Installation Manual
Installation and Appliance Setup

INSTALLER: Leave this manual with party responsible for use and operation.
OWNER: Retain this manual for future reference.

NOTICE: DO NOT discard this manual!

Models: JASPER30IN

WARNING:
FIRE OR EXPLOSION HAZARD
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

- DO NOT store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- What to do if you smell gas
  - DO NOT try to light any appliance.
  - DO NOT touch any electrical switch. DO NOT use any phone in your building.
  - Leave the building immediately.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

⚠️ DANGER
HOT GLASS WILL CAUSE BURNS.
DO NOT TOUCH GLASS UNTIL COOLED.
NEVER ALLOW CHILDREN TO TOUCH GLASS.

A barrier designed to reduce the risk of burns from the hot viewing glass is provided with this appliance and shall be installed for the protection of children and other at-risk individuals.

This appliance may be installed as an OEM installation in manufactured home (USA only) or mobile home and must be installed in accordance with the manufacturer’s instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280 in the United States, or the Standard for Installation in Mobile Homes, CAN/CSA Z240 MH Series, in Canada.
This appliance is only for use with the type(s) of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

In the Commonwealth of Massachusetts installation must be performed by a licensed plumber or gas fitter.
See Table of Contents for location of additional Commonwealth of Massachusetts requirements.
Safety Alert Key:
• **DANGER!** Indicates a hazardous situation which, if not avoided will result in death or serious injury.
• **WARNING!** Indicates a hazardous situation which, if not avoided could result in death or serious injury.
• **CAUTION!** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
• **NOTICE:** Used to address practices not related to personal injury.

### Installation Standard Work Checklist

**ATTENTION INSTALLER:**

*Follow this Standard Work Checklist*

This standard work checklist is to be used by the installer in conjunction with, not instead of, the instructions contained in this installation manual.

<table>
<thead>
<tr>
<th>Customer:</th>
<th>Date Installed:</th>
<th>Model (circle one): JASPER30IN</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lot/Address:</td>
<td>Location of Fireplace:</td>
<td>Installer:</td>
</tr>
<tr>
<td>Dealer/Distributor Phone #:</td>
<td>Serial #:</td>
<td></td>
</tr>
</tbody>
</table>

---

**WARNING! Risk of Fire or Explosion!** Failure to install appliance according to these instructions could lead to a fire or explosion.

#### Appliance Install
- Verify fireplace is clean and remove/block open damper/modify damper for vent pipe clearance (Section 4).
- Locate multi-purpose tool (Section 2).
- Appliance is leveled and secured (Section 5.F).

#### Venting/Chimney Section 5
- Exhaust and inlet flex vent pipe are properly formed and routed through existing fireplace damper.
- Exhaust and inlet flex vent pipe are properly installed to the correct collars, sealed and secured to top slide plate and to the termination cap.
- Vertical restrictors are properly set (if applicable).
- Exterior roof flashing installed and sealed.
- Termination cap installed, secured and sealed to top slide plate.

#### Electrical Section 6
- Unswitched power (110-120 VAC) provided to the appliance.
- Switch wires properly installed.

#### Gas Section 7
- Proper appliance for fuel type.
- Was a conversion performed?
- Leak check performed and inlet pressure verified.
- Verified proper air shutter setting for installation type.

#### Finishing Section 8
- Combustible materials not installed in non-combustible areas.
- Verified all clearances meet installation manual requirements.
- Mantels and wall projections comply with installation manual requirements.

#### Appliance Setup Section 9
- All packaging and protective materials removed (inside & outside of appliance).
- Refractories, logs, media and embers installed correctly.
- Glass assembly and glass seal plate installed and secured.
- Accessories installed properly.
- Surround and decorative front properly installed. See instructions shipped with appliance front.
- Manual bag and all of its contents are removed from inside/under the appliance and given to party responsible for use and operation.
- Fireplace warning plate is attached to the existing woodburning fireplace.
- Started appliance and verified no gas leaks exist.

---

Hearth & Home Technologies recommends the following:
- Photographing the installation and copying this checklist for your file.
- That this checklist remain visible at all times on the appliance until the installation is complete.

**Comments:** Further description of the issues, who is responsible (Installer/Builder/Other Trades, etc) and corrective action needed

---

Comments Communicated to party responsible __________________ by __________________ on __________________

Builder / Gen. Contractor/ (Installers) (Date)

2546-982 11/18
1 Product Specific and Important Safety Information

A. Appliance Certification

**MODELS:** JASPER30IN  
**LABORATORY:** Underwriters Laboratories, Inc. (UL)  
**TYPE:** Direct Vent Heater  
**STANDARD:** ANSI Z21.88-2017 CSA 2.33-2017

This product is listed to ANSI standards for “Vented Gas Fireplace Heaters” and applicable sections of “Gas Burning Heating Appliances for Manufactured Homes and Recreational Vehicles”, and “Gas Fired Appliances for Use at High Altitudes”.

Majestic gas inserts are designed for installations into solid fuel masonry or factory built fireplaces that have been installed in accordance with the National, Provincial, State and local building codes. Fireplaces are to be constructed of non-combustible materials and, in the absence of local or regional codes, meet criteria of NFPA 211. No additional outside air source is required.

**NOTICE:** This installation must conform with local codes. In the absence of local codes you must comply with the National Fuel Gas Code, ANSI Z223.1-latest edition in the U.S.A. and the CAN/CGA B149 Installation Codes in Canada.

B. Glass Specifications

This appliance is equipped with 5 mm ceramic glass. Replace glass only with 5 mm ceramic glass. Please contact your dealer for replacement glass.

C. BTU Specifications

<table>
<thead>
<tr>
<th>Models</th>
<th>Maximum Input BTU/h</th>
<th>Minimum Input BTU/h</th>
<th>Orifice Size (DMS)</th>
</tr>
</thead>
<tbody>
<tr>
<td>JASPER30IN (NG) (0-2000 FT)</td>
<td>30,000</td>
<td>21,000</td>
<td>37</td>
</tr>
<tr>
<td>JASPER30IN (Propane) (0-2000 FT)</td>
<td>28,000</td>
<td>19,600</td>
<td>52</td>
</tr>
</tbody>
</table>

D. High Altitude Installations

**NOTICE:** If the heating value of the gas has been reduced, these rules do not apply. Check with your local gas utility or authorities having jurisdiction.

