**WARNING:** If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury, or death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

**What to do if you smell gas**
- Do not try to light any appliance.
- Do not touch any electrical switch. Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

**CAUTION**

This appliance may be installed as an OEM installation in manufactured home (USA only) or mobile home and must be installed in accordance with the manufacturer’s instructions and the manufactured home construction and safety standard, Title 24 CFR, Part 3280 or Standard for Installation in Mobile Homes, CAN/CSA Z240MH.

This appliance is only for use with the type(s) of gas indicated on the rating plate.

In the Commonwealth of Massachusetts:
- installation must be performed by a licensed plumber or gas fitter;
- See Table of Contents for location of additional Commonwealth of Massachusetts requirements.

Installation and service of this appliance should be performed by qualified personnel. Hearth & Home Technologies suggests NFI certified or factory trained professionals, or technicians supervised by an NFI certified professional.

**WARNING**

HOT SURFACES!
Glass and other surfaces are hot during operation AND cool down.

Hot glass will cause burns.
- DO NOT touch glass until it is cooled
- NEVER allow children to touch glass
- Keep children away

- CAREFULLY SUPERVISE children in same room as fireplace.
- Alert children and adults to hazards of high temperatures.

High temperatures may ignite clothing or other flammable materials.
- Keep clothing, furniture, draperies and other flammable materials away.

This appliance has been supplied with an integral barrier to prevent direct contact with the fixed glass panel. **DO NOT operate the appliance with the barrier removed.**

Contact your dealer or Hearth & Home Technologies if the barrier is not present or help is needed to properly install one.
Congratulations on selecting a Heat & Glo gas appliance—an elegant and clean alternative to wood burning appliances. The Heat & Glo gas appliance you have selected is designed to provide the utmost in safety, reliability, and efficiency.

As the owner of a new appliance, you’ll want to read and carefully follow all of the instructions contained in this Owner’s Manual. Pay special attention to all Cautions and Warnings.

This Owner’s Manual should be retained for future reference. We suggest that you keep it with your other important documents and product manuals.

The information contained in this Owner’s Manual, unless noted otherwise, applies to all models and gas control systems.

Your new Heat & Glo gas appliance will give you years of durable use and trouble-free enjoyment. Welcome to the Heat & Glo family of appliance products!

### Homeowner Reference Information

| Model Name: _______________________________ | Date purchased/installed: __________________ |
| Serial Number: ____________________________ | Location on appliance: ______________________ |
| Dealership purchased from: __________________ | Dealer Phone: _______________________________ |
| Notes: ___________________________________________________________________________________ | |

We recommend that you record the following pertinent information about your appliance.

### Listing Label Information/Location

The model information regarding your specific appliance can be found on the rating plate usually located in the control area of the appliance.

#### Type of Gas

Heat & Glo, a brand of Hearth & Home Technologies, Inc. 7571 215th Street West, Lakeville, MN 55044

Not for use with solid fuel.

(Ne doit pas être utilisé avec du combustible solide).

Type of Gas (Sorte De Gaz): This appliance must be installed in accordance with local codes, if any. If not, follow ANSI Z223.1 in the USA or CAN/CGA B149 installation codes. (Installer l'appareil selon les codes ou réglementations locaux ou en l'absence de telles réglementations, selon les codes d'installation CAN/CGA-B149.)

**1 Listing and Code Approvals**

**A. Appliance Certification**

**MODEL:** Soulstice  
**LABORATORY:** Underwriters Laboratories, Inc. (UL)  
**TYPE:** Direct Vent Gas Fireplace Heater  
**STANDARD:** ANSI Z21.88-2002 • CSA2.33-M02 • UL307B

This product is listed to ANSI standards for “Vented Gas Appliance Heaters” and applicable sections of “Gas Burning Heating Appliances for Manufactured Homes and Recreational Vehicles”, and “Gas Fired Appliances for Use at High Altitudes”.

**NOT INTENDED FOR USE AS A PRIMARY HEAT SOURCE.**

This appliance is tested and approved as either supplemental room heat or as a decorative appliance. It should not be factored as primary heat in residential heating calculations.

**B. Glass Specifications**

Hearth & Home Technologies appliances manufactured with tempered glass may be installed in hazardous locations such as bathtub enclosures as defined by the Consumer Product Safety Commission (CPSC). The tempered glass has been tested and certified to the requirements of ANSI Z97.1 and CPSC 16 CFR 1202 (Safety Glazing Certification Council SGCC# 1595 and 1597. Architectural Testing, Inc. Reports 02-31919.01 and 02-31917.01).

This statement is in compliance with CPSC 16 CFR Section 1201.5 “Certification and labeling requirements” which refers to 15 U.S. Code (USC) 2063 stating “...Such certificate shall accompany the product or shall otherwise be furnished to any distributor or retailer to whom the product is delivered.”

Some local building codes require the use of tempered glass with permanent marking in such locations. Glass meeting this requirement is available from the factory. Please contact your dealer or distributor to order.

**Note:** This installation must conform with local codes. In the absence of local codes you must comply with the National Fuel Gas Code, ANSI Z223.1-latest edition in the U.S.A. and the CAN/CGA B149 Installation Codes in Canada.

**C. BTU Specifications**

**D. High Altitude Installations**

U.L. Listed gas appliances are tested and approved without requiring changes for elevations from 0 to 2000 feet in the U.S.A. and Canada.

When installing this appliance at an elevation above 2000 feet, it may be necessary to decrease the input rating by changing the existing burner orifice to a smaller size. Input rate should be reduced by 4% for each 1000 feet above a 2000 foot elevation in the U.S.A., or 10% for elevations between 2000 and 4500 feet in Canada. If the heating value of the gas has been reduced, these rules do not apply. To identify the proper orifice size, check with the local gas utility.

If installing this appliance at an elevation above 4500 feet (in Canada), check with local authorities.

![WARNING]

Do NOT use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

**E. Non-Combustible Materials Specification**

Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.

Materials that are reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750ºC, shall be considered non-combustible materials.

**F. Combustible Materials Specification**

Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or whether plastered or unplastered shall be considered combustible materials.

**G. Electrical Codes**

**NOTICE:** This appliance must be electrically wired and grounded in accordance with local codes or, in the absence of local codes, with National Electric Code ANSI/NFPA 70-latest edition or the Canadian Electric Code CSA C22.1.

- A 110-120 VAC circuit for this product must be protected with ground-fault circuit-interrupter protection, in compliance with the applicable electrical codes, when it is installed in locations such as in bathrooms or near sinks.
H. Requirements for the Commonwealth of Massachusetts

For all side wall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than seven (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

Installation of Carbon Monoxide Detectors

At the time of installation of the side wall horizontal vented gas fueled equipment, the installing plumber or gas fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas fitter shall observe that a battery operated or hard wired carbon monoxide detector with an alarm is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or an attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level. In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

Approved Carbon Monoxide Detectors

Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

Signage

A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum height of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print size no less than one-half (1/2) inch in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL ob- stru ctions”.

Inspection

The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08(2)(a)1 through 4.

Exemptions

The following equipment is exempt from 248 CMR 5.08(2)(a)1 through 4:

- The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and
- Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

MANUFACTURER REQUIREMENTS

Gas Equipment Venting System Provided

When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

- Detailed instructions for the installation of the venting system design or the venting system components; and
- A complete parts list for the venting system design or venting system.

Gas Equipment Venting System NOT Provided

When the manufacturer of a Product Approved side wall horizontally vented gas fueled equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

- The referenced “special venting system” instructions shall be included with the appliance or equipment installation instructions; and
- The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

See Gas Connection section for additional Commonwealth of Massachusetts requirements.
When planning an appliance installation, it’s necessary to determine the following information before installing:

• Where the appliance is to be installed. **See Sections 3 and 4.**
• The vent system configuration to be used. **See Sections 5 and 6.**
• Gas supply piping. **See Section 9.**
• Electrical wiring. **See Section 10.**
• Framing and finishing details. **See Sections 3, 6 and 11.**
• Whether optional accessories—devices such as a fan, wall switch, or remote control—are desired. **See Sections 7B and 10.**

When planning an appliance installation, it’s necessary to determine the following information before installing:

1. Where the appliance is to be installed. **See Sections 3 and 4.**
2. The vent system configuration to be used. **See Sections 5 and 6.**
3. Gas supply piping. **See Section 9.**
4. Electrical wiring. **See Section 10.**
5. Framing and finishing details. **See Sections 3, 6 and 11.**
6. Whether optional accessories—devices such as a fan, wall switch, or remote control—are desired. **See Sections 7B and 10.**

### A. Design and Installation Considerations

Heat & Glo direct vent gas appliances are designed to operate with all combustion air siphoned from outside of the building and all exhaust gases expelled to the outside. No additional outside air source is required.

