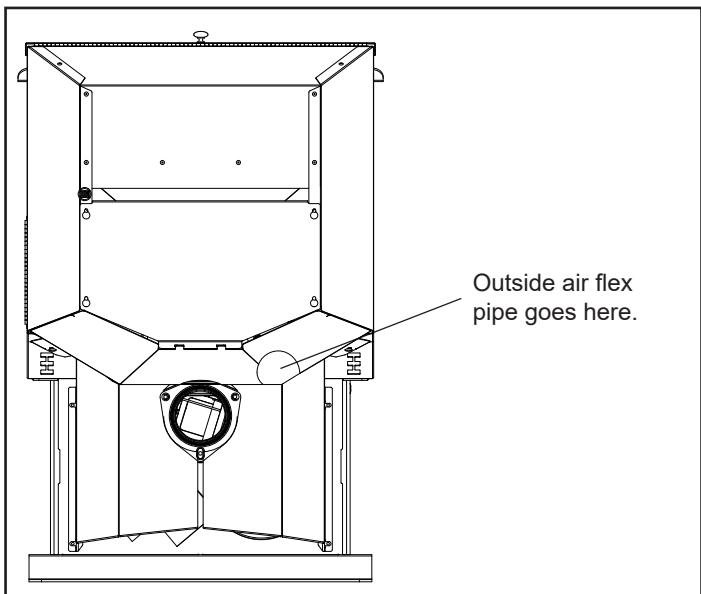

Figure 4.12

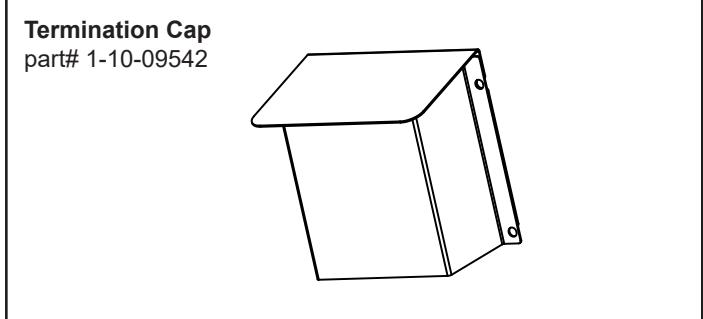

Figure 4.13

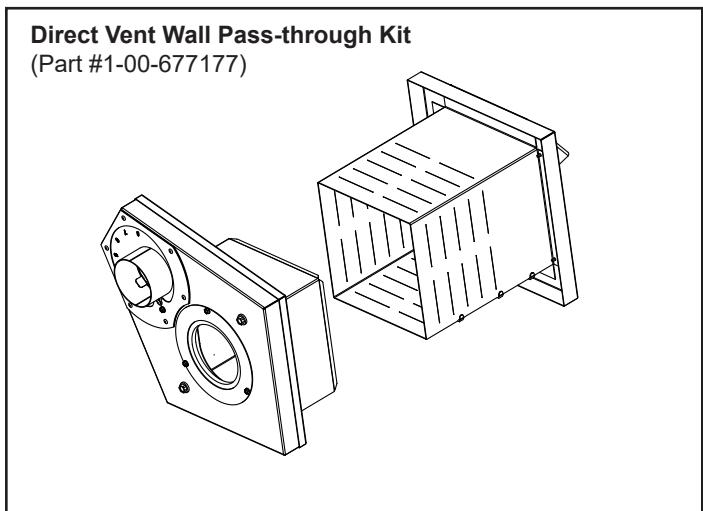

Figure 4.14

### Outside Air:

**Hearth & Home Technologies recommend attaching outside air in all installations, especially lower level and main floor locations.**

Per national building codes, consideration must be given to combustion air supply to all combustion appliances. Failure to supply adequate combustion air for all appliance demands, may lead to back-drafting of those and other appliances.

When the appliance is side-wall vented: The air intake is best located on the same exterior wall as the exhaust vent outlet and located lower on the wall than the exhaust vent outlet.

When the appliance is roof vented: The air intake is best located on the exterior wall oriented towards the prevailing wind direction during the heating season.

The outside air connection will supply the demands of the pellet appliance, but consideration must be given to the total house demand. House demand may consume some air needed for the stove, especially during a power failure. It may be necessary to add additional ventilation to the space in which the pellet appliance is located. Consult with your local HVAC professional to determine the ventilation demands for your house.

To install outside air use 3". non-combustible flex pipe Figure 4.13. There is a break-away hole on the rear panel of the P-Series stove which must be removed before connecting the flex pipe. Figure 4.12. The pipe should be run outside and terminate to the side or below the vent pipe outlet so the flue outlet is more than 12" from the inlet cover. The Termination Cap should be used to keep birds, rodents, etc. out of the pipe Figure 4.13.

You may choose to use the optional Direct Vent Wall Pass-through Kit which incorporates the venting pass-through and outside air inlet into one component. Figure 4.14.

**Use silicone to create an effective vapor barrier at the location where the chimney or outside air ducting passes through to the exterior of the structure.**

## E. Locating Your Appliance & Chimney

Location of the appliance and chimney will affect performance.

- Install through the warm airspace enclosed by the building envelope. This helps to produce more draft, especially during lighting and die-down of the fire.
- Penetrate the highest part of the roof. This minimizes the effects of wind loading.
- Locate termination cap away from trees, adjacent structures, uneven roof lines and other obstructions.
- Minimize the use of chimney offsets.
- Consider the appliance location relative to floor and ceiling and attic joists.

### CAUTION

- DO NOT CONNECT THIS UNIT TO A CHIMNEY FLUE SERVICING ANOTHER APPLIANCE.
- DO NOT CONNECT TO ANY AIR DISTRIBUTION DUCT OR SYSTEM.

May allow flue gases to enter the house

## F. Draft

Draft is the pressure difference needed to vent appliances successfully. When an appliance is drafting successfully, all combustion by products are exiting the home through the chimney.