When installing above 2000 feet elevation:

- In the USA: Reduce input rate 4% for each 1000 feet above 2000 feet.
- In CANADA: Input ratings are certified without a reduction of input rate for elevations up to 4500 feet (1370 m) above sea level. Please consult provincial and/or local authorities having jurisdiction for installations at elevations above 4500 feet (1370 m).

Check with your local gas utility to determine proper orifice size.

E. Non-Combustible Materials Specification

Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.

Materials that are reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 ºC shall be considered non-combustible materials.

F. Combustible Materials Specification

Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or plastered or unplastered shall be considered combustible materials.

G. Electrical Codes

**NOTICE:** This appliance must be electrically wired and grounded in accordance with local codes or, in the absence of local codes, with National Electric Code ANSI/NFPA 70-latest edition or the Canadian Electric Code CSA C22.1.

- A 110-120 VAC circuit for this product must be protected with ground-fault circuit-interrupter protection, in compliance with the applicable electrical codes, when it is installed in locations such as in bathrooms or near sinks.

H. California

**WARNING:** This product and the fuels used to operate this product (liquid propane or natural gas), and the products of combustion of such fuels, can expose you to chemicals including benzene, which is known to the State of California to cause cancer and reproductive harm. For more information go to: www.P65Warnings.ca.gov.
2 Getting Started

A. Design and Installation Considerations

Majestic gas inserts are designed for installations into solid fuel masonry or UL127 listed factory built fireplaces. No additional outside air source is required. Installation MUST comply with local, regional, state and national codes and regulations. Consult insurance carrier, local building inspector, fire officials or authorities having jurisdiction over restrictions, installation inspection and permits.

Prior to installing the gas insert:

- Ensure chimney is constructed of non-combustible materials.
- Ensure chimney is clean and in good working order.
- Ensure that all chimney cleanouts fit properly to prevent air leakage into chimney.
- Ensure combustible mantel and surround clearances comply with insert requirements.
- Ensure all joints are properly engaged and the chimney is properly secured.
- Determine minimum fireplace size. See Section 3.A and 3.B.
- Determine gas supply piping requirements.
- Determine electrical wiring requirements.
- Determine finishing details.
- Determine whether optional accessories—devices such as a wall switch or remote control—are desired.

Installation and service of this appliance should be performed by qualified personnel. Hearth & Home Technologies recommends HHT Factory Trained or NFI certified professionals.

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. For assistance or additional information, consult a qualified service technician, service agency or your dealer.

Multi-Purpose Tool

- See Figure 2.1 for multi-purpose tool functions and features.
- See Figure 2.2 for multi-purpose tool shipping location.
- See Figure 2.3 for multi-purpose tool storage location options.

Figure 2.1 Multi-Purpose Tool

![Multi-Purpose Tool Diagram]
Multi-Purpose Tool - Shipping Location

- Remove multi-purpose tool by cutting and discarding zip-tie.
- See Figure 2.3 for multi-purpose tool storage.
- See Figure 2.1 for multi-purpose tool features / functions.

Figure 2.2 Multi-Purpose Tool shipping Location

Multi-Purpose Tool - Storage Options

**OPTION A**
Multi-purpose tool can be stored behind the appliance front.

**OPTION B**
Multi-purpose tool can be stored behind the surround.

**OPTION C**
Multi-purpose tool can be stored in appliance manual bag.

Figure 2.3 Multi-Purpose Tool Storage Options

**DO NOT** store appliance manual bag in or around the appliance.
D. Inspect Appliance and Components

- Carefully remove the appliance and components from the packaging.
- The vent system components, decorative fronts and surrounds are shipped in separate packages.
- If packaged separately, the log set must be installed.
- Report to your dealer any parts damaged in shipment, particularly the condition of the glass.
- Read all of the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.

WARNING! Risk of Fire or Explosion! Damaged parts could impair safe operation. DO NOT install damaged, incomplete or substitute components. Keep appliance dry.

Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by, the following actions:
- Installation and use of any damaged appliance or vent system component.
- Modification of the appliance or vent system.
- Installation other than as instructed by Hearth & Home Technologies.
- Improper positioning of the gas logs or the glass door.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.

Any such action may cause a fire hazard.

WARNING! Risk of Fire, Explosion or Electric Shock! DO NOT use this appliance if any part has been under water. Call a qualified service technician to inspect the appliance and to replace any part of the control system and/or gas control which has been under water.

B. Good Faith Wall Surface

If installing a television (TV) above the appliance, see Section 3 of the appliance Owner’s Manual.

NOTICE: Temperatures listed above are taken with a temperature measuring probe as prescribed by the test standard used for appliance certification. Temperatures on walls or mantels taken with an infrared thermometer may yield increased temperatures of up to 30 °F or more depending on the thermometer settings and material characteristics being measured. Use appropriate finishing materials that are able to withstand these conditions. For additional finishing guidelines. See Section 8.

C. Tools and Supplies Needed

Before beginning the installation be sure that the following tools and building supplies are available.

- Tape measure
- Pliers
- Hammer
- Phillips screwdriver
- Voltmeter
- Electric drill and bits (1/4 in.)
- Gloves
- Safety glasses
- Level
- Reciprocating saw
- Manometer
- Flat blade screwdriver
- Stove cement / Aluminum foil tape
- 3/16 in. Allen wrench (Rear Leveling Legs)
- Elongated pressure taps (Recommended)
- Noncorrosive leak check solution
- Caulking material (300 °F minimum continuous exposure rating)

Figure 2.4  Good Faith Wall Surface Temperatures Above Appliance
A. Appliance/Decorative Front Dimension Diagrams

Dimensions are actual appliance dimensions. Use for reference only. For additional clearances refer to Section 3.D and 3.E.