### C. Inspect Appliance and Components

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inspect appliance and components for damage. Damaged parts may impair safe operation.</td>
</tr>
<tr>
<td>• Do NOT install damaged components.</td>
</tr>
<tr>
<td>• Do NOT install incomplete components.</td>
</tr>
<tr>
<td>• Do NOT install substitute components. Report damaged parts to dealer.</td>
</tr>
</tbody>
</table>

- Carefully remove the appliance and components from the packaging.
- The vent system components and trim doors are shipped in separate packages.
- The gas logs may be packaged separately and must be field installed.
- Report to your dealer any parts damaged in shipment, particularly the condition of the glass.
- **Read all of the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.**

### B. Tools and Supplies Needed

Before beginning the installation be sure that the following tools and building supplies are available.

<table>
<thead>
<tr>
<th>Tool/Supply</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reciprocating saw</td>
</tr>
<tr>

<tr>
<td>One 1/4 inch female connection (for optional fan).</td>
</tr>
</tbody>
</table>
D. Inspect Firebox

Surface cracking or crazing of firebrick material is normal and expected. The following types of cracks are acceptable and do not require replacement of the unit or the firebox:

- Cracks that do not propagate entirely through the material.
- Light fracture lines or "spider-webbing" on the surface of the material.
- Cracks that are less than 1/32 in. wide and less than 3 in. long.
- If cosmetically unacceptable, such cracks may be repaired with the SRV-PACK service kit. See Service Parts List.

Cracks that are unacceptable:

- Cracks greater than 1/32 in. wide and 3 in. long are at risk of growing.
- Cracks that penetrate entirely through the firebrick material.

Inspection for cracking should be run when the appliance is cool. Cracks tend to close as the appliance heats up.
3 Framing and Clearances

Note:
- Illustrations reflect typical installations and are FOR DESIGN PURPOSES ONLY.
- Illustrations/diagrams are not drawn to scale.
- Actual installation may vary due to individual design preference.

A. Selecting Appliance Location
When selecting a location for your appliance it is important to consider the required clearances to walls (see figure 3.1).

Table: Appliance Locations

<table>
<thead>
<tr>
<th></th>
<th>A</th>
<th>B</th>
<th>C</th>
<th>D</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inch</td>
<td>41-1/2</td>
<td>37</td>
<td>58-5/8</td>
<td>16-1/4</td>
</tr>
<tr>
<td>Mill</td>
<td>1054</td>
<td>940</td>
<td>1489</td>
<td>414</td>
</tr>
</tbody>
</table>

In addition to these framing dimensions, also reference the following sections:
- Clearances and Mantel Projections (Sections 3.C and 3.D)
- Vent Clearances and Framing (Section 6).

WARNING

Fire Risk
Provide adequate clearance:
- Around air openings
- To combustibles
- For service access
Locate appliance away from traffic areas.

NOTE: For actual appliance dimensions refer to Section 16.
B. Constructing the Appliance Chase

A chase is a vertical boxlike structure built to enclose the gas appliance and/or its vent system. Vertical vents that run on the outside of a building may be, but are not required to be, installed inside a chase.

Construction of the chase may vary with the type of building. These instructions are not substitutes for the requirements of local building codes. Local building codes MUST be checked.

Chases should be constructed in the manner of all outside walls of the home to prevent cold air drafting problems. The chase should not break the outside building envelope in any manner.

Walls, ceiling, base plate and cantilever floor of the chase should be insulated. Vapor and air infiltration barriers should be installed in the chase as per regional codes for the rest of the home. Additionally, in regions where cold air infiltration may be an issue, the inside surfaces may be sheetrocked and taped for maximum air tightness.

To further prevent drafts, the wall shield and ceiling fire-stops should be caulked with high temperature caulk to seal gaps. Gas line holes and other openings should be caulked with high temp caulk or stuffed with unfaced insulation. If the appliance is being installed on a cement slab, a layer of plywood may be placed underneath to prevent conducting cold up into the room.

C. Clearances

![Warning]

Fire Risk.
Odor Risk.

- Install appliance on hard metal or wood surfaces extending full width and depth of appliance.
- Do NOT install appliance directly on carpeting, vinyl, tile or any combustible material other than wood.

![Warning]

Fire Risk.

- Construct chase to all clearance specifications in manual.
- Locate and install appliance to all clearance specifications in manual.

4 Termination Locations

A. Vent Termination Minimum Clearances

**WARNING**

Fire Risk.
Explosion Risk.
Inspect external vent cap regularly.
• Ensure no debris blocks cap.
• Combustible materials blocking cap may ignite.
• Restricted air flow affects burner operation.

**WARNING**

Fire Risk.
Explosion Risk.
Maintain vent clearance to combustibles as specified.
• Do not pack air space with insulation or other materials.
Failure to keep insulation or other materials away from vent pipe may cause fire.

Measure vertical clearances from this surface.

Measure horizontal clearances from this surface.

(See Figure 4.4 for specific clearances)

Figure 4.1

** a vent shall not terminate directly above a sidewalk or paved driveway which is located between two single family dwellings and serves both dwellings.

*** only permitted if veranda, porch, deck or balcony is fully open on a minimum of 2 sides beneath the floor, or meets Note 2.

NOTE 1: On private property where termination is less than 7 feet above a sidewalk, driveway, deck, porch, veranda, or balcony, use of a listed cap shield is suggested. (See vents components page)

NOTE 2: Termination in an alcove space (spaces open only on one side and with an overhang) are permitted with the dimensions specified for vinyl or non-vinyl siding and soffits. 1. There must be 3 feet minimum between termination caps. 2. All mechanical air intakes within 10 feet of a termination cap must be a minimum of 3 feet below the termination cap. 3. All gravity air intakes within 3 feet of a termination cap must be a minimum of 1 foot below the termination cap.

NOTE 3: Local codes or regulations may require different clearances.

NOTE 4: Termination caps may be hot. Consider their proximity to doors or other traffic areas.

NOTE 5: Location of the vent termination must not interfere with access to the electrical service.

WARNING: In the U.S: Vent system termination is NOT permitted in screened porches. You must follow side wall, overhang and ground clearances as stated in the instructions.

In Canada: Vent system termination is NOT permitted in screened porches. Vent system termination is permitted in porch areas with two or more sides open. You must follow all side walls, overhang and ground clearances as stated in the instructions.

Heat & Glo assumes no responsibility for the improper performance of the appliance when the venting system does not meet these requirements.

CAUTION: IF EXTERIOR WALLS ARE FINISHED WITH VINYL SIDING, IT IS SUGGESTED THAT A VINYL PROTECTOR KIT BE INSTALLED.
A. Vent Table Key
The abbreviations listed in this vent table key are used in the vent diagrams.

<table>
<thead>
<tr>

<td>H₁</td>
<td>First section (closest to appliance) of horizontal length</td>
</tr>
<tr>
<td>H₂</td>
<td>Second section of horizontal length</td>
</tr>
</tbody>
</table>

**WARNING**

Fire Hazard.
Explosion Risk.
Asphyxiation Risk.
Do NOT connect this gas appliance to a chimney flue serving a separate solid-fuel or gas burning appliance.
• Vent this appliance directly outside.
• Use separate vent system for this appliance.
May impair safe operation of this appliance or other appliances connected to the flue.

B. Use of Elbows

**CAUTION**

ALL vent configuration specifications MUST be followed.
• This product is tested and listed to these specifications.
• Appliance performance will suffer if specifications are not followed.

Diagonal runs have both vertical and horizontal vent aspects when calculating the effects. Use the rise for the vertical aspect and the run for the horizontal aspect (see Figure 5.1).

Two 45° elbows may be used in place of one 90° elbow. On 45° runs, one foot of diagonal is equal to 8-1/2 (216 mm) inches horizontal run and 8-1/2 (216 mm) inches vertical run. A length of straight pipe is allowed between two 45° elbows (see Figure 5.1).

C. Measuring Standards
Vertical and horizontal measurements listed in the vent diagrams were made using the following standards.

1. Pipe measurements are shown using the effective length of pipe (see Figure 5.2).
2. Measurements are made from the appliance outer wrap, not from the standoffs.
3. Horizontal terminations are measured to the outside mounting surface (flange of termination cap) (see Figure 4.1).
4. Vertical terminations are measured to bottom of termination cap.
5. Horizontal pipe installed level with no rise.

2. Top Vent - Vertical Termination

No Elbow

V₁ = 45 ft Max. (13.7m)

Note: For vertical venting of 8 feet or higher, the restrictor plate should be used. The restrictor plate is shipped in the bottom of the appliance on the right side. To install remove two of the 3/8 inch nuts from the top, inside of firebox. Place the restrictor plate over the bolts and replace the two nuts. Make sure the nuts are tightened securely.

![Diagram of Three Elbows](Figure 5.8)
A. Pipe Clearances to Combustibles

**WARNING**

Fire Risk.
Explosion Risk.
Maintain vent clearance to combustibles as specified.
- Do not pack air space with insulation or other materials.
Failure to keep insulation or other materials away from vent pipe may cause fire.