Considerations for successful draft include:

- Preventing negative pressure
- Location of appliance and chimney

To measure the draft or negative pressure on your appliance use a magnahelic or a digital pressure gauge capable of reading 0 - 1 inches of water column (W.C.).

The appliance should be running on high for at least 15 minutes for the test.

With the stove running on high you should have a negative pressure equal to or greater than the number given in the chart below. If you have a lower reading than you find on the chart, your appliance does not have adequate draft to burn the fuel properly.

#### Minimum Vacuum Requirements:

.35 - .55

Prior to installing the flue pipe, connect a draft meter. (The draft meter must have a minimum range of 0 - .5") Record the first reading. Connect flue pipe to stove and be sure all doors and windows in the home are closed. Record the second draft reading \_\_\_\_\_. If the second reading is more than .05" lower than the first reading, check for possible restrictions or the need for outside air. For more information on the draft test procedure, refer to Page 21

## G. Negative Pressure

### WARNING

**Risk of Asphyxiation!** Negative pressure can cause spillage of combustion fumes and soot.

Negative pressure results from the imbalance of air available for the appliance to operate properly. It can be strongest in lower levels of the house.

Causes include:

- Exhaust fans (kitchen, bath, etc.)
- Range hoods
- Combustion air requirements for furnaces, water heaters and other combustion appliances
- Clothes dryers
- Location of return-air vents to furnace or air conditioning
- Imbalances of the HVAC air handling system
- Upper level air leaks such as:
  - Recessed lighting
  - Attic hatch
  - Duct leaks

To minimize the effects of negative air pressure:

- Install the outside air kit with the intake facing prevailing winds during the heating season
- Ensure adequate outdoor air for all combustion appliances and exhaust equipment
- Ensure furnace and air conditioning return vents are not located in the immediate vicinity of the appliance
- Avoid installing the appliance near doors, walkways or small isolated spaces
- Recessed lighting should be a "sealed can" design
- Attic hatches weather stripped or sealed
- Attic mounted duct work and air handler joints and seams taped or sealed

**NOTICE:** Hearth & Home Technologies assumes no responsibility for the improper performance of the chimney system caused by:

- Inadequate draft due to environmental conditions
- Downdrafts
- Tight sealing construction of the structure
- Mechanical exhausting devices

## H. Avoiding Smoke and Odors

### Negative Pressure, Shut-down, and Power Failure:

To reduce the probability of back-drafting or burn-back in the pellet burning appliance during power failure or shut-down conditions, the stove must be able to draft naturally without exhaust blower operation. Negative pressure in the house will resist this natural draft if not accounted for in the pellet appliance installation.

Heat rises in the house and leaks out at upper levels. This air must be replaced with cold air from outdoors, which flows into lower levels of the house. Vents and chimneys into basements and lower levels of the house can become the conduit for air supply, and reverse under these conditions.

### Outside Air

An outside air kit is recommended in all installations. The Outside Air Kit must be ordered separately.

Per national building codes, consideration must be given to combustion air supply to all combustion appliances. Failure to supply adequate combustion air for all appliance demands may lead to back drafting of those and other appliances.

When the appliance is roof vented (strongly recommended):

The air intake is best located on the exterior wall oriented towards the prevailing wind direction during the heating season.

When the appliance is side-wall vented:

The air intake is best located on the same exterior wall as the exhaust vent outlet and located lower on the wall than the exhaust vent outlet.

The outside air supply kit can supply most of the demands of the pellet appliance, but consideration must be given to the total house demand.

House demand may consume the air needed for the appliance. It may be necessary to add additional ventilation to the space in which the pellet appliance is located.

Consult with your local HVAC professional to determine the ventilation demands for your house.

### Vent Pipe

Be sure to use approved pellet vent pipe wall and ceiling pass-through fittings to go through combustible walls and ceilings. Be sure to use a starting collar to attach the venting system to the stove. The starting collar must be secured to the flue stub with at least three screws, and sealed with high temp silicone caulking.

4" stainless steel flex vent piping is only allowed for use in masonry fireplaces and chimneys or factory built wood burning fireplaces with class A metal chimneys.

Pellet venting pipe (also known as Type L vent) is constructed of two layers with air space between the layers. This air space acts as an insulator and reduces the outside surface temperature to allow a clearance to combustibles of only 1 inch. The sections of pipe lock together to form an air tight seal in most cases. Follow venting manufacturer's recommendations for sealing pipe joints.

Where passing through an exterior wall or roof, be sure to use the appropriate pass-through device providing an adequate vapor barrier. Venting manufacturers generally provide these pass-through devices.

### Vent Configurations:

To reduce probability of reverse drafting during shut-down conditions, Hearth & Home Technologies strongly recommends:

- Installing the pellet vent with a minimum vertical run of five feet, preferably terminating above the roof line.
- Installing the outside air intake at least four feet below the vent termination.

To prevent soot damage to exterior walls of the house and to prevent re-entry of soot or ash into the house:

- Maintain specified clearances to windows, doors, and air inlets, including air conditioners.
- Vents should not be placed below ventilated soffits. Run the vent above the roof.
- Avoid venting into alcove locations.
- Vents should not terminate under overhangs, decks or onto covered porches.
- Maintain minimum clearance of 12 inches from the vent termination to the exterior wall. If you see deposits developing on the wall, you may need to extend this distance to accommodate your installation conditions.

**Hearth & Home Technologies assumes no responsibility for, nor does the warranty extend to, smoke damage caused by reverse drafting of pellet appliances under shut-down or power failure conditions.**

## I. Fire Safety

To provide reasonable fire safety, the following should be given serious consideration:

- Install at least one smoke detector and CO detector on each floor of your home.
- Locate smoke detector away from the heating appliance and close to the sleeping areas.
- Follow the smoke detector manufacturer's placement and installation instructions and maintain regularly.
- Conveniently locate a Class A fire extinguisher to contend with small fires.
- In the event of a hopper fire:
  - Evacuate the house immediately.
  - Notify fire department.