*Note: Location G is the appliance depth measurement, for installation depth reference Location E on Figure 3.7.

Figure 3.7 Appliance Dimensions
**NOTICE:** 1/2 inch gap must be maintained or components will overheat.

*G
B. Minimum Fireplace Opening

Minimum fireplace opening requirements for a standard 3/4 inch deep surround are shown in Figure 3.7. For smaller openings, a custom surround is available.

**WARNING! Risk of Fire or Burns!** Provide adequate clearance around air openings and for service access. Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

For Installation into a Zero Clearance Wood burning fireplace:

- The brick (refractory), glass doors, screen rails, screen mesh and log grates can be removed from a factory built firebox in order to gain minimum gas insert opening requirements.
- Any smoke shelves, shields and baffles may be removed from the factory built firebox if attached with mechanical fasteners.

![Figure 3.5 Solid Fuel Floor Clearance](image)

- The appliance may not be placed directly on the base of the outer wrap, a 1/4 inch airspace **MUST** be provided between the insert and the floor of the outer wrap. Use the leveling legs to raise the insert a minimum of 1/4 inch. The original fireplace may never be returned to solid fuel in this condition. The sidewalls and top structure of the firebox may not be altered with the exception of removable baffles and dampers.

![Figure 3.7 Solid Fuel Firebox](image)

- The metal floor of the solid fuel firebox may be removed to facilitate the installation of the insert.
- A metal lip protuding above the hearth pad of the solid fuel firebox may be removed. See Figure 3.7.

![Figure 3.8 Minimum Required 1/2 in. Gap](image)

**NOTICE:** 1/2 inch gap must be maintained or components will overheat.
Custom Surrounds

Custom surrounds are available. See your dealer for information. Standard surrounds are 3/4 inches deep. Custom surrounds are available up to 3 inches deep. A 3 inch deep surround would reduce the unit opening depth \( E^* \) by 2-1/4 inches (3 in. - 3/4 in. = 2-1/4 in).

On Site Custom Surrounds

On site custom surrounds are available. See your dealer for information. On site custom surrounds are flush and have no depth. A flush surround would increase the unit opening depth \( E^* \) by 3/4 inch.

In addition to these dimensions, also reference Section 3.D and 3E.

Note: Dimensions assume 1/4 inch clearance on all sides.

Note: If exhaust collar on insert and fireplace damper do not line up, add 4 inches (102 mm) to minimum fireplace height for bends in vent pipe.
C. Zero Clearance Wall Extension

Surrounds MUST overlap wall extension.

A non-combustible wall extension can be used to cover an existing masonry surface. Wall extensions are typically used to improve cosmetics.

**WARNING! Risk of Fire!** Comply with all minimum clearances to combustibles as specified. Framing or finishing material closer than the minimums listed must be constructed entirely of noncombustible materials (i.e., steel studs, concrete board, etc).

Combustible facings must not extend behind the insert surround. See Section 1.E and 1.F.

**Non-Combustible Materials Specification**

Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass or plasters, or any combination thereof.

Materials that are reported as passing ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 °C.

<table>
<thead>
<tr>
<th>UNIT</th>
<th>X (min)</th>
<th>Y (min)</th>
</tr>
</thead>
<tbody>
<tr>
<td>30 in.</td>
<td>33-1/2</td>
<td>56</td>
</tr>
</tbody>
</table>

**Figure 3.10** Non-Combustible Framing Requirement

- Facing and/or finishing materials must not interfere with air flow through decorative fronts.
- Facing and/or finishing materials must never overhang into the glass opening.
- Observe all clearances when applying combustible materials.
- Maximum depth of wall extension is 12 inches. This may be limited by the flex pipe’s ability to connect to the starting collar.
- Covering combustible materials with non-combustible materials does not qualify material as non-combustible.

**WARNING! Risk of Fire!** DO NOT apply combustible materials beyond the minimum clearances. Comply with all minimum clearances to combustibles as specified in this manual. Overlapping materials could ignite and will interfere with proper operation of decorative fronts.
Wall Extension

Wall extension must be sealed to existing masonry wall. See Figure 3.13. Framing studs may not sit flush against existing masonry wall. In order to keep heat from escaping behind the wall this transition must be sealed.

- Seal with a high temperature silicone 300 °F.
  
  and / or

- Packing insulation into voids between the masonry wall and steel studs is acceptable.

**Note:** Combustible materials may be used to seal wall extension to existing masonry wall as long as it is outside the non-combustible zone.

**Painting**

If desired finishing includes a painted wall, a high-quality 100% acrylic latex paint with a high-quality latex primer base coat are recommended around the appliance to limit discoloration. Oil-based or standard acrylic paints may be more prone to discoloration due to heat exposure.

**Drywall Joint-Crack Prevention and Repair**

Drywall joints around the fireplace will be affected by exposure to elevated temperatures, along with other environmental, structural factors due to new construction, and methods used to install and finish the drywall. If a crack does emerge adjacent to the fireplace, it can be permanently repaired by filling it with a paintable latex caulk, followed by repainting.

Some movement of the screws used to secure the non-combustible board to the appliance/surround framing is expected. If a blemish begins to show over a screw head, sand the surface to remove the blemish and repaint.

**NOTE:** Concealed sections of 3 in. flex pipe must be contained inside existing masonry fireplace flue vent or installed into an existing wood burning vent system.
D. Mantel, Wall Projections, & Hearth Extensions

**WARNING! Risk of Fire!** Comply with all minimum clearances to combustibles as specified. Framing or finishing material closer than the minimums listed must be constructed entirely of noncombustible materials (i.e., steel studs, concrete board, etc).

Clearance to combustible material under the insert is 1/4 inch (6 mm).
- Use leveling legs to raise insert minimum 1/4 inch (6 mm) above combustible material or outer wrap of factory built firebox.

Combustible facings must not extend behind the insert surround. For non-combustible material specifications refer to Section 1.E and 1.F.