**NOTE:** Slope not required.

![Figure 6.1 Pipe Clearances](image)

**NOTE:** Heat shields MUST overlap by a minimum of 1-1/2 in. (38 mm). The heat shield is designed to be used on a wall 4 in. to 7-1/4 in. (102 mm to 184 mm) thick. If wall thickness is less than 4 in. (102 mm) the existing heat shields must be field trimmed. If wall thickness is greater than 7-1/4 in. (184 mm) a DVP-HSM-B will be required.

![Figure 6.2 Horizontal venting clearances to combustible materials](image)

**Combustible Wall Penetration**

Frame a hole in a combustible wall for an interior wall shield firestop, (Figure 6.3) whenever a wall is penetrated. Use same size framing materials as those used in the wall construction. The wall shield firestop maintains minimum clearances and prevents cold air infiltration.

**Non-Combustible Wall Penetration**

If the hole being penetrated is surrounded by noncombustible materials such as concrete, a hole with diameter one inch greater than the pipe is acceptable.

Whenever a non-combustible wall is penetrated, the wall shield firestop is only required on one side and no heat shield is necessary.

If your local inspector requires the wall shield firestop on both sides, then both wall shield firestops must have a heat shield attached to them.

![Figure 6.3 Exterior Wall Hole](image)
C. Vertical Penetration Framing

![WARNING]
Fire Hazard
Keep loose materials or blown insulation from touching the vent pipe.
- National building codes recommend using attic shield to keep loose materials/blown insulation from contacting vent.
- Hearth & Home Technologies requires the use of an attic shield.

Installing the Ceiling Firestop

- Frame an opening 10 inches by 10 inches whenever the vent system penetrates a ceiling/floor (see Figure 6.4).
- Frame the area with the same sized lumber as used in ceiling/floor joist.
- When installing a top vent vertical termination appliance the hole should be directly above the appliance, unless the flue is offset.
- Do not pack insulation around the vent. Insulation must be kept away from the pipe.

Installing Attic Shield

**Note:** An additional ceiling firestop is not required if attic shield is used.

- Frame opening for attic shield.
- Attic shield may be installed above or below ceiling (see Figure 6.5).
- Secure with three fasteners on each side.
- Fold tabs at top of attic shield in toward vent pipe. Tabs must keep vent pipe centered within shield.
- Field construct additional shield height if insulation is deeper than height of attic shield.
7 Appliance Preparation

A. Removing Non-combustible Facing Material Assembly

The non-combustible assembly is located on the back side of appliance.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Handle with care.</td>
</tr>
<tr>
<td>• Non-combustible material may be damaged if dropped.</td>
</tr>
</tbody>
</table>

- Hold non-combustible pieces in place.
- Remove and save two screws from upper bracket.
- Remove non-combustible pieces.
- Remove and save three screws from lower bracket.
- Discard brackets.
- Replace screws in holes where brackets were attached to appliance.

B. Installing the Optional Heat Zone Gas Kit

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire Risk.</td>
</tr>
<tr>
<td>• Prevent contact with sagging, loose insulation.</td>
</tr>
<tr>
<td>• Do NOT install against combustible materials such as exposed insulation, plastic and insulation backer.</td>
</tr>
</tbody>
</table>

- Remove the cover plate from the top of the appliance and discard it (see Figure 7.1).
- Center the duct collar around the exposed hole and attach it to the appliance with three screws. NOTE: Do this BEFORE final positioning of the appliance.
- Determine the location for the air register/fan housing assembly. For this appliance, the maximum duct run is 10 feet for useful heat output.
- Reference the Heat Zone Gas Kit instructions for the remaining installation steps.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire Risk.</td>
</tr>
<tr>
<td>• ALWAYS maintain specified clearances around the appliance.</td>
</tr>
<tr>
<td>• Do NOT notch into the framing around the appliance spacers. Failure to keep insulation, framing or other material away from the appliance may cause fire.</td>
</tr>
</tbody>
</table>

C. Securing and Leveling the Appliance

The diagram shows how to properly position, level, and secure the appliance (see Figure 7.2). Nailing tabs are provided to secure the appliance to the framing members.

- Decide on the face finish method and use the appropriate nailing tabs to secure the appliance. See Section 11 - Finishing.
- Place the appliance into position.
- Level the appliance from side to side and front to back.
- Shim the appliance as necessary. It is acceptable to use wood shims.
- Bend out nailing tabs on each side.
- Keep nailing tabs flush with the framing.
- Secure the appliance to the framing by using nails or screws through the nailing tabs.
D. Installing Non-combustible Facing Material

NOTICE: Do NOT install non-combustible facing material if using the Halo surround or the surround will not fit properly. Non-combustible facing material MUST be used in all other Soulstice installations.

WARNING

Fire Risk.
- Follow these instructions exactly.
- Facing materials must be installed properly to prevent fire.
- No materials may be substituted without authorization by Hearth & Home Technologies.

- Center and attach two top boards to the framing members. See Figure 7.3.
- Attach the left and right side pieces to framing members.
- Use fasteners from fastener packet (in manual bag) in shaded areas.
- Use regular sheetrock screws in non-shaded areas.
- Use a wet or dry towel or soft brush to remove dust or dirt from facing material.
- Apply a non-combustible adhesive to attach tile, stone or other non-combustible finishing materials per manufacturer’s instructions.
A. Assembly of Vent Sections

**WARNING**

Do not mix pipe, fittings or joining methods from different manufacturers.

**WARNING**

- Fire Risk
- Exhaust Fumes Risk
- Impaired Performance of Appliance
  - Overlap pipe slip sections at least 1-1/2 inches.
  - Use pilot holes for screws.
  - Screws must not exceed one inch long.
  - Pipe may separate if not properly joined.

Attaching Vent to the Firebox Assembly

To attach the first pipe section to the collars, slide the male end of the inner vent of the pipe section over the inner collar on the firebox assembly. At the same time, slide the outer flue over the outer collar on the appliance. Push the pipe section into the appliance collar until all the lances (see Figure 8.1) have snapped in place. Tug slightly on the section to confirm it has completely locked into place.

Commercial, Multi-family (Multi-level exceeding two stories), & High-Rise Applications

For Installation into Commercial, multi-family (multi-level exceeding two stories) or high-rise applications: All pipe joints must be sealed with high temperature silicone, including the slip section that connects directly to the horizontal termination cap.

- Apply a bead of silicone sealant inside the female outer pipe joint prior to joining sections. See Figure 8.1
- Only outer pipes are sealed. Do not seal the inner flue. All unit collar, pipe, slip section, elbow and cap outer flues shall be sealed in this manner, unless otherwise stated.

Note: The end of the pipe sections with the lances/tabs on it will face toward the appliance.

**WARNING**

- Fire Risk
- Explosion Risk
  If slip section seals are broken during the removal of the termination cap, gas will leak and a fire or explosion may occur.
  Do not break silicone seals on slip sections.

Make sure that the fiberglass rope ring supplied in the manual bag seals between the first vent component and the outer appliance wrap (see Figure 8.2)
Assembling Pipe Sections

Insert the inner flue of section A into the flared inner flue of section B.

Start the outer flue of section A over the outer flue of section B (see Figure 8.3). **Note:** The end of the pipe sections with the lances/tabs on it will face towards the appliance.

Once both inner and outer flues are started, press section A onto section B firmly until all lances have snapped into place. Check to make sure they have snapped together (see Figure 8.4) and the seams are not aligned (see Figure 8.5). Tug slightly on section A to confirm it has completely locked into place. It is acceptable to use screws no longer than 1 inch to hold outer pipe sections together. If predrilling holes, do NOT penetrate inner pipe.

For 90° and 45° elbows that are changing the vent direction from horizontal to vertical, one screw minimum should be put in the outer flue at the horizontal elbow joint to prevent the elbow from rotating. Use screws no longer than 1 inch. If predrilling screw holes do NOT penetrate inner pipe.

**Note:** Make sure that the seams are not aligned to prevent unintentional disconnection.

![Correct](CORRECT.png)

![Incorrect](INCORRECT.png)

Figure 8.5 Seams
Assembling Minimum Installations (MI) Sections

MI sections are non-unitized so that they can be cut to a certain length. Cut these sections to length from the non-expanded end (see Figure 8.6).

They can then be attached by first connecting the expanded end of the MI inner flue with the inner pipe from the adjacent pipe section and securing with three screws. The expanded portion of the MI inner flue must overlap completely with the unexpanded end of the adjacent pipe section.

The outer flue can then be inserted into the adjacent outer flue expanded end and attached to the next pipe section with three screws. The other end of the MI pipe section can then be attached by fitting another pipe section to it and snapping it together, as normal.