### WARNING

#### Fire Risk.

Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by the following actions:

- Installation and use of any damaged appliance.
- Modification of the appliance.
- Installation other than as instructed by Hearth & Home Technologies.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.
- Operating appliance without fully assembling all components.
- Do NOT Overfire.

Or any such action that may cause a fire hazard.

## J. Inspect Appliance & Components

- Remove appliance and components from packaging and inspect for damage.
- Report to your dealer any parts damaged in shipment.
- **Read all the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.**

### WARNING

Inspect appliance and components for damage.  
Damaged parts may impair safe operation.

- Do NOT install damaged components.
- Do NOT install incomplete components.
- Do NOT install substitute components.

Report damaged parts to dealer.

This wood heater needs periodic inspection and repair for proper operation. It is against federal regulations to operate this wood heater in a manner inconsistent with operating instructions in this manual.

### WARNING

**THIS WOOD HEATER HAS A MANUFACTURER-SET MINIMUM LOW BURN RATE THAT MUST NOT BE ALTERED. IT IS AGAINST FEDERAL REGULATIONS TO ALTER THIS SETTING OR OTHERWISE OPERATE THIS WOOD HEATER IN A MANNER INCONSISTENT WITH OPERATING INSTRUCTIONS IN THIS MANUAL.**

# 5 Appliance Set-Up

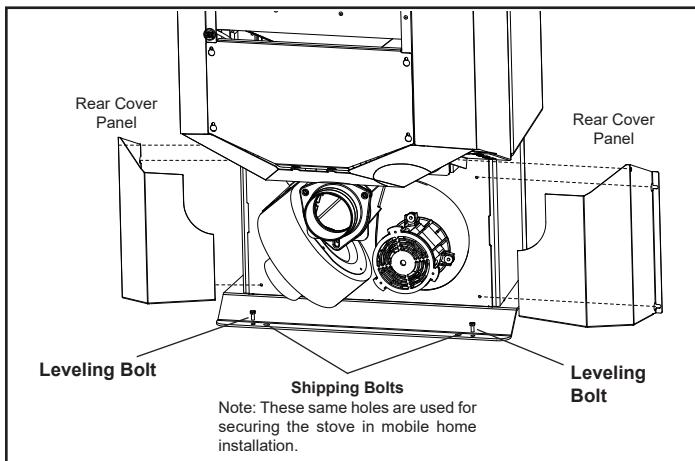

Figure 5.1

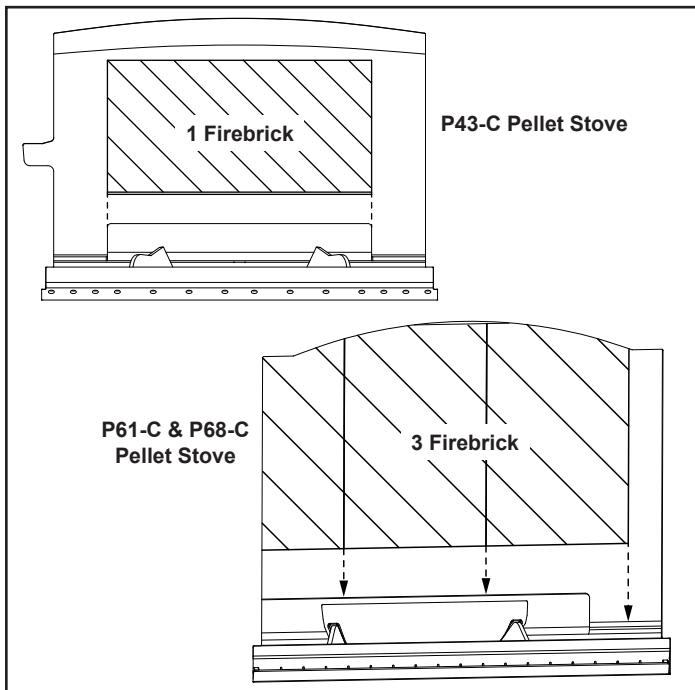

Figure 5.2

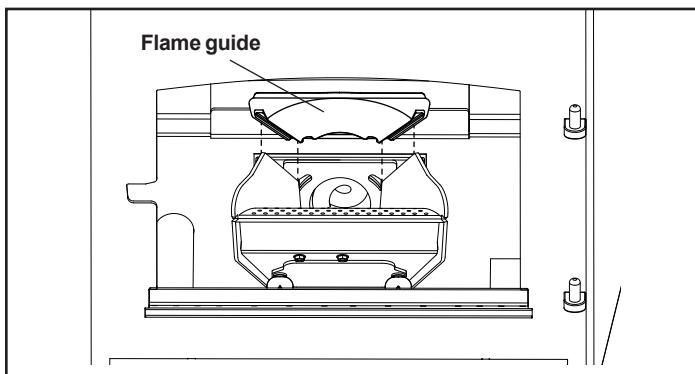

Figure 5.3

## A. Unpacking

The P-Series is bolted (1/4 x 1" hex head bolts) to the skid to prevent movement during shipping.

To free the stove from the skid you must remove the hold-down bolts in the rear of the pedestal base using a 7/16" socket or wrench. Figure 5.1.

## B. Removing Rear Cover Panels

The rear cover panels are secured to the stove with three screws each. Two of the screws need only be loosened, not removed, to remove the panels. It is recommended that the rear covers are installed using a 5/16" socket, wrench or nut driver after the unit is in place and the vent pipe is installed, to prevent contact with hot or moving parts.

If needed, install the (2) 5/16-18 X 3/4" leveling bolts located in the hardware kit. Figure 5.1.

## C. Firebrick

The P43-C Pellet Stove has a single (1) firebrick that gets installed horizontally on the angle bracket above the burnpot. The P61-C and P68-C have three (3) firebrick that get installed vertically on the angle bracket. Figure 5.2.