**Mantel Legs or Wall Projections**

![Figure 3.14 Clearances to Mantel Legs or Wall Projections (Acceptable on both sides of surround opening)](image)

**Mantels or Wall Projections - Non-Combustible**

Mantels - Combustible

E. Hearth Extension

- All flooring and hearth material must remain below the bottom of the surround. See Figure 3.18.
- Combustible flooring may be located in front of the appliance. Exception - no vinyl/adhesive flooring. See Figure 3.19.
- 1/2 inch gap under the bottom of the front must be maintained. See Figure 3.17.
- A minimum 1/4 inch gap from the bottom of the appliance to the metal floor of the solid fuel firebox is REQUIRED. See side view in Figure 3.20.
- Combustible flooring underneath the appliance is acceptable with a 1/4 inch gap. See Figure 3.20.

Installation Preparation

Prepare the existing solid fuel masonry or factory built non-combustible firebox for installation.

A. Cleaning
Prior to installing the gas insert:
• Ensure that the woodburning fireplace cavity is clean and free of ash, soot, and other debris.

B. Flue Damper
Fully lock the solid fuel fireplace’s flue damper in the open position, OR completely remove it.

C. Gas Line
Note: If the factory built fireplace has no gas access hole provided, an access hole of 1 inch (25 mm) diameter or less may be drilled through the lower sides or bottom of the firebox in a proper workmanship - like manner. This access hole must be plugged with non-combustible insulation after the gas supply line has been installed.
• Install gas line to the factory provided flex line. See Figure 4.1.
• Check local codes and gas line sizing requirements following NFPA54. See Section 7.
• It is recommended that extra length of gas line be installed within the existing wood burner or masonry fireplace to allow removal of the insert for future servicing needs.

D. Fireplace Conversion Notice
The fireplace conversion notice is included in the appliance manual bag. Permanently attach the label with the following warning to the inside lower back of the fireplace firebox into which the insert is being installed. Silicone or mechanical fasteners may be required to properly secure the label.

WARNING! Risk of Fire! This fireplace has been converted for use with a gas fireplace insert only and cannot be used for burning wood or solid fuels unless all original parts have been replaced, and the fireplace re-approved by the authority having jurisdiction.

E. Electrical Outlet Box
An outlet box may be installed in a bottom back corner of the existing solid fuel masonry or factory built fireplace to power the appliance. Each unit ships standard with a cord assembly to permit blowers or other optional accessories to be used. The accessories plug into the new outlet box or may be routed out onto the hearth to a nearby outlet.

NOTICE: DO NOT wire 110-120 VAC to wall switch.

**WARNING! Risk of Fire/Explosion/Asphyxiation!** Do NOT connect this gas appliance to a chimney flue serving a separate solid fuel or gas burning appliance.

- Could impair safe operation of this appliance or other appliances connected to the flue.
- Vent this appliance directly outside.
- Use separate vent system for this appliance.

**CAUTION! ALL vent specifications MUST be followed.**

This product is tested and listed to these specifications. Appliance performance will suffer if specifications are not followed.

---

**Figure 5.1**

*NOTE: TO ACHIEVE OPTIMUM PERFORMANCE OF INSERT, MINIMIZE OR AVOID BENDS IN EXHAUST VENT PIPE.*

- BE SURE SLIDE PLATE SCREW IS FULLY TIGHTENED.

- COLLAR SLIDE PLATE ASSEMBLY INSTALLED.
B. Using Vertical Restrictor

When 25+ feet of vertical venting is used, vertical restrictors will need to be adjusted. See Figure 5.2 and 5.3.

---

Figure 5.2 Min. / Max. Venting Requirement

**V = 10 FT. MINIMUM 50 FT. MAXIMUM**

NOTE: TO ACHIEVE OPTIMUM PERFORMANCE OF INSERT, MINIMIZE OR AVOID BENDS IN EXHAUST VENT PIPE.

---

Figure 5.3 Firebox Baffle

To open restrictors, push the restrictor doors upward. The restrictor doors should be bent at a 90°. See Figure 5.3.

Opening restrictors will help reduce cold start or sooting issues (cycling).

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>10 ft. - 25 ft.</td>
<td>No adjustment needs to be done.</td>
</tr>
<tr>
<td>26 ft. - 35 ft.</td>
<td>Open 1 restrictor opening.</td>
</tr>
<tr>
<td>36 ft. - 50 ft.</td>
<td>Open both restrictor openings.</td>
</tr>
</tbody>
</table>
C. Venting Components

CAUTION! Risk of Cuts/Abrasions/Flying Debris. Wear protective gloves and safety glasses during installation. Sheet metal edges are sharp.

The vertical vent termination system installed on this model includes:
- One length of 3-inch flexible vent pipe for exhaust air (included with vent kit).
- One length of 3-inch flexible vent pipe for combustion air (included with vent kit).
- One vertical termination cap (included with vent kit).

To prevent odors and cold air drafts, it may be necessary to place non-combustible insulation or field fabricated metal plates around the vent pipe flues as they go through the damper.

Note: The LINK-DV4-30B and LINKSQ-DV4-30 systems REQUIRE this insulation.

Figure 5.4

Masonry

LINKSQ-DV30
Installation*

Exhaust Air Vent Pipe

Termination Cap

Inlet Air Vent Pipe

Note: Untwist the pipe while extending it, to achieve full 30' length.

Factory Built
Wood Burning

LINK-DV4-30B
LINKSQ-DV4-30
Installation**

WARNING: DO NOT BLOCK THIS PIPE END!

Inlet Air Vent Pipe

Optional Link-ZC-adpb
For use with class A woodburning pipe

Remove 18 inch x 18 inch flashing on cap by removing 3 screws. Connect both the Link-ZC-ADPB to Class A Pipe and the termination cap to the LINK-ZC-ADPB with self tapping screws.

Note: Untwist the pipe while extending it, to achieve full 30' length.