Assembling DVP-12A Slip Sections

The outer flue of the slip section should slide over the outer flue of the pipe section and into (inner flue) the last pipe section (see Figure 8.7).

Slide together to the desired length, making sure that a 1-1/2 inch outer flue overlap is maintained between the pipe section and slip section.

The pipe and slip section need to be secured by driving two screws through the overlapping portions of the outer flues using the pilot holes (see Figure 8.8).

This will secure the slip section to the desired length and prevent it from separating. The slip section can then be attached to the next pipe section.

If the slip section is too long, the inner and outer flues of the slip section can be cut to the desired length.
Securing the Vent Sections

Vertical Sections
Vertical sections of pipe must be supported every 8 feet after the 25 foot maximum unsupported rise. The vent support or plumber’s strap (spaced 120° apart) may be used to do this (see Figure 8.9).

Horizontal Sections
Horizontal sections of vent must be supported every 5 feet with a vent support or plumber’s strap.

B. Disassembly of Vent Sections
To disassemble any two pieces of pipe, rotate either section (see Figure 8.11), so that the seams on both pipe sections are aligned (see Figure 8.12). They can then be carefully pulled apart.

WARNING
Fire Risk.
Explosion Risk.
Combustion Fume Risk.
Use vent run supports per installation instructions.
Connect vent sections per installation instructions.
• Maintain all clearances to combustibles.
• Do NOT allow vent to sag below connection point to appliance.
Improper support may allow vent to sag or separate.
C. Installing Heat Shield and Horizontal Termination Cap

**WARNING**

Fire Hazard
Impaired performance of appliance
- Telescoping flue section of termination cap MUST be used when connecting pipe section to termination cap.
- Maintain a 1-1/2 inch minimum overlap on telescoping flue section of termination cap.

**WARNING**

Fire Risk
Exhaust Fumes Risk
Impaired Performance of Appliance
- Overlap pipe slip sections at least 1-1/2 inches.
- Use pilot holes for screws.
- Screws must not exceed 1 inch long.
- Pipe may separate if not properly joined.

**NOTE:** Where required, an exterior wall flashing is available. When penetrating a brick wall, a brick extension kit is available for framing the brick.

### Heat Shield Requirements for Horizontal Termination

For all horizontally vented appliances, a heat shield MUST be placed one inch above the top of the vent between the wall shield firestop and the base of the termination cap.

There are two sections of the heat shield. One section attaches to the wall shield firestop with two screws. The remaining section is attached to the cap in the same manner.

If the wall thickness does not allow the required 1-1/2 inch heat shield overlap, an extended heat shield must be used.

**Important Notice:** Heat shields may **not** be field constructed.

The extended heat shield (DVP-HSM-B) may need to be cut to length. You will attach the cut heat shield to the existing cap heat shield or wall shield firestop heat shield (refer to Figure 8.13) using the supplied screws. You MUST maintain a 1-1/2 in. (38 mm) overlap of the extended heat shield and the existing shields (both ends of the heat shield). The small leg on the extended heat shield should rest on the top of the vent (pipe section) to properly space it from the pipe section.

### Installing the Horizontal Termination Cap

Vent termination must not be recessed in the wall. Siding may be brought to the edge of the cap base.

Flash and seal as appropriate for siding material at outside edges of cap.

When installing a horizontal termination cap, follow the cap location guidelines as prescribed by current ANSI Z223.1 and CAN/CGA-B149 installation codes.

* 3 foot minimum in snow regions

Figure 8.15 Minimum Height from Roof to Lowest Discharge Opening

To attach the vertical termination cap (DVP-TVHW), slide the inner collar of the cap into the inner flue of the pipe section and place the outer collar of the cap over the outer flue of the pipe section.

Secure with three screws into the outer flue. Secure the cap by driving the three self-tapping screws (supplied) through the pilot holes in the outer collar of the cap into the outer flue of the pipe (see Figure 8.15).
Assembling and Installing Storm Collar

Connect both halves of the storm collar with two screws (see Figure 8.17).

Wrap the storm collar around the exposed pipe section and align brackets. Insert a bolt (provided) through the brackets and tighten nut to complete storm collar assembly (see Figure 8.18).

Slide the assembled storm collar down the pipe section until it rests on the roof flashing (see Figure 8.15).

Caulk around the top of the storm collar (see Figure 8.15).
9 Gas Information

A. Fuel Conversions
Before making gas connections ensure that appliance being installed is compatible with the available gas type. Any natural or propane gas conversions necessary to meet the appliance and locality needs must be made by a qualified technician using Hearth & Home Technologies specified and approved parts.

B. Gas Pressures
Proper input pressures are required for optimum appliance performance. Gas line sizing requirements need to be made following NFPA54.

C. Gas Connection

NOTE: Have the gas supply line installed in accordance with local building codes, if any. If not, follow ANSI 223.1. Installation should be done by a qualified installer approved and/or licensed as required by the locality. (In the Commonwealth of Massachusetts installation must be performed by a licensed plumber or gas fitter.)

NOTE: A listed (and Commonwealth of Massachusetts approved) 1/2 inch (13mm) T-handle manual shut-off valve and flexible gas connector are connected to the 1/2 inch (13mm) control valve inlet.
• If substituting for these components, please consult local codes for compliance.

Refer to Reference Section 16 for location of gas line access in appliance.

NOTE: Gas line may be run from either side of the appliance provided the hole in the outer wrap does NOT exceed 2-1/2 inches in diameter and does not penetrate the firebox.

WARNING

Fire Risk.
Explosion Hazard.
High pressure will damage valve.
• Disconnect gas supply piping BEFORE pressure testing gas line at test pressures above 1/2 psig.
• Close the manual shutoff valve BEFORE pressure testing gas line at test pressures equal to or less than 1/2 psig.

WARNING

Verify inlet pressures.
• High pressure may cause overfire condition.
• Low pressure may cause explosion.
• Verify minimum pressures when other household gas appliances are operating.
Install regulator upstream of valve if line pressure is greater than 1/2 psig.

Pressure requirements for appliance are shown in the table below. Minimum pressures must be met when other household gas appliances are operating.

<table>
<thead>
<tr>
<th>Pressure</th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Inlet Pressure</td>
<td>5.0 inches w.c.</td>
<td>11.0 inches w.c.</td>
</tr>
<tr>
<td>Maximum Inlet Gas Pressure</td>
<td>14.0 inches w.c.</td>
<td>14.0 inches w.c.</td>
</tr>
<tr>
<td>Manifold Pressure</td>
<td>3.5 inches w.c.</td>
<td>10.0 inches w.c.</td>
</tr>
</tbody>
</table>

WARNING

Gas Leak Risk
• Support control when attaching pipe to prevent bending gas line.

NOTE: The gap between supply piping and gas access hole may be caulked with high temperature caulk or stuffed with non-combustible, unfaced insulation to prevent cold air infiltration.
• Ensure that gas line does not come in contact with outer wrap of appliance. Follow local codes.

• Incoming gas line should be piped into the valve compartment and connected to the 1/2 inch connection on the manual shutoff valve.

---

**WARNING**

**Fire or Explosion Hazard**
- Gas buildup during line purge may ignite.
- Purge should be performed by qualified technician.
- Ensure adequate ventilation.
- Ensure there are no ignition sources such as sparks or open flames.

---

• A small amount of air will be in the gas supply lines. When first lighting appliance it will take a short time for air to purge from lines. When purging is complete the appliance will light and operate normally.

---

**WARNING**

**CHECK FOR GAS LEAKS**

Explosion Risk
Fire Risk
Asphyxiation Risk
- Check all fittings and connections.
- Do not use open flame.
- After the gas line installation is complete, all connections must be tightened and checked for leaks with a commercially-available, non-corrosive leak check solution. Be sure to rinse off all leak check solution following testing.

Fittings and connections may have loosened during shipping and handling.

---

**WARNING**

Fire hazard.
Do NOT change the valve settings.
- This valve has been preset at the factory.
- Changing valve settings may result in fire hazard or bodily injury.

---

**HIGH ALTITUDE INSTALLATIONS**

U.L. Listed gas appliances are tested and approved without requiring changes for elevations from 0 to 2000 feet in the U.S.A. and Canada.

When installing this appliance at an elevation above 2000 feet, it may be necessary to decrease the input rating by changing the existing burner orifice to a smaller size. Input rate should be reduced by 4% for each 1000 feet above a 2000 foot elevation in the U.S.A., or 10% for elevations between 2000 and 4500 feet in Canada. If the heating value of the gas has been reduced, these rules do not apply. To identify the proper orifice size, check with the local gas utility.

If installing this appliance at an elevation above 4500 feet (in Canada), check with local authorities.
NOTE: This appliance must be electrically wired and grounded in accordance with local codes or, in the absence of local codes, with National Electric Code ANSI/NFPA 70-latest edition or the Canadian Electric Code, CSA C221.1.