## D. Flame Guide

Install the cast iron flame guide on top of the burn pot. Make sure that the flame guide is fully seated on the vertical sides of the burn pot and that the back of the guide rests against the body of the stove. Figure 5.3.

## E. Room Sensor Installation

The room sensor is a small temperature sensor on the end of a 60" wire. This sensor is installed much like a standard wall thermostat. There is a remote room sensor port on the rear of the unit for easy external connection. Use standard 18-2 thermostat wire to extend the sensor to the desired location (50' maximum). The room sensor should be installed in the location where you want to control the temperature.

**NOTE:** Distances of more than 25 feet from the unit or in another room are not recommended. The room sensor is essential for the P-Series excellent efficiency.

**NOTE:** It is recommended that the room sensor be installed, even if only installed on the rear of the unit as a return air sensor.

## F. Low Draft Voltage Adjustment

These units are pre-tested at the factory with exactly 120 VAC, 60 Hz. They are checked and adjusted for firebox tightness, gasket leakage, motor operation and igniter operation. The P-Series is then factory set at a mid-point adjustment and in most cases will not need any adjustments.

**NOTE: The factory low draft setting may not be correct for the unit's permanent installation conditions.**

The control board on the P-Series is equipped with a low draft adjustment port located on the control face just to the right of the igniter light. Figure 5.4. This voltage adjustment is provided to allow the unit to be adjusted for the household voltage where the unit is going to be in permanent operation.

**NOTE: The line voltage varies from area to area and often home to home.**

The low draft voltage should be adjusted to achieve the most efficient burn on low burn or "maintenance". This voltage adjustment allows the installer to change the low voltage set point approximately 10 volts. This adjustment should be done by the installer during set up because a draft meter reading is required to insure proper set up.

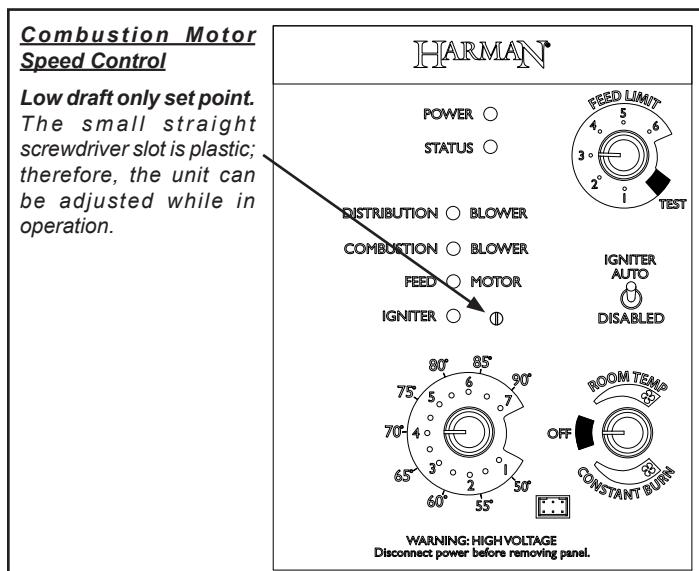

Figure 5.4

If the unit is not adjusted properly, it does not cause a safety concern. If the unit is adjusted too high, only efficiency is lost. If the unit is adjusted too low, the low draft pressure switch will not allow the feed motor or the igniter to operate.

A simple draft test should be performed after completing the flue pipe installation. To record the results for future reference:

1. Plug unit into a 120 VAC, 60 HZ outlet.
2. Close the hopper lid, front view door, and the ash pan door. Neither pellets or a fire are required for this test.
3. With the mode selector in the "OFF" position, turn the feed adjuster to "TEST".
4. Record the high draft \_\_\_\_\_ in W.C. (Normal is -.50 to -.60) The control will be on the High Draft for a total of 2 minutes.
5. After 1 minute, the combustion motor will go down to low draft and the distribution blower will go on high. Allow approximately 15 seconds to pass for the combustion motor to slow before checking the low draft.
6. If the low draft is between -.35 and -.45, record the reading \_\_\_\_\_ in W.C. If the reading is higher, slowly turn the set screw counter-clockwise until the draft lowers. If the reading is lower, very slowly turn the set screw clockwise until the draft increases.

**NOTE: In some cases, the draft may not go as low as -.35 to -.45 even with the set screw completely counter-clockwise. Ideally, you should just set it as low as possible.**

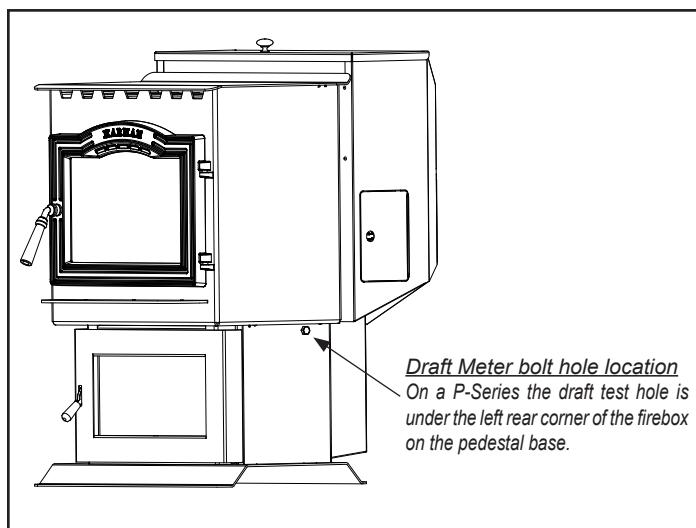

Figure 5.5

Connect the power cord to a 120 VAC, 60 Hz grounded receptacle. (A surge protector is recommended to protect the circuit board.) Also be sure that the polarity of the outlet that the stove is plugged into is correct.

# **6** Reference Material

## **A. Safety Reminders**

When installing and operating your Harman® P-Series, respect basic safety standards. Read these instructions carefully before you attempt to install or operate the P-Series. Failure to do so may result in damage to property or personal injury and may void the product warranty.