OPTIONAL Link-ZC-ADPB
For use with class A woodburning pipe

LINK-DV4-30B
LINKSQ-DV4-30
Installation**

*LINK-DV30B/LINKSQ-DV30: This installation may perform better and allow less cold air infiltration in negative pressure settings.

**LINK-DV430B/LINKSQ-DV4-30:
• This installation may be more susceptible to cold air infiltration and the effects of negative pressure on the appliance’s performance.
• Depending on the chimney cleanliness, consider using the full length intake so as to lessen the possibility of sense rod contamination and flame rectification issues.
D. Connecting to SLP
Terminating horizontally is not allowed.
Vertical terminations are measured to top of chimney.

NOTE: 3 in. sections of flex pipe must be enclosed to existing masonry fireplace flue vent or installed into an existing wood burning vent system.

Four 45 degree elbows can be used in the vertical section of SLP venting to avoid structural members such as floor joist or trusses. Maximum total vent run is 50 ft. 90 degree elbows may NOT be used.

Up to four 45 degree elbows may be used as long as the minimum venting requirements are met per the above chart.

This appliance is listed for use with LINK-DV systems and components only. It is permissible to extend venting above existing chimney (within specified maximum vertical limits) using SLP series 6-5/8 inch gas direct-vent pipe. Connection is made using DV-46DVA-GK.
E. Connecting Vent Pipe

Reference instructions in the termination kit.

- Install the 3 in. flexible vent pipe(s) down through the chimney.

- Secure the exhaust flexible vent pipe to the exhaust starting collar on top of the appliance with three screws. See Figure 5.1.

For best results in cold climate be sure 3 in. flex is flush and tight to the collar slide plate assembly. Seal with stove cement or aluminum foil tape. Do not use silicone.

- Use 3 screws to attach the section of inlet air vent to the inlet air starting collar on the collar slide plate assembly. See Figure 5.1. NOTE: The collar slide plate assembly may be removed from appliance to aid installation and service.

For best results in cold climate be sure 3 in. flex is flush and tight to the collar slide plate assembly. Seal with stove cement or aluminum foil tape. Do not use silicone.

- Trim chimney top plate to minimize excess overhang or bend over flue tile. See Figure 5.6.

- Place 3/8 inch bead of 300 °F minimum continuous exposure rating silicone on flue tile top.
F. Placing, Securing and Leveling the Appliance

**WARNING! Risk of Explosion/Combustion Fumes!**
Connect vent sections per installation instructions.

- Connect exhaust vent pipe ONLY to exhaust starting collar and termination cap center collar.
- Connect inlet air vent ONLY to inlet air collar on appliance and either the termination cap inlet air collar OR terminate within chimney.
- **DO NOT** allow vent to sag below connection point to appliance.
- Install insert (without surround attached) into existing fireplace while pulling collar slide plate assembly forward.
- Install gas line into hole provided on side. See Figure 5.7.
- Secure collar slide plate assembly to appliance by securing with #8 screw. See Figure 5.1.
- Level the appliance from side to side and front to back. Adjust leveling legs to desired vertical position so appliance is level. Use the leveling bolts included with the manual bag.
- Position any excess flexible vent pipe back up into chimney without sagging. Twist and push flex vent together to shorten.
- Attach surround. Follow instructions for surround installation included with the front.
- Push insert into the opening so that it tightly overlaps the fireplace opening.

**WARNING! Risk of Fire!** Only an approved Hearth & Home Technologies surround may be used to cover integral grills on solid fuel burning fireplaces. No other components such as shrouds, sheetmetal plates, etc., may be used to seal off vents.

**WARNING! Risk of Explosion!** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

---

**Figure 5.7 Leveling Leg Detail**
### G. Installing Termination Cap

#### WARNING

**Fire Risk.**
Maintain vent clearance to combustibles as specified.
- **DO NOT** pack air space with insulation or other materials.

Failure to keep insulation or other materials away from vent pipe may cause overheating and fire.

#### CAUTION! Risk of Cuts/Abrasions/Flying Debris.
Wear protective gloves and safety glasses during installation. Sheet metal edges are sharp.

For installation of termination cap see minimum vent heights for various pitched roofs. See Figure 5.8.

* H minimum may vary depending on regional snowfall. Refer to local codes.

---

**Figure 5.8 Minimum Height from Roof to Lowest Discharge Opening**
A. General Information

**WARNING!** Risk of Shock or Explosion! **DO NOT** wire 110-120 VAC to the valve or to the appliance wall switch. Incorrect wiring will damage controls.

**NOTICE:** This appliance must be electrically wired and grounded in accordance with local codes or, in the absence of local codes, with National Electric Code ANSI/NFPA 70-latest edition or the Canadian Electric Code CSA C22.1.

- This appliance comes with a 110-120 VAC cord assembly. This is required for proper operation of the appliance (IntelliFire Ignition). An outlet box may be installed in a bottom back corner of the existing solid fuel masonry or factory built fireplace to plug in the cord assembly, or the supplied power cord may be routed out onto the hearth to a nearby outlet.
- A 110-120 VAC circuit for this product must be protected with ground-fault circuit-interrupter protection, in compliance with the applicable electrical codes, when it is installed in locations such as in bathrooms or near sinks.
- Low voltage and 110-120 VAC voltage cannot be shared within the same wall box.

**Electrical Information**

**Electrical Service and Repair**

**WARNING!** Risk of Shock! Label all wires prior to disconnection when servicing controls. Wiring errors could cause improper and dangerous operation. Verify proper operation after servicing.

**WARNING!** Risk of Shock! Replace damaged wire with type 105º C rated wire. Wire must have high temperature insulation.

- Refer to Service Parts section of appliance Owner’s Manual for replacement part information.

**B. Wiring Requirements**

**IntelliFire Ignition System Wiring**

**WARNING!** Risk of Shock or Explosion! **DO NOT** wire IPI controlled appliance power cord to a switched circuit. Incorrect wiring will override IPI safety lockout.