A 110-120 VAC circuit for this product must be protected with ground-fault circuit-interrupter protection, in compliance with the applicable electrical codes, when it is installed in locations such as in bathrooms or near sinks.

A. Intellifire Ignition System Wiring

This appliance requires a 110 VAC supply to the appliance junction box for operation. A wiring diagram is shown in Figure 10.1.

Figure 10.1 Intellifire Pilot Ignition (IPI) Wiring Diagram

**WARNING**

Wire 110V to electrical junction box.
Do NOT wire 110V to valve.
Do NOT wire 110V to wall switch.
- Incorrect wiring will damage millivolt valves.
- Incorrect wiring will override IPI safety lockout and may cause explosion.

Wire 110V to electrical junction box.
Do NOT wire 110V to valve.
Do NOT wire 110V to wall switch.
- Incorrect wiring will damage millivolt valves.
- Incorrect wiring will override IPI safety lockout and may cause explosion.
This appliance is equipped with an Intellifire control valve which operates on a 3 volt system.

This appliance is supplied with a battery pack and a 3 volt AC transformer, which requires the installation of the supplied junction box. It is highly recommended that the junction box be installed at this time to avoid reconstruction.

The battery pack requires two D cell batteries (not included). Batteries cannot be placed in the battery pack while using the 3 volt AC transformer. Conversely, the transformer must be unplugged if the battery pack is used.

**CAUTION**

Battery polarity must be correct or module damage will occur.

Optional Accessories Requirements

Wiring for optional accessories should be done now to avoid reconstruction.

Optional Accessories

Heat Zone Gas Kits are approved for use with this appliance as a heat management accessory. Refer to Section 7-B for installation instructions.

**CAUTION**

Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

**WARNING**

Shock hazard.
- Replace damaged wire with type 105º C rated wire.
- Wire must have high temperature insulation.

B. Wall Switch

This appliance comes standard with a WSK-SOUL-TMR wireless remote and wall mount timer. Determine whether the remote receiver will be installed in the appliance or mounted on the wall at this time.

Please refer to the separate remote instruction sheet and the installation instructions in the WSK-SOUL-TMR box to determine the location and proper installation.

- Keep wire lengths as short as possible by removing any excess wire.
- Low voltage and 110 VAC voltage cannot be shared within the same wall box.

C. Junction Box Installation

- Remove the screw attaching the junction box to the outer shell, rotate the junction box inward to disengage it from the outer shell (see Figure 10.2).
- Pull the electrical wires from outside the appliance through this opening into the valve compartment.
- Loosen the two screws on the Romex connector, feed the necessary length of wire through the connector and tighten the screws.
- Make all necessary wire connections to the receptacle and assemble the receptacle and cover to the junction box.

**CAUTION**

Do NOT wire 110 VAC to wall switch.

**NOTE:** Do NOT wire 110 VAC to wall switch.

Figure 10.2 Junction Box Detail
A. Mantel Projections

Figure 11.1 shows the minimum vertical and corresponding maximum horizontal dimensions of appliance mantels or other combustible projections above the top front edge of the appliance.

Note: All measurements in inches.

![Figure 11.1 Clearances to Mantels or other Combustibles above Appliance](image1)

Figure 11.2 For Halo front only: Clearance to Mantels or other Combustibles above Appliance

![Figure 11.2 For Halo front only: Clearance to Mantels or other Combustibles above Appliance](image2)

B. Facing Material

**WARNING**

Fire Risk

- Facing and/or finishing materials must never overhang into the glass opening.
- Overhanging materials may ignite.
- May interfere with proper operation of glass assembly.

![Figure 11.4 Non-combustible Facing Material](image3)

**WARNING**

Fire Risk.

- Follow these instructions exactly.
- Facing materials must be installed properly to prevent fire.
- No materials may be substituted without authorization by Hearth & Home Technologies.

![Figure 11.4 Non-combustible Facing Material](image4)
There are two different ways this unit can be set and finished. Figure 11.5 shows the appliance face flush with the wall covering material. Use the nailing tabs that are set back 1/2 inch on the sides of the appliance.

In either case, combustible materials must not overlap the metal face of the appliance, and no finishing material can pass the 3/8 inch metal edge around the opening and overhang into the glass opening.

C. Finishing Material Requirements

NOTE: Optional firescreen sits out 1-3/4 inches from the face of the appliance. When using thin finishing material, you may want to use thicker non-combustible backer board to bring the finishing material flush with the firescreen. This is not required.

When finishing the front of the appliance, no combustible materials can overlap the face of the appliance except the 4 inch high area below the appliance opening (see Figure 11.4).

There are two different ways this unit can be set and finished. Figure 11.5 shows the appliance face flush with the wall covering material. Use the nailing tabs that are set back 1/2 inch on the sides of the appliance.

In either case, combustible materials must not overlap the metal face of the appliance, and no finishing material can pass the 3/8 inch metal edge around the opening and overhang into the glass opening.

### WARNING

Fire Risk.

- Metal appliance front may be covered with non-combustible material only.
- Do NOT overlap combustible materials onto appliance front.
- Install combustible materials up to specified clearances on top, front and side.
- Seal joints between the finished wall and appliance top and sides using only a 300°F minimum sealant.

### WARNING

Fire Risk.

- Combustible materials must not overlap the metal face of the appliance.
- Finishing material CAN NOT pass the 3/8 inch metal edge around the opening and overhang into the glass opening.
- Failure to follow these instructions may result in a fire.

Figure 11.5 Installation of Appliance Flush with Wall Sheathing

Figure 11.6 Installation of Appliance Flush with Stud

Figure 11.4 Combustible and Non-Combustible Zones
For Halo Front Only

**NOTICE** Do NOT install non-combustible facing material if using the Halo surround or the surround will not fit properly. Non-combustible facing material MUST be used in all other Soulstice installations.

If installing a Halo front, the unit must be installed so that the appliance face is flush with the wall covering material. Use the nailing tabs that are set back 1/2 inch on the appliance sides. For the Halo front only, combustible material may be extended to flush with the screw heads on the side of the unit face.

D. Hearth Extension

Combustible material may cover the bottom face of the appliance only up to the bottom lip of the appliance opening which is 4 inches from the bottom of the appliance (see Figure 11.8).
12 Appliance Setup

A. Remove Shipping Materials
Remove shipping materials from inside or underneath the firebox.

B. Clean the Appliance
Clean/vacuum any sawdust that may have accumulated inside the firebox or underneath in the control cavity.

C. Accessories
Install approved accessories per instructions included with accessories. See Service Parts List for appropriate accessories. Refer to Section 16.

D. Ember Placement

![WARNING]
Shock or fire risk.
Use ONLY optional accessories approved for this appliance.
• Using non-listed accessories voids warranty.
• Using non-listed accessories may result in a safety hazard.
• Only Hearth & Home Technologies approved accessories may be used safely.

![NO EMBER MATERIAL IN THESE AREAS]

Explosion Risk.
• Follow ember placement instructions in manual.
• Do NOT place embers directly over burner ports.
• Replace ember material annually.

Improperly placed embers interferes with proper burner operation.

Placing the Ember Material
Two types of ember material are shipped with this appliance, Glowing Embers for the burner surface and Mystic Embers for the floor of the unit:

• Embers CANNOT be placed directly over ports. Care should be taken not to cover the lighting trail of ports.

Note: Do not place any embers in the circled areas as this will affect combustion (see Figure 12.1).

![Figure 12.1]

• When placing Glowing Embers® onto the burner, care should be taken so that the ports are not covered. Place dime-size ember pieces along side the port trail, but not on or in between the ports. Failure to follow this procedure will likely cause lighting and sooting problems.

• Place Mystic Embers on the floor of the appliance around the burner and grate. Use this material to give the appliance a realistic ash bed. Mystic Embers CANNOT be placed directly on the burner.

• Save the remaining ember materials for use during appliance servicing. The embers provided should be enough for 3 to 5 applications.
E. Positioning the Logs
Log Assembly: LOGS-SOUL

If the gas logs have been factory installed they do not need to be positioned. If the logs have been packaged separately, refer to these instructions.

CAUTION: Logs are fragile; carefully remove from packaging.

STEP 2. Place the grate on the base of the firebox surrounding the burner so that the short bars on the back side of the grate hook around the back side of the burner. The grate should be centered in the firebox.

STEP 3. (SRV2081-170): Place Log #1 across the burner so the right side of the log rests flat on the grate crossbar and the left side overhangs the back of the burner. The contour on the bottom of the log will match up with the contour of the burner and the notch on front of log will rest on top of the second tine from the right.

STEP 4. (SRV2081-171): Place Log #2 across the burner so the notches on the ends of the log fit over the grate on both the left side and the front crossbar. Again, the contours on the bottom of the log will match with the larger features on the face of the burner.