Consult with your local building code agency and insurance representative before you begin your installation to ensure compliance with local codes, including the need for permits and follow-up inspections.

### **CAUTION**

**This appliance must be vented to the outside.**

Due to high temperatures, this stove should be placed out of traffic and away from furniture and draperies.

Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burn to skin and/or clothing.

Young children should be carefully supervised when they are in the same room as the stove.

Clothing and other flammable materials should not be placed on or near this stove.

Installation and repair of this stove should be done by a qualified service person. The appliance should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required. It is imperative that control compartments, burners, and circulating air passageways of this stove be kept clean.

### **CAUTION**

**WHEN THIS ROOM HEATER IS NOT PROPERLY INSTALLED, A HOUSE FIRE MAY RESULT. TO REDUCE THE RISK OF FIRE, FOLLOW THE INSTALLATION INSTRUCTIONS. CONTACT LOCAL BUILDING OR FIRE OFFICIALS ABOUT RESTRICTIONS AND INSTALLATION INSPECTION REQUIREMENTS IN YOUR AREA.**

### **CAUTION**

**THE STRUCTURAL INTEGRITY OF THE MOBILE HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED.**

### **CAUTION**

**THE STOVE IS HOT WHILE IN OPERATION.  
KEEP CHILDREN, CLOTHING AND FURNITURE AWAY. CONTACT MAY CAUSE SKIN BURNS.**

### **WARNING**

**MOBILE/MANUFACTURED HOME GUIDELINES DO NOT ALLOW INSTALLATION IN A SLEEPING ROOM.**

### **WARNING**

**KEEP COMBUSTIBLE MATERIALS SUCH AS GRASS, LEAVES, ETC. AT LEAST 3 FEET AWAY FROM THE POINT DIRECTLY UNDER THE VENT TERMINATION.**