- Refer to Figure 6.2, IntelliFire Pilot Ignition (IPI) Wiring Diagram.
- This appliance is equipped with an IntelliFire control valve which operates on a 3 volt system.
- Ensure the 3-volt AC transformer is plugged into the supplied cord assembly to supply power to the unit OR install two D cell batteries (not included) into the battery pack before use.

**ON/OFF Switch**

- An ON/OFF switch is included with the appliance surround and should be attached to the side of the surround. (See Installation instructions shipped with the appliance front).
- If desired an additional wall switch or thermostat may be added to system.

---

**Accessories Requirements**

- This appliance may be used with a wall switch, wall mounted thermostat and/or a remote control.

Wiring for optional Hearth & Home Technologies approved accessories should be done now to avoid reconstruction. Follow instructions that come with those accessories.

**NOTICE: DO NOT** wire 110-120 VAC to wall switch.

---

**Appliance Cord Length (approximate)**

</tr>
</tbody>
</table>

---

**Figure 6.1 Electrical Outlet Detail**

---

**Majestic • JASPER30IN Installation Manual • 2546-980 Rev. i • 4/20**
**Battery Pack**

Battery pack is not factory installed in appliances. See appliance manual bag for battery pack. Battery pack may be installed without batteries during normal operation. See Figure 6.3 for battery pack location.

- When operating appliance under battery power, battery pack **MUST** be moved outside of the appliance.

**NOTICE:** Batteries should only be used as a power source in the event of an emergency power outage. Batteries should not be used as a primary long-term power source. Battery polarity must be correct when installing batteries.

DO not store batteries in the battery pack when the appliance is powered by the 3-volt transformer connected to permanent electrical service. Store battery pack in appliance manual bag when not in use.

---

**Figure 6.2 Intellifire Pilot Ignition (IPI) Wiring Diagram**

**Figure 6.3 Battery Pack Installed**
C. Installation / Service for Optional Fan

On units already installed, removal of decorative front and gas insert may be required.

Option 1:
- Detach flexible liner from top of unit if insert is installed by removing the collar slide plate screw. See Figure 5.1.
- Remove the five screws on the rear cover plate. See Figure 6.4.
- Install and wire the fan per instruction shipped with the fan. Figures 6.6 and 6.7 also shows additional details.
- Reinstall the rear cover plate back on the unit.
- Reattach flexible liner and replace collar slide plate screw. See Figure 5.1.

Option 2:
- Remove appliance front, glass, logs, base pan assembly, burner assembly and valve plate assembly. See Figure 6.5.
- Install and wire the fan per instruction shipped with the fan. Figures 6.6 and 6.7 also shows additional details.
- Reinstall valve plate assembly, burner assembly, base pan assembly, logs and appliance glass and front.

Figure 6.4 Cover Plate Removed (Option 1)

Figure 6.5 Through Valve Plate Opening (Option 2)
Optional Fan (GFK-160A)

Install fan as shown below.

Figure 6.6 Install Temperature Sensor

Figure 6.7 Fan Wiring Diagram
A. Fuel Conversion

- Make sure the appliance is compatible with available gas types.
- Conversions must be made by a qualified service technician using Hearth & Home Technologies specified and approved parts.
- Reference the following diagrams for gas shut off detail and component access.
- Reference Section 9.A to remove fixed glass assembly.

![Figure 7.1 Gas Shut-off](image)

- Use multi-purpose tool to assist with gas shutoff. See Figure 7.1. The gas ball valve is in the “OFF” position from manufacturer.
- Glass clip assemblies can be removed for additional component accessibility.

![Figure 7.2 Glass Clip Assembly Removal](image)

**WARNING!** Glass seal plate must be properly installed. Risk of elevated component temps and carbon monoxide exposure.

**CAUTION:** Be sure to reinstall the component heat shield before firing the appliance. Components will overheat without heat shield.

**CAUTION:** Any wires removed from the wire clips during appliance installation or service must be re-installed in the wire clips.
B. Gas Pressure

- Optimum appliance performance requires proper input pressures.
- Gas line sizing requirements will be determined in ANSI Z223.1 National Fuel Gas Code in the USA and CAN/CGA B149 in Canada.
- Pressure requirements are:

<table>
<thead>
<tr>
<th></th>
<th>Natural Gas</th>
<th>Propane</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum inlet pressure</td>
<td>5.0 in. w.c.</td>
<td>11.0 in. w.c.</td>
</tr>
<tr>
<td>Maximum inlet pressure</td>
<td>10.0 in. w.c.</td>
<td>13.0 in. w.c.</td>
</tr>
<tr>
<td>Manifold pressure</td>
<td>3.5 in. w.c.</td>
<td>10.0 in. w.c.</td>
</tr>
</tbody>
</table>

**WARNING! Risk of Fire or Explosion!** High pressure will damage valve. Low pressure may cause explosion.

- Verify inlet pressures. Verify minimum pressures when other household gas appliances are operating.
- Install regulator upstream of valve if line pressure is greater than 1/2 psig.

**Note:** Have the gas supply line installed in accordance with local codes, if any. If not, follow ANSI Z223.1. Installation should be done by a qualified installer approved and/or licensed as required by the locality. (In the Commonwealth of Massachusetts installation must be performed by a licensed plumber or gas fitter).

- If substituting for these components, please consult local codes for compliance.

C. Gas Connection

- Refer to Reference Section 3 for location of gas line access in appliance.
- The gap between supply piping and gas access hole may be caulked with caulk with a minimum of 300 °F continuous exposure rating or stuffed with non-combustible, unfaced insulation to prevent cold air infiltration.
- Ensure that gas line does not come in contact with outer wrap of the appliance. Follow local codes.
- Pipe incoming gas line to the factory supplied flex line. See Figure 7.4.
- Connect incoming gas line to the 1/2 in. (13 mm) connection on manual shutoff valve.

**WARNING! Risk of Fire or Explosion!** Support control when attaching pipe to prevent bending gas line.
- A small amount of air will be in the gas supply lines.

**WARNING! Risk of Fire or Explosion!** Gas build-up during line purge could ignite.

- Purge should be performed by qualified service technician.
- Ensure adequate ventilation.
- Ensure there are no ignition sources such as sparks or open flames.