STEP 5. (SRV2081-172): Log #3 rests on the smooth cut outs on the top of both Log #1 and 2. There is a notch on the end of Log #3 that will fit over the grate on the right side.
F. Removing Glass Assembly

⚠️ WARNING

Handle glass doors with care.
- Inspect the gasket to ensure it is undamaged.
- Inspect the glass for cracks, chips or scratches.
- Do NOT strike, slam or scratch glass.
- Do NOT operate appliance with glass door removed, cracked, broken or scratched.
- Replace glass door assembly as a complete appliance.

- Remove the ashlip that is located in front of the glass.
- Remove the side panels located in front of the glass.
- Remove the pull mesh firescreen by unhooking it from the appliance.
- Unlatch the two latches at the bottom of the glass door (see Figure 12.8).
- Carefully pull the bottom of the door away from the appliance. Lower the door so the tabs on the top of the glass door pull out of the slots at the top of the firebox.

G. Screen Mesh

This appliance comes standard with hanging mesh and decorative firebrick panels. Follow the separate mesh instruction for proper installation.

H. Opening and Trim

Install optional marble and brass trim surround kits following the separate kit instructions. Marble, brass, brick, tile, or other non-combustible materials can be used to cover up the gap between the sheet rock and the appliance. Do not obstruct the glass opening.

I. Replacing Glass Assembly

- Angle the top of the glass door in toward the appliance and insert the tabs on top of the glass frame into the slots at the top of the firebox.
- Rotate the bottom of the glass door toward the firebox with slight upward pressure.
- Latch the bottom spring latches securely onto the bottom glass door tabs.

J. Shutter Settings

</tr>
</tbody>
</table>

Figure 12.8 Glass Assembly
A. Before Lighting Appliance

**CAUTION**

If installing Intellifire ignition battery backup:
- Do not install batteries if the backup mode may not be used for extended time.
- Batteries may leak.
- Install batteries only when needed for power outage.

**WARNING**

**HOT SURFACES!**
Glass and other surfaces are hot during operation AND cool down.
Hot glass will cause burns.
- DO NOT touch glass until it is cooled
- NEVER allow children to touch glass
- Keep children away

- CAREFULLY SUPERVISE children in same room as fireplace.
- Alert children and adults to hazards of high temperatures.

High temperatures may ignite clothing or other flammable materials.
- Keep clothing, furniture, draperies and other flammable materials away.

This appliance has been supplied with an integral barrier to prevent direct contact with the fixed glass panel. DO NOT operate the appliance with the barrier removed.
Contact your dealer or Hearth & Home Technologies if the barrier is not present or help is needed to properly install one.

**WARNING**

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or the gas supplier.

**WARNING**

Do NOT use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

Before operating this appliance have a qualified technician:
- Remove all shipping materials from inside and/or underneath the firebox.
- Review proper placement of logs and ember material.
- Check the wiring.
- Check the air shutter adjustment.
- Ensure that there are no gas leaks.
- Ensure that the glass is sealed and in the proper position.
- Ensure that the flow of combustion and ventilation air is not obstructed (front grilles and vent caps).

**WARNING**

Glass door must be in place when appliance is operating.
Risk of:
- Combustion Fumes
- Fire
Do NOT operate appliance with glass door removed.
- Open viewing glass for servicing only.
- Glass door MUST be in place and sealed before operating appliance.
- Only use glass door certified for use with appliance.
- Glass replacement should be done by qualified technician.
B. Lighting Appliance

IntelliFire Ignition

FOR YOUR SAFETY  READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance is equipped with an intermittent pilot ignition (IPI) device which automatically lights the burner. Do not try to light the burner by hand.

B. BEFORE LIGHTING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
• Do not try to light any appliance.

WARNING:

DO NOT CONNECT 110 VAC TO THE CONTROL VALVE.

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance.

This appliance needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air.

If not installed, operated, and maintained in accordance with the manufacturer’s instructions, this product could expose you to substances in fuel or fuel combustion which are known to the State of California to cause cancer, birth defects, or other reproductive harm.

Keep burner and control compartment clean. See installation and operating instructions accompanying appliance.

For additional information on operating your Hearth & Home Technologies fireplace, please refer to www.fireplaces.com.

CAUTION:
Hot while in operation. Do not touch. Keep children, clothing, furniture, gasoline and other liquids having flammable vapors away.

Do not operate the appliance with panel(s) removed, cracked or broken. Replacement of the panel(s) should be done by a licensed or qualified service person.

NOT FOR USE WITH SOLID FUEL
For use with natural gas and propane. A conversion kit, as supplied by the manufacturer, shall be used to convert this appliance to the alternate fuel.

Also Certified for Installation in a Bedroom or a Bedsitting Room.
For assistance or additional information, consult a qualified installer, service agency or the gas supplier.

LIGHTING INSTRUCTIONS (IPI)

1. Turn off all electric power to the appliance.

2. This appliance is equipped with an ignition device which automatically lights the burner. Do not try to light the burner by hand.

GAS VALVE

3. Wait five (5) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the Safety Information located on the left side of this label. If you don’t smell gas, go to next step.

4. Turn on all electric power to the appliance.

5. To light the burner, flip the ON/OFF switch to the “ON” position. (The ON/OFF switch may include a wall switch if so equipped).

6. If the appliance will not operate, follow the instructions “To Turn Off Gas to Appliance” and call your service technician or gas supplier.

TO TURN OFF GAS TO APPLIANCE

1. Turn off all electric power to the appliance if service is to be performed.

2. Flip ON/OFF switch to the “OFF” position.
C. After Appliance is Lit

Initial Break-in Procedure

NOTE: The appliance should be run three to four hours on the initial start-up. Turn it off and let it cool completely. Remove and clean the glass. Replace the glass and run the appliance for an additional 12 hours. This will help to cure the products used in the paint and logs.

During this break-in period it is recommended that some windows in the house be opened for air circulation. This will help avoid setting off smoke detectors, and help eliminate any odors associated with the appliance’s initial burning.

<table>

• Combustible materials may ignite. |

D. Frequently Asked Questions

<table>
<thead>
<tr>
<th>ISSUE</th>
<th>SOLUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Condensation of the glass</td>
<td>This is a result of gas combustion and temperature variations. As the appliance warms, this condensation will disappear.</td>
</tr>
<tr>
<td>Blue flames</td>
<td>This is a result of normal operation and the flames will begin to yellow as the appliance is allowed to burn for 20 to 40 minutes.</td>
</tr>
<tr>
<td>Odor from appliance</td>
<td>When first operated, this appliance may release an odor for the first several hours. This is caused by the curing of the paint and the burning off of any oils remaining from manufacturing. Odor may also be released from finishing materials and adhesives used around the appliance.</td>
</tr>
<tr>
<td>Film on the glass</td>
<td>This is a normal result of the curing process of the paint and logs. Glass should be cleaned within 3 to 4 hours of initial burning to remove deposits left by oils from the manufacturing process. A non-abrasive cleaner such as gas fireplace glass cleaner may be necessary. See your dealer.</td>
</tr>
<tr>
<td>Metallic noise</td>
<td>Noise is caused by metal expanding and contracting as it heats up and cools down, similar to the sound produced by a furnace or heating duct. This noise does not affect the operation or longevity of the appliance.</td>
</tr>
<tr>
<td>Is it normal to see the pilot flame burn continually?</td>
<td>In an Intellifire ignition system it is normal to see the pilot flame, but it should turn off when ON/OFF is turned off. In a standing pilot system the pilot will always stay on.</td>
</tr>
</tbody>
</table>
With proper installation, operation, and maintenance your gas appliance will provide years of trouble-free service. If you do experience a problem, this troubleshooting guide will assist a qualified service person in the diagnosis of a problem and the corrective action to be taken. This troubleshooting guide can only be used by a qualified service technician.