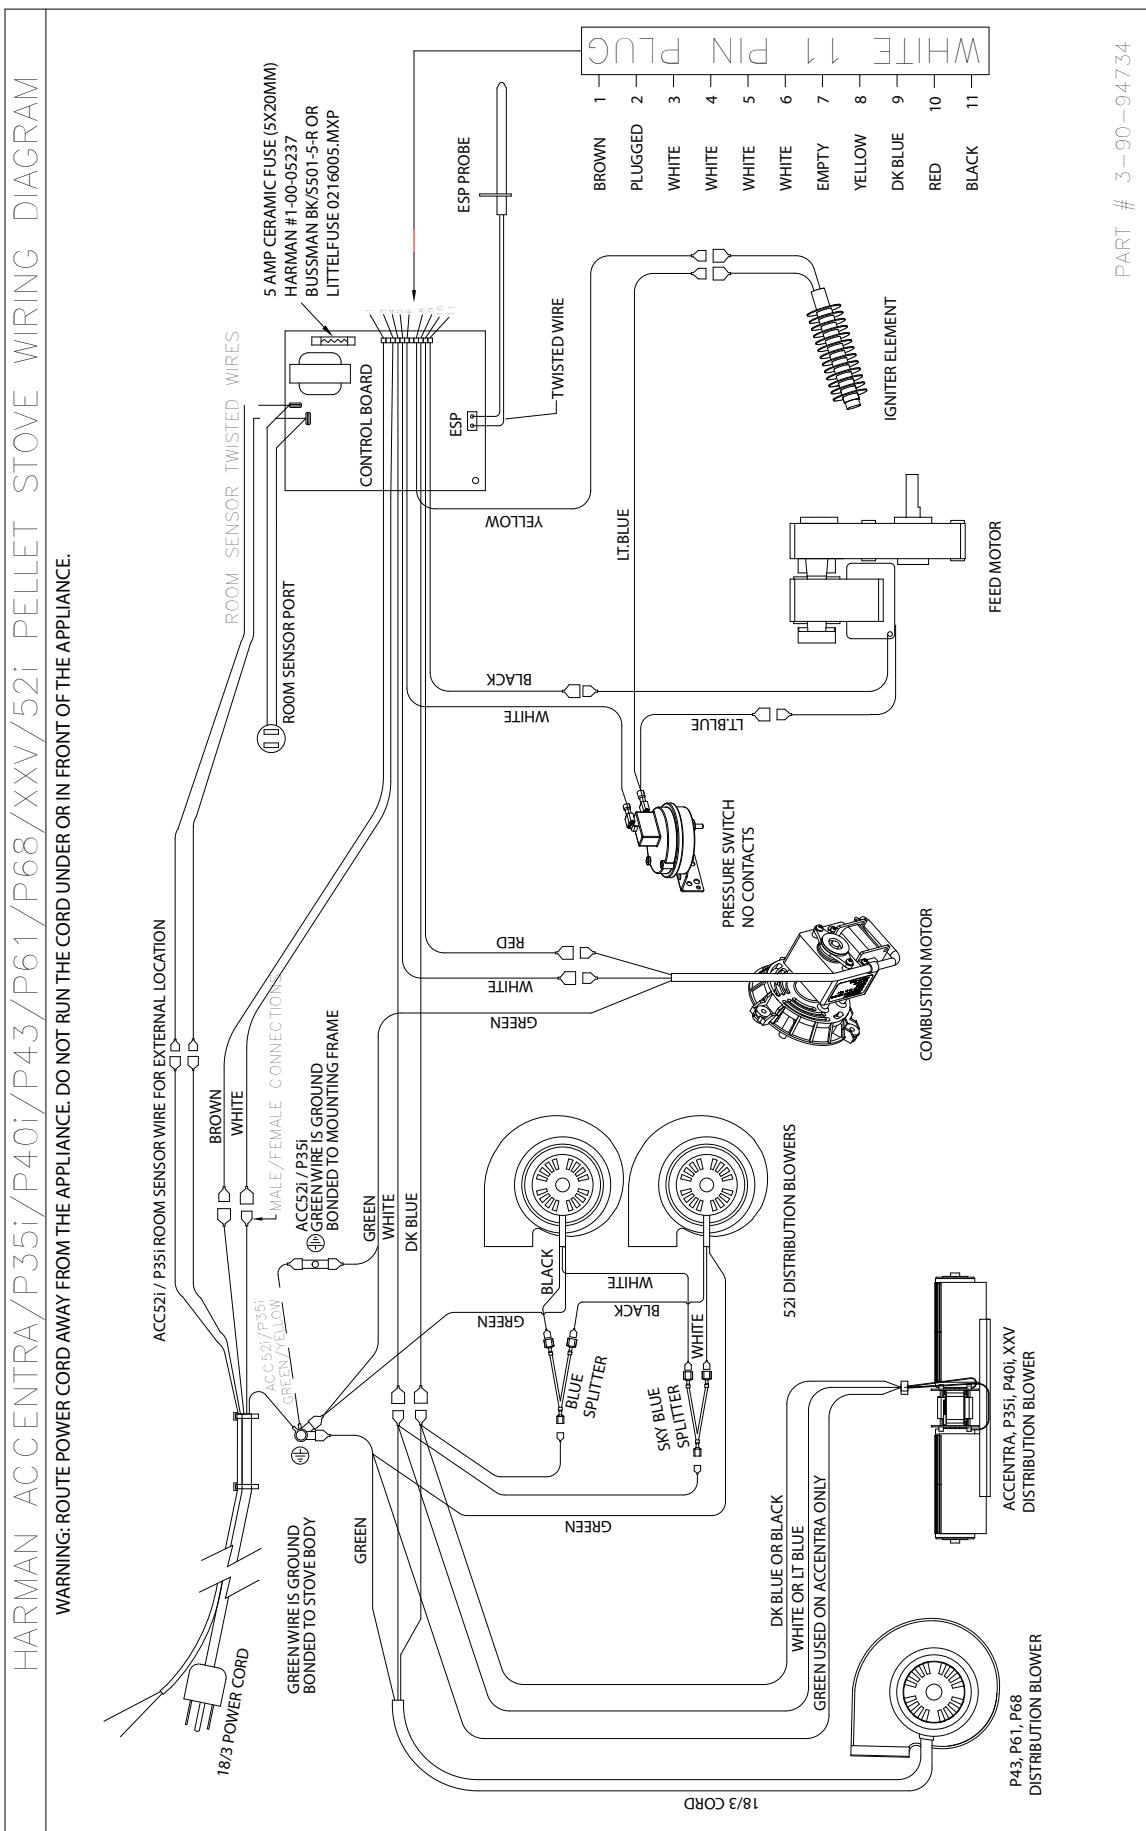

### **WARNING**

**USE OF IMPROPER FUELS, FIRESTARTERS OR ALTERING THE STOVE FOR HIGHER HEAT OUTPUT MAY CAUSE DAMAGE TO THE STOVE AND COULD RESULT IN A HOUSE FIRE. USE ONLY APPROVED FUELS AND OPERATION GUIDELINES**

### **WARNING**

**BURNING COLORED PAPER, CARDBOARD, SOLVENTS, TRASH AND GARBAGE OR ALTERING THE STOVE FOR HIGHER HEAT OUTPUT MAY CAUSE DAMAGE TO THE STOVE AND COULD RESULT IN A HOUSE FIRE. USE ONLY APPROVED FUELS AND FOLLOW ONLY THESE OPERATION GUIDELINES.**

### NOTICE

#### DO NOT DISCARD THIS MANUAL

- Important operating and maintenance instructions included.

- Read, understand and follow these instructions for safe installation and operation.

- Leave this manual with party responsible for use and operation.

## **7. Appendixes**

### **Appendix A. Invalid Run 1 Test Data**

(Test results not included in final results)

## **P43-C. Operating instructions.**

**High Burn:** Auto/Manual switch to Auto.

115v set for all burn rates.

Feed 52.5s (5.00+- .02 on screen d)

Temperature Dial Full clockwise.

### **Medium Burn:**

Only adjust Feed to 22.5s

### **Low Burn:**

Mode Dial to lowest spot on green section. Or the "C" in Constant.

Feed 20.0s

Temperature Dial Low Full counterclockwise.

**P43-C Conditioning Data (Data collected during medium burn rate)**

**Pellet Heater Lab Data - ASTM E2779 / ASTM E2515**

Manufacturer: Hearth & Home Technology Equipment Numbers: \_\_\_\_\_  
 Model: P43-C  
 Tracking No.: 2470  
 Project No.: 0135PS023E  
 Run #: 1 Technician Signature: \_\_\_\_\_  
 Date: 8/7/23

**FIRST HOUR EMISSIONS**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter	F37	117.4	119.6	2.2
B. Rear filter catch	Filter	F38	116.4	116.4	0.0
C. Probe catch*	Probe	68	116878.8	116878.8	0.0
D. Filter seals catch*	Seals	S556	3389.5	3389.6	0.1
			1 <sup>st</sup> hour Sub-Total, mg:		2.3

**TRAIN 1**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0
			Sub-Total, mg:		0.0
			Train 1 Aggregate, mg:		2.3

**TRAIN 2**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0
			Train 2 Aggregate, mg:		0.0

**AMBIENT**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch*	Filter				0.0
			Ambient Aggregate, mg:		0.0

\*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be included in O-ring seal weights.