Light the appliance. It will take a short time for air to purge from lines. When purging is complete the appliance will light and operate normally.

**WARNING! Risk of Fire, Explosion or Asphyxiation!** Check all fittings and connections with a non-corrosive commercially available leak-check solution. **DO NOT** use open flame. Fittings and connections could have loosened during shipping and handling.

**WARNING! Risk of Fire! DO NOT** change valve settings. This valve has been preset at the factory.
D. High Altitude Installations

**NOTICE:** If the heating value of the gas has been reduced, these rules do not apply. Check with your local gas utility or authorities having jurisdiction.

When installing above 2000 feet elevation:

- In the USA: Reduce input rate 4% for each 1000 feet above 2000 feet.
- In CANADA: Input ratings are certified without a reduction of input rate for elevations up to 4500 feet (1370 m) above sea level. Please consult provincial and/or local authorities having jurisdiction for installations at elevations above 4500 feet (1370 m)

Check with your local gas utility to determine proper orifice size.

E. Air Shutter Setting

Air shutter settings should be adjusted by a qualified service technician at the time of installation. The air shutter is set at the factory for minimum vertical vent run. Adjusting air shutter may be desired for longer vent runs. See Figure 7.5.

**NOTICE:** If sooting occurs, provide more air by opening the air shutter.

<table>

F. Service / Replace Appliance Gas Valve

- See Figure 7.6.
- Remove appliance front, glass, logs, base pan assembly, burner assembly and valve plate assembly. See Figure 7.6.
- Service/Replace gas valve.
- Reinstall valve plate assembly, burner assembly, base pan assembly, logs and appliance glass and front.

![Figure 7.5 Air Shutter](image)

**Air Shutter Settings**

![Figure 7.6 Gas Valve Detail](image)
A. Mantel, Wall Projections & Hearth Extensions

**WARNING! Risk of Fire!** Comply with all minimum clearances to combustibles as specified. Framing or finishing material closer than the minimums listed must be constructed entirely of noncombustible materials (i.e., steel studs, concrete board, etc).

Clearance to combustible material under the insert is 1/4 inch (6 mm).

- Use leveling legs to raise insert minimum 1/4 inch (6 mm) above combustible material or outer wrap of factory built firebox.

Combustible facings must not extend behind the insert surround. For non-combustible material specifications refer to Section 1.E and 1.F.

**Mantel Legs or Wall Projections**

---

**Mantels or Wall Projections - Non-Combustible**

![Diagram of Mantel Legs or Wall Projections - Non-Combustible]

**Note:** Measurement is taken from top of the surround opening.

---

**Note:** All numbers in Tables 1 and 2 include the 1/4 in. gap on surround edge.
B. Hearth Extension

• All flooring and hearth material must remain below the bottom of the surround. See Figure 8.5.
• Combustible flooring may be located in front of the appliance. Exception - no vinyl / adhesive flooring. See Figure 8.6.
• 1/2 inch gap under the bottom of the front must be maintained. See Figure 8.4.
• A minimum 1/4 inch gap from the bottom of the appliance to the metal floor of the solid fuel firebox is REQUIRED. See side view in Figure 8.7.
• Combustible flooring underneath the appliance is acceptable with a 1/4 inch gap. See Figure 8.7.

Appliance Setup

A. Fixed Glass Assembly

**WARNING! Risk of Asphyxiation!** Handle fixed glass assembly with care. Inspect the gasket to ensure it is undamaged and inspect the glass for cracks, chips or scratches.

- **DO NOT** strike, slam or scratch glass.
- **DO NOT** operate fireplace with glass removed, cracked, broken or scratched.
- Replace as a complete assembly.

Removing Fixed Glass Assembly

**CAUTION!** Handle fixed glass assembly with care. Glass is breakable.

- Avoid striking, scratching or slamming glass
- Avoid abrasive cleaners
- **DO NOT** clean glass while it is hot

- The glass assembly fastens to the fireplace in four places. Four of the fastening mechanisms are spring-loaded glass latches. An example of the glass latch is shown in Figure 9.2.

- To release glass assembly, use the supplied multi-purpose tool to pull the two bottom spring-loaded latches forward and allow them to retract away from the glass assembly. Tilt the bottom of the glass assembly outward until the top latches disengage.

Replacing Fixed Glass Assembly

- Tilt the top of the glass assembly toward fireplace and slide glass assembly upward to engage top latches. Verify top latches are fully engaged and then fasten the two bottom latches using the supplied multi-purpose tool.

- Reinstall door or decorative front.

---

**GLASS CLIPS**

![Figure 9.1 Multi-Purpose Tool](image)

**GLASS SEAL PLATE**

![Figure 9.2 Glass Seal Plate](image)

---

**WARNING!** Glass seal plate must be properly installed. Risk of elevated component temps and carbon monoxide exposure.

**Note:** Appliance is shipped with glass seal plate in the installed position.
B. Remove the Shipping Materials
Remove shipping materials from inside or underneath the firebox.

Note: Remove the zip ties from the appliance that hold the electrical cord, gas flexline and multi-purpose tool in place for shipping.

C. Clean the Appliance
Clean/vacuum any sawdust that may have accumulated inside the firebox or underneath in the control cavity.

D. Accessories
Install approved accessories per instructions included with accessories. Contact your dealer for a list of approved accessories.

WARNING! Risk of Fire and Electric Shock! Use ONLY Hearth & Home Technologies-approved optional accessories with this appliance. Using non-listed accessories could result in a safety hazard and will void the warranty.
E. Place the Lava Rock

**WARNING! Risk of Explosion!** Follow lava rock placement instructions in manual. **DO NOT** place lava rock on burner. Improperly placed lava rock interferes with proper burner operation.

Lava rock is shipped with this gas appliance. To place the lava rock:

- Lava rock CANNOT be placed on the burner.
- Place lava rock in front of and to the sides of the burner. See Figure 9.3.