### A. Intellifire Ignition System

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. The ignitor/module makes noise, but no spark.</td>
<td>a. Incorrect wiring.</td>
<td>Verify “S” wire (white) for sensor and “I” wire (orange) for ignitor are connected to correct terminals on module and pilot assembly. Reversed wires at the module may cause system to make sparking noise, but spark may not be present at pilot hood.</td>
</tr>
<tr>
<td></td>
<td>b. Loose connections or electrical shorts in the wiring.</td>
<td>Verify no loose connections or electrical shorts in wiring from module to pilot assembly. Rod closest to pilot hood should be ignitor. Verify connections underneath pilot assembly are tight; also verify connections are not grounding out to metal chassis, pilot burner, pilot enclosure, mesh screen if present, or any other metal object.</td>
</tr>
<tr>
<td></td>
<td>c. Ignitor gap is too large.</td>
<td>Verify gap of igniter to pilot hood. The gap should be approximately .17 inch or 1/8 inch.</td>
</tr>
<tr>
<td></td>
<td>d. Faulty module.</td>
<td>Turn ON/OFF rocker switch or wall switch to OFF position. Remove ignitor wire “I” from module. Place ON/OFF Rocker switch or wall switch in ON position. Hold ground wire about 3/16 inch away from “I” terminal on module. If there is no spark at “I” terminal module must be replaced. If there is a spark at “I” terminal, module is fine. Inspect pilot assembly for shorted sparker wire or cracked insulator around electrode.</td>
</tr>
<tr>
<td>2. Pilot won’t light, there is no noise or spark.</td>
<td>a. Transformer installed correctly.</td>
<td>Verify that transformer is installed and plugged into module. Check voltage of transformer under load at spade connection on module with ON/OFF switch in ON position. Acceptable readings of a good transformer are between 3.2 and 2.8 volts AC.</td>
</tr>
<tr>
<td></td>
<td>b. A shorted or loose connection in wiring configuration or wiring harness.</td>
<td>Remove and reinstall the wiring harness that plugs into module. Verify there is a tight fit. Verify pilot assembly wiring to module. Remove and verify continuity of each wire in wiring harness.</td>
</tr>
<tr>
<td></td>
<td>c. Improper wall switch wiring.</td>
<td>Verify that 110/VAC power is “ON” to junction box.</td>
</tr>
<tr>
<td></td>
<td>d. Module not grounded.</td>
<td>Verify black ground wire from module wire harness is grounded to metal chassis of appliance.</td>
</tr>
<tr>
<td></td>
<td>e. Faulty module.</td>
<td>Turn ON/OFF rocker switch or wall switch to OFF position. Remove ignitor wire “I” from module. Place ON/OFF Rocker switch or wall switch in ON position. Hold ground wire about 3/16 inch away from “I” terminal on module. If there is no spark at “I” terminal module must be replaced. If there is a spark at “I” terminal, module is fine. Inspect pilot assembly for shorted sparker wire or cracked insulator around electrode.</td>
</tr>
<tr>
<td>3. Pilot lights but continues to spark, and main burner will not ignite. (If the pilot continues to spark after the pilot flame has been lit, flame rectification has not occurred.)</td>
<td>a. A shorted or loose connection in sensor rod.</td>
<td>Verify all connections to wiring diagram in manual. Verify connections underneath pilot assembly are tight. Verify connections are not grounding out to metal chassis, pilot burner, pilot enclosure or screen if present, or any other metal object.</td>
</tr>
<tr>
<td></td>
<td>b. Poor flame rectification or contaminated sensor rod.</td>
<td>Verify that flame is engulfing sensor rod. If the pilot assembly does not have a ground strap, consider installing one to increase flame rectification. Verify correct pilot orifice is installed and inlet gas specifications. Flame carries rectification current, not the gas. If flame lifts from pilot hood, the circuit is broken. A wrong orifice or too high an inlet pressure can cause pilot flame to lift. The sensor rod may be contaminated. Clean sensor rod with emery cloth.</td>
</tr>
<tr>
<td></td>
<td>c. Module is not grounded.</td>
<td>Verify that module is securely grounded to metal chassis of appliance. Verify that wire harness is firmly connected to module.</td>
</tr>
<tr>
<td>Symptom</td>
<td>Possible Cause</td>
<td>Corrective Action</td>
</tr>
<tr>
<td>-------------------------</td>
<td>-------------------------------------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>3. Continued</td>
<td>d. Damaged pilot assembly or dirty sensor rod.</td>
<td>Verify that ceramic insulator around the sensor rod is not cracked, damaged, or loose. Verify connection from sensor rod to white sensor wire. Clean sensor rod with emery cloth to remove any contaminants that may have accumulated on sensor rod. Verify continuity with a multimeter with ohms set at lowest range.</td>
</tr>
<tr>
<td></td>
<td>e. Faulty module.</td>
<td>Turn ON/OFF rocker switch or wall switch to OFF position. Remove ignitor wire “I” from module. Place ON/OFF Rocker switch or wall switch in ON position. Hold ground wire about 3/16 inch away from “I” terminal on module. If there is no spark at “I” terminal module must be replaced. If there is a spark at “I” terminal, module is fine. Inspect pilot assembly for shorted sparkler wire or cracked insulator around electrode.</td>
</tr>
<tr>
<td>4. Pilot sparks, but</td>
<td>a. Correct gas supply.</td>
<td>Verify that incoming gas line ball valve is “open”. Verify that inlet pressure reading is within acceptable limits, inlet pressure must not exceed 14 in. W.C.</td>
</tr>
<tr>
<td>Pilot will not light.</td>
<td>b. Ignitor gap is too large.</td>
<td>Verify that spark gap from ignitor to pilot hood is .17 in. or 1/8 in.</td>
</tr>
<tr>
<td></td>
<td>c. Module is not grounded.</td>
<td>Verify module is securely grounded to metal chassis of appliance.</td>
</tr>
</tbody>
</table>
A. Maintenance Tasks

Although the frequency of appliance servicing and maintenance will depend on use and the type of installation, a qualified service technician should perform an appliance check-up at the beginning of each heating season.

**WARNING**

Risk of injury or property damage.

**Before servicing:**
- Turn off gas.
- Turn off electricity to appliance.
- Disable remote control, if one is present.
- Ensure appliance is completely cooled.

**After servicing:**
- Replace any screen or barrier that was removed.
- Reseal and reinstall any venting removed for servicing.

**WARNING**

Annual inspection by qualified technician recommended.

**Check:**
- Condition of doors, surrounds and fronts.
- Condition of glass, glass assembly and glass seal.
- Obstructions of combustion and ventilation air.
- Condition of logs.
- Condition of firebox.
- Burner ignition and operation.
- Burner air shutter adjustment
- Gas connections and fittings.
- Obstructions of termination cap.

**Clean:**
- Glass
- Air passageways, grilles, control compartment
- Burner, burner ports

**Risk of:**
- Fire
- Delayed ignition or explosion
- Exposure to combustion fumes
- Odors

**CAUTION**

Handle glass assembly with care.

**NOTE:** Clean glass after initial 3-4 hours operation. Longer operation without cleaning glass may cause a permanent white film on glass.

When cleaning glass door:
- Avoid striking, scratching or slamming glass.
- Do NOT use abrasive cleaners.
- Use a hard water deposit glass cleaner on white film.
- Do NOT clean glass when hot.
- Turn off appliance after 3-4 hours of operation and ALLOW TO COOL.
- Remove and clean glass assembly.
- Replace glass assembly and operate appliance for additional 12 hours.

Refer to maintenance instructions.

**WARNING**

Inspect external vent cap regularly.