			%O 42.84		
			%Ash 0.56		

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

**Manufacturer:** Hearth & Home Technologies  
**Model:** P43-C  
**Date:** 8/7/2023  
**Run:** 1  
**Control #:** 2470

**Test Duration:** 180**Output Category:** Low**Appliance Type:** Pellet (Cat, Non-Cat, Pellet)

	Temp. Units	F	(F or C)	Default Fuel Values	
	Weight Units	lb	(kg or lb)	D. Fir	Oak
HHV (kJ/kg)				19,810	19,887
%C				48.73	50
%H				6.87	6.6
%O				43.9	42.9
%Ash				0.5	0.5

**Fuel Data**

Wood Moisture (% wet):	4.23	HHV	19,755	kJ/kg
Load Weight (lb wet):	6.90	%C	50	
Burn Rate (dry kg/h):	1.00	%H	6.6	
Total Particulate Emissions:	0 g	%O	42.84	
		%Ash	0.56	

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Elapsed Time (min)	Fuel Weight Remaining (lb)	Flue Gas Composition (%)			Flue Gas Temp	Room Temp
		CO	CO <sub>2</sub>	O <sub>2</sub>

## Pellet Heater Test Data - ASTM E2779 / ASTM E2515

Run: 2  
 Manufacturer: HHT  
 Model: P43-C  
 Tracking No.: 2470  
 Project No.: 0135PS023E.REV002  
 Test Date: 28-Aug-23  
 Beginning Clock Time: 12:14

High Burn End Time: 60  
 Medium Burn End Time: 180  
 Total Sampling Time: 360 min  
 Recording Interval: 1 min

Background Sample Volume: 77.803 cubic feet

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)  
 Barometric Pressure: Begin Middle End Average  
 30.13 30.09 30.11 "Hg

PM Control Modules: 335,336  
 Dilution Tunnel MW(dry): 29.00 lb/lb-mole  
 Dilution Tunnel MW(wet): 28.78 lb/lb-mole  
 Dilution Tunnel H2O: 2.00 percent  
 Dilution Tunnel Static: -0.380 "H<sub>2</sub>O  
 Tunnel Area: 0.1963 ft<sup>2</sup>  
 Pitot Tube Cp: 0.99

Avg. Tunnel Velocity: 18.88 ft/sec.  
 Initial Tunnel Flow: 205.1 scfm  
 Average Tunnel Flow: 206.6 scfm  
 Post-Test Leak Check (1): 0.002 cfm @ 10 in. Hg  
 Post-Test Leak Check (2): 0.000 cfm @ 7 in. Hg  
 Fuel Moisture (%): 4.417 Dry Basis 4.230 Wet Basis

## Pellet Heater Test Data - ASTM E2779 / ASTM E2515

Run: 2  
 Manufacturer: HHT  
 Model: P43-C  
 Tracking No.: 2470  
 Project No.: 0135PS023E.REV002  
 Test Date: 28-Aug-23  
 Beginning Clock Time: 12:14

High Burn End Time: 60  
 Medium Burn End Time: 180  
 Total Sampling Time: 360 min  
 Recording Interval: 1 min

Background Sample Volume: 77.803 cubic feet

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)  
 Barometric Pressure: Begin Middle End Average  
 30.13 30.09 30.11 "Hg

PM Control Modules: 335,336  
 Dilution Tunnel MW(dry): 29.00 lb/lb-mole  
 Dilution Tunnel MW(wet): 28.78 lb/lb-mole  
 Dilution Tunnel H2O: 2.00 percent  
 Dilution Tunnel Static: -0.380 "H<sub>2</sub>O  
 Tunnel Area: 0.1963 ft<sup>2</sup>  
 Pitot Tube Cp: 0.99

Avg. Tunnel Velocity: 18.88 ft/sec.  
 Initial Tunnel Flow: 205.1 scfm  
 Average Tunnel Flow: 206.6 scfm  
 Post-Test Leak Check (1): 0.002 cfm @ 10 in. Hg  
 Post-Test Leak Check (2): 0.000 cfm @ 7 in. Hg  
 Fuel Moisture (%): 4.417 Dry Basis 4.230 Wet Basis

## Pellet Heater Test Data - ASTM E2779 / ASTM E2515

Run: 2  
 Manufacturer: HHT  
 Model: P43-C  
 Tracking No.: 2470  
 Project No.: 0135PS023E.REV002  
 Test Date: 28-Aug-23  
 Beginning Clock Time: 12:14

High Burn End Time: 60  
 Medium Burn End Time: 180  
 Total Sampling Time: 360 min  
 Recording Interval: 1 min

Background Sample Volume: 77.803 cubic feet

Meter Box Y Factor: 1.007 (1) 1.015 (2) 1.012 (Amb)  
 Barometric Pressure: Begin Middle End Average  
 30.13 30.09 30.11 "Hg

PM Control Modules: 335,336  
 Dilution Tunnel MW(dry): 29.00 lb/lb-mole  
 Dilution Tunnel MW(wet): 28.78 lb/lb-mole  
 Dilution Tunnel H2O: 2.00 percent  
 Dilution Tunnel Static: -0.380 "H<sub>2</sub>O  
 Tunnel Area: 0.1963 ft<sup>2</sup>  
 Pitot Tube Cp: 0.99

Avg. Tunnel Velocity: 18.88 ft/sec.  
 Initial Tunnel Flow: 205.1 scfm  
 Average Tunnel Flow: 206.6 scfm  
 Post-Test Leak Check (1): 0.002 cfm @ 10 in. Hg  
 Post-Test Leak Check (2): 0.000 cfm @ 7 in. Hg  
 Fuel Moisture (%): 4.417 Dry Basis 4.230 Wet Basis

Manufacturer:	HHT	Equipment Numbers:			
Model:	P43-C				
Tracking No.:	2470				
Project No.:	0135PS023E.REV002				
Run #:	0	Technician Signature:			
Date:	8/28/23				

**TRAIN 1 (First Hour emissions)**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0
1 <sup>st</sup> hour Sub-Total, mg:			0.0		

**TRAIN 1 (Remainder of Test)**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter	F53	124.6	130.5	5.9
B. Rear filter catch	Filter	F54	122.2	122.2	0.0
C. Probe catch*	Probe	12	114284.9	114285.0	0.1
D. Filter seals catch*	Seals	S542	3312.5	3312.5	0.0
Remainder Sub-Total, mg:			6.0		
Train 1 Aggregate, mg:			6.0		

**TRAIN 2**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter	F55	122.3	128.0	5.7
B. Rear filter catch	Filter	F56	124.7	124.8	0.1
C. Probe catch*	Probe	66.0	118455.6	118455.8	0.2
D. Filter seals catch*	Seals	S543	3385.2	3385.3	0.1
Train 2 Aggregate, mg:			6.1		

**AMBIENT**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch*	Filter	F57	124.8	124.8	0.0
Ambient Aggregate, mg:			0.0		

\*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be included in O-ring seal weights.