F. Ember Placement

**WARNING! Risk of Explosion!** Follow ember placement instructions in manual. Replace ember material annually. Improperly placed embers interfere with proper burner operation.

Ember material is shipped with this gas appliance. To place the ember material:

- Embers CANNOT be placed directly over burner ports that are indicated in Figure 9.3 or in pilot area as indicated in Figure 9.3.
- Embers may be placed on the ports in areas indicated in Figure 9.3. These embers must be placed loosely over the port holes, not pressed down on or into the holes. Create a single layer, no more than 1/4 inch thick.
- Failure to follow this procedure will likely cause lighting and sooting problems.
- Save the remaining ember materials for use during appliance servicing. The embers provided should be enough for 3 to 5 applications.
G. Install the Log Assembly

Log Set Assembly: LOGS-2546  
Models: JASPER30IN

LOG PLACEMENT INSTRUCTIONS

CAUTION! Risk of Cuts or Abrasions. Wear protective gloves and safety glasses during installation.

CAUTION: Logs are fragile, handle with care.

NOTICE: To simplify the installation process, positively identify each individual log before beginning installation.

Lava Rock: The JASPER30IN comes standard with lava rock. Refer to the appliance installation manual for instructions on how to properly install the lava rock in the appliance.

LOG #1: Locate the cutout of Log #1 and place over the pilot hood. Make sure log is pushed tightly against the air scoop. See Figure 3.

LOG #2: With the burnout area of Log #2 facing out, locate shoulder screws B and C on the basepan in Figure 2 and place log behind them. Slide log left until it contacts shoulder screw A. Log #2 should be contacting all three shoulder screws A, B, & C. See Figure 4.

<table>
<thead>
<tr>
<th>JASPER30IN SRV LOGS</th>
</tr>

</tr>
</tbody>
</table>
**LOG #3:** With the burnout area of Log #3 facing out, locate the shoulder screws F and H on the basepan in Figure 2 and place log behind them. Slide log right until it contacts shoulder screw I. Log #3 will contact all three shoulder screws, F, H and I. See Figure 5.

**LOG #4:** With the burnout area of Log #4 facing right, place log on flat spot of Log #1 and Log #2. Slide Log #4 back until it contacts back of firebox. See Figure 6.

**LOG #5:** With the burnout area of Log #5 facing right, place the larger end of the log between shoulder screws D and E indicated in Figure 7. Lean Log #5 between Log #2 and Log #3 so that it rests on the flat spot of Log #1. See Figure 7.

**LOG #6:** Locate the larger end of Log #6 and rest it on the flat spot of Log #3. Lean the other end of Log #6 back so that it rests on the flat spot of Log #1. See Figure 8.
H. Install Decorative Front and Surround

A decorative front and surround is required to complete this installation. Installation instructions are included with the decorative front and surround. Consult your dealer for a list of decorative front and surround options.

**WARNING! Risk of Fire!** Install ONLY doors or fronts approved by Hearth & Home Technologies. Unapproved doors or fronts may cause fireplace to overheat.

*This fireplace has been supplied with an integral barrier to prevent direct contact with the fixed glass panel. DO NOT operate the fireplace with the barrier removed.*

Contact your dealer or Hearth & Home Technologies if the barrier is not present or help is needed to properly install one.

For more information refer to the instructions supplied with your decorative front.

See Figure 9.4 for ON-OFF Switch Detail. The ON-OFF Switch included with the surround needs to be wired to the appliance. Reference front/surround instructions (included with the decorative front) and wiring diagram in Figure 6.2.

**NOTE:** For on site custom surround details, see instructions included with the surround.

---

**NOTICE:** 1/2 inch gap must be maintained or components will overheat.

---

Figure 9.4 Surround ON/OFF Switch

Figure 9.5 Required 1/2 in. Gap
10 Reference Materials

A. Vent Components

Direct Vent Flex Liner Kits (see Figure 10.1)
LINK-DV30B: Masonry 3 inch flex liner kit. Expands to 30 feet. Includes: two liners, termination cap and flashing.
LINK-DV4-30B: Masonry 3 inch flex liner kit. Expands to 30 feet and 4 feet respectively. Includes: two liners, termination cap and flashing.
LINKSQC-DV30, LINKSQB-DV30: Masonry 3 inch flex liner kit. Expands to 30 feet. Includes: two liners, termination cap and flashing.
LINKSQC-DV4-30, LINKSQB-DV4-30: Masonry 3 inch flex liner kit. Expands to 30 feet and 4 feet respectively. Includes: two liners, termination cap and flashing.

Direct Vent Flex Liner Accessory Kits. See Figure 10.2.
LINK-ZC-ADPB: Zero clearance chimney adapter
DV-46DVA-GK: Adapter kit - It is permissible to use DV-46DVA-GK to connect colinear flex vent to SLP vent pipe to extend the run.
FLEX3-30: One 3 inch flexible liner expands to 30 feet.
FLEX-CNCT: Connector kit - 3 inch liner to 3 inch liner, one connector per kit.

Figure 10.1 Direct Vent Flex Liner Kits

Reference price book for SLP components.

Note: No Horizontal Termination allowed.
B. Accessories
Install approved accessories per instructions included with accessories. Contact your dealer for a list of approved accessories.

**WARNING! Risk of Fire and Electric Shock!** Use ONLY Hearth & Home Technologies-approved optional accessories with this appliance. Using non-listed accessories could result in a safety hazard and will void the warranty.

Remote Controls, Wall Controls and Wall Switches
Follow the instructions supplied with the control installed to operate your fireplace:

For safety:
- Install a switch lock or a wall/remote control with child protection lockout feature.
- Keep remote controls out of reach of children.

See your dealer if you have questions.

Optional Fan
If desired, a fan may be added. Contact your dealer to order the correct fan. Follow instructions supplied with the fan to install your fan. See your dealer if you have questions.

Optional Refractory
If desired, a refractory kit may be added. Contact your dealer to order the correct refractory kit. Follow instructions supplied with the refractory kit to install your refractory. See your dealer if you have questions.