- Ensure no debris blocks cap.
- Combustible materials blocking cap may ignite.
- Restricted air flow affects burner operation.
<table>
<thead>
<tr>
<th>Inspect</th>
<th>Maintenance Tasks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Doors, Surrounds and Fronts</td>
<td>1. Assess condition of screen and replace as necessary.</td>
</tr>
<tr>
<td></td>
<td><strong>Recommend addition of screen if one is not present.</strong></td>
</tr>
<tr>
<td></td>
<td>2. Inspect for scratches, dents or other damage and repair as necessary.</td>
</tr>
<tr>
<td></td>
<td>3. Verify no obstructions to airflow through the louvers.</td>
</tr>
<tr>
<td></td>
<td>4. Verify maintenance of proper clearance to combustible household objects.</td>
</tr>
<tr>
<td>Gasket Seal, Glass Assembly and Glass</td>
<td>1. Inspect gasket seal and its condition.</td>
</tr>
<tr>
<td></td>
<td>2. Inspect glass panels for scratches and nicks that can lead to breakage when exposed to heat.</td>
</tr>
<tr>
<td></td>
<td>3. Confirm there is no damage to glass or glass frame. Replace as necessary.</td>
</tr>
<tr>
<td></td>
<td>4. Verify that latches engage properly, clip studs are not stripped, and glass attachment components are intact and operating properly. Replace as necessary.</td>
</tr>
<tr>
<td></td>
<td>5. Clean glass. Replace glass assembly if severely coated with silicate deposits that cannot be removed.</td>
</tr>
<tr>
<td>Valve Compartment and Firebox Top</td>
<td>1. Vacuum and wipe out dust, cobwebs, debris or pet hair. Use caution when cleaning these areas. Screw tips that have penetrated the sheet metal are sharp and should be avoided.</td>
</tr>
<tr>
<td></td>
<td>2. Remove any foreign objects.</td>
</tr>
<tr>
<td></td>
<td>3. Verify unobstructed air circulation.</td>
</tr>
<tr>
<td>Logs</td>
<td>1. Inspect for broken, damaged, or missing logs. Replace as necessary.</td>
</tr>
<tr>
<td></td>
<td>2. Verify correct log placement and no flame impingement causing sooting. Correct as necessary.</td>
</tr>
<tr>
<td>Firebox</td>
<td>1. Inspect for paint condition, warpage, corrosion or perforation. Sand and repaint as necessary.</td>
</tr>
<tr>
<td></td>
<td>2. Replace appliance if firebox has been perforated.</td>
</tr>
<tr>
<td>Burner Ignition and Operation</td>
<td>1. Verify burner is properly secured and aligned with pilot or igniter.</td>
</tr>
<tr>
<td></td>
<td>2. Clean off burner top, inspect for plugged ports, corrosion or deterioration. Replace burner if necessary.</td>
</tr>
<tr>
<td></td>
<td>3. Replace ember materials with new dime-size and shape pieces. Do not block ports or obstruct lighting paths.</td>
</tr>
<tr>
<td></td>
<td>4. Check for smooth lighting and ignition carryover to all ports. Verify there is no ignition delay.</td>
</tr>
<tr>
<td></td>
<td>5. Inspect for lifting or other flame problems.</td>
</tr>
<tr>
<td></td>
<td>6. Verify air shutter is clear of dust and debris.</td>
</tr>
<tr>
<td></td>
<td>7. Inspect orifice for soot, dirt or corrosion.</td>
</tr>
<tr>
<td></td>
<td>8. Verify manifold and inlet pressures. Adjust regulator as required.</td>
</tr>
<tr>
<td></td>
<td>9. Inspect pilot flame strength. Clean or replace orifice as necessary.</td>
</tr>
<tr>
<td></td>
<td>10. Inspect thermocouple/thermopile or IPI sensor rod for soot, corrosion and deterioration. Clean with emery cloth or replace as required.</td>
</tr>
<tr>
<td></td>
<td>11. Verify millivolt output. Replace as necessary.</td>
</tr>
<tr>
<td>Venting</td>
<td>1. Inspect venting for blockage or obstruction such as bird nests, leaves, etc.</td>
</tr>
<tr>
<td></td>
<td>2. Confirm that termination cap remains clear and unobstructed by plants, etc.</td>
</tr>
<tr>
<td></td>
<td>3. Verify that termination cap clearance to subsequent construction (building additions, decks, fences or sheds) has been maintained.</td>
</tr>
<tr>
<td></td>
<td>4. Inspect for corrosion or separation.</td>
</tr>
<tr>
<td></td>
<td>5. Verify weather stripping, sealing and flashing remains intact.</td>
</tr>
<tr>
<td></td>
<td>6. Inspect draft shield to verify it is not bent, damaged or missing.</td>
</tr>
<tr>
<td>Remote controls</td>
<td>1. Verify operation of remote.</td>
</tr>
<tr>
<td></td>
<td>2. Replace batteries in remote transmitters and battery-powered receivers.</td>
</tr>
<tr>
<td></td>
<td>3. Verify batteries have been removed from battery back-up IPI systems to prevent premature battery failure or leaking.</td>
</tr>

B. Vent Components Diagrams (continued)

Note: Heat shields MUST overlap by a minimum of 1-1/2 in. (38 mm). The heat shield is designed to be used on a wall 4 in. to 7-1/4 in. (102 mm to 184 mm) thick. If wall thickness is less than 4 in. (102 mm) the existing heat shields must be field trimmed. If wall thickness is greater than 7-1/4 in. (184 mm) a DVP-HSM-B will be required.

D. Limited Lifetime Warranty

Hearth & Home Technologies Inc.
LIMITED LIFETIME WARRANTY

Hearth & Home Technologies Inc., on behalf of its hearth brands ("HHT"), extends the following warranty for HHT gas, wood, pellet, coal and electric hearth appliances that are purchased from an HHT authorized dealer.

**WARRANTY COVERAGE:**

HHT warrants to the original owner of the HHT appliance at the site of installation, and to any transferee taking ownership of the appliance at the site of installation within two years following the date of original purchase, that the HHT appliance will be free from defects in materials and workmanship at the time of manufacture. After installation, if covered components manufactured by HHT are found to be defective in materials or workmanship during the applicable warranty period, HHT will, at its option, repair or replace the covered components. HHT, at its own discretion, may fully discharge all of its obligations under such warranties by replacing the product itself or refunding the confirmed purchase price of the product itself. The maximum amount recoverable under this warranty is limited to the purchase price of the product. This warranty is subject to conditions, exclusions and limitations as described below.

**WARRANTY PERIOD:**

Warranty coverage begins on the date of installation. In the case of new home construction, warranty coverage begins on the date of first occupancy of the dwelling or six months after the sale of the product by an independent, authorized HHT dealer/ distributor, whichever occurs earlier. The warranty shall commence no later than 24 months following the date of product shipment from HHT, regardless of the installation or occupancy date. The warranty period for parts and labor for covered components is produced in the following table.

The term “Limited Lifetime” in the table below is defined as: 20 years from the beginning date of warranty coverage for gas appliances, and 10 years from the beginning date of warranty coverage for wood, pellet, and coal appliances. These time periods reflect the minimum expected useful lives of the designated components under normal operating conditions.

See conditions, exclusions, and limitations on next page.
D. Limited Lifetime Warranty (continued)

**WARRANTY CONDITIONS:**
- This warranty only covers HHT appliances that are purchased through an HHT authorized dealer or distributor. A list of HHT authorized dealers is available on the HHT branded websites.
- This warranty is only valid while the HHT appliance remains at the site of original installation.
- Contact your installing dealer for warranty service. If the installing dealer is unable to provide necessary parts, contact the nearest HHT authorized dealer or supplier. Additional service fees may apply if you are seeking warranty service from a dealer other than the dealer from whom you originally purchased the product.
- Check with your dealer in advance for any costs to you when arranging a warranty call. Travel and shipping charges for parts are not covered by this warranty.

**WARRANTY EXCLUSIONS:**
This warranty does not cover the following:
- Changes in surface finishes as a result of normal use. As a heating appliance, some changes in color of interior and exterior surface finishes may occur. This is not a flaw and is not covered under warranty.
- Damage to printed, plated, orenameled surfaces caused by fingerprints, accidents, misuse, scratches, melted items, or other external sources and residues left on the plated surfaces from the use of abrasive cleaners or polishes.
- Repair or replacement of parts that are subject to normal wear and tear during the warranty period. These parts include: paint, wood, pellet and coal gaskets; firebricks; grates; flame guides; and the discoloration of glass.
- Minor expansion, contraction, or movement of certain parts causing noise. These conditions are normal and complaints related to this noise are not covered by this warranty.
- Damages resulting from: (1) failure to install, operate, or maintain the appliance in accordance with the installation instructions, operating instructions, and listing agent identification label furnished with the appliance; (2) failure to install the appliance in accordance with local building codes; (3) shipping or improper handling; (4) improper operation, abuse, misuse, continued operation with damaged, corroded or failed components, accident, or improperly/incorrectly performed repairs; (5) environmental conditions, inadequate ventilation, negative pressure, or drafting caused by tightly sealed constructions, insufficient make-up air supply, or handling devices such as exhaust fans or forced air furnaces or other such causes; (6) use of fuels other than those specified in the operating instructions; (7) installation or use of components not supplied with the appliance or any other components not expressly authorized and approved by HHT; (8) modification of the appliance not expressly authorized and approved by HHT in writing; and/or (9) interruptions or fluctuations of electrical power supply to the appliance.
- Non-HHT venting components, hearth components or other accessories used in conjunction with the appliance.
- Any part of a pre-existing fireplace system in which an insert or a decorative gas appliance is installed.
- HHT’s obligation under this warranty does not extend to the appliance’s capability to heat the desired space. Information is provided to assist the consumer and the dealer in selecting the proper appliance for the application. Consideration must be given to appliance location and configuration, environmental conditions, insulation and air tightness of the structure.

**This warranty is void if:**
- The appliance has been over-fired or operated in atmospheres contaminated by chlorine, fluorine, or other damaging chemicals. Over-firing can be identified by, but not limited to, warped plates or tubes, rust colored cast iron, bubbling, cracking and discoloration of steel or enamel finishes.
- The appliance is subjected to prolonged periods of dampness or condensation.
- There is any damage to the appliance or other components due to water or weather damage which is the result of, but not limited to, improper chimney or venting installation.

**LIMITATIONS OF LIABILITY:**
- The owner’s exclusive remedy and HHT’s sole obligation under this warranty, under any other warranty, express or implied, or in contract, tort or otherwise, shall be limited to replacement, repair, or refund, as specified above. In no event will HHT be liable for any incidental or consequential damages caused by defects in the appliance. Some states do not allow exclusions or limitation of incidental or consequential damages, so these limitations may not apply to you. This warranty gives you specific rights; you may also have other rights, which vary from state to state. EXCEPT TO THE EXTENT PROVIDED BY LAW, HHT MAKES NO EXPRESS WARRANTIES OTHER THAN THE WARRANTY SPECIFIED HEREIN. THE DURATION OF ANY IMPLIED WARRANTY IS LIMITED TO DURATION OF THE EXPRESSED WARRANTY SPECIFIED ABOVE.