 Date: 8/28/23

**TRAIN 1 (First Hour emissions)**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter	F51	123.4	125.5	2.1
B. Rear filter catch	Filter	F52	124.5	124.6	0.1
C. Probe catch*	Probe	33.0	113944.0	113943.9	0.0
D. Filter seals catch*	Seals	S541	3399.9	3399.9	0.0
			1 <sup>st</sup> hour Sub-Total, mg:		2.2

**TRAIN 1 (Remainder of Test)**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0
			Remainder Sub-Total, mg:		0.0
			Train 1 Aggregate, mg:		0.0

**TRAIN 2**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch	Filter				0.0
B. Rear filter catch	Filter				0.0
C. Probe catch*	Probe				0.0
D. Filter seals catch*	Seals				0.0
			Train 2 Aggregate, mg:		0.0

**AMBIENT**

Sample Component	Reagent	Filter, Probe or Seal #	Mass Readings		
			Tare, mg	Final, mg	Particulate, mg
A. Front filter catch*	Filter				0.0
			Ambient Aggregate, mg:		0.0

\*Particulate catch that results in a negative number, is assumed to be zero for probes and seals, negative numbers for filters are assumed to be included in O-ring seal weights.

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

**Manufacturer:** Hearth & Home Technologies  
**Model:** P43-C  
**Date:** 8/28/2023  
**Run:** 2  
**Control #:** 2470

**Test Duration:** 60**Output Category:** High**Appliance Type:** Pellet (Cat, Non-Cat, Pellet)

Temp. Units	F	(F or C)	Default Fuel Values	
Weight Units	lb	(kg or lb)	D. Fir	Oak
			HHV (kJ/kg)	19,810 19,887
			%C	48.73 50
			%H	6.87 6.6
			%O	43.9 42.9
			%Ash	0.5 0.5

**Fuel Data**

Wood Moisture (% wet):	4.23	HHV	19,755	kJ/kg
Load Weight (lb wet):	6.40	%C	50	
Burn Rate (dry kg/h):	2.78	%H	6.6	
Total Particulate Emissions:	2.05 g	%O	42.84	
		%Ash	0.56	

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

VERSION: 2.4

4/15/2010

**Manufacturer:** Hearth & Home Technologies  
**Model:** P43-C  
**Date:** 8/28/2023  
**Run:** 2  
**Control #:** 2470

**Test Duration:** 180**Output Category:** Low**Appliance Type:** Pellet (Cat, Non-Cat, Pellet)

	Temp. Units	F	(F or C)	Default Fuel Values	
	Weight Units	lb	(kg or lb)	D. Fir	Oak
HHV (kJ/kg)				19,810	19,887
%C				48.73	50
%H				6.87	6.6
%O				43.9	42.9
%Ash				0.5	0.5

**Fuel Data**

Wood Moisture (% wet):	4.23	HHV	19,755	kJ/kg
Load Weight (lb wet):	7.30	%C	50	
Burn Rate (dry kg/h):	1.06	%H	6.6	
Total Particulate Emissions:	0 g	%O	42.84	
		%Ash	0.56	

Note 1: For other fuels, use the heating value and fuel composition determined by analysis of fuel sample in accordance with Clause 9.2.

Note 2: In cases where the "Fuel Weight Remaining" is the same for three or more readings in a row, a "divide by zero error" will occur in the calculation sheet. In such cases, adjust the weight values by interpolation between the first occurrence and the next reading showing a decrease in weight.

Elapsed Time (min)	Fuel Weight Remaining (lb)	Flue Gas Composition (%)			Temp. (°F)	
		CO	CO <sub>2</sub>	O <sub>2</sub>	Flue Gas	Room Temp

## **Appendix C. Memorandum**

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY  
RESEARCH TRIANGLE PARK, NC 27711

MEMORANDUM

02/02/2022

OFFICE OF  
AIR QUALITY PLANNING  
AND STANDARDS

**SUBJECT:** Appropriate calculation of Medium Burn Rate Category in ASTM E-2779 Testing

**FROM:** Steffan Johnson  
Group Leader  
Measurement Technology Group  
Air Quality Assessment Division

STEFFAN  
JOHNSON

Digitally signed by

**TO:** Robert Scinta, P.E.  
Chief, Air Branch  
Monitoring, Assistance, and Media Programs Division  
Office of Compliance, Office of Enforcement and Compliance Assurance

During a recent review of pellet heater compliance test reports, the Measurement Technology Group has uncovered an error in determining the appropriate Medium Burn Rate Category when using ASTM E-2779 for compliance pursuant to 40 CFR 60, subpart AAA. Specifically, the method requirements in section 9.4.1.2 and Table 1 of that test method incorrectly require that the Medium Burn Rate Category must fall below 50% of the maximum burn rate. This is not correct as this requirement assumes then that zero is the other bound for determining half of the maximum.

9.4.1.2 *Medium Burn Rate Category*—For burn rates in the medium segment, except as allowed in 9.4.1.4 or 9.4.1.5, the pellet heater shall be operated with the control or controls set in the position(s) as needed to achieve a burn rate that is  $\leq 50\%$  of the maximum burn rate.

TABLE 1

Burn Rate Segment	Maximum	Medium	Minimum
Description	Maximum achievable	$\leq 50\%$ of Maximum	Minimum achievable
Time at Burn Rate	60 +5 / - 0 minutes	120 +5 / - 0 minutes	180 +5 / - 0 minutes
