1. Introduction

The IntelliFire app is designed to communicate with the Wi-Fi Module (IFT-WFM) installed on the Hearth & Home Technologies appliance using an Android or iOS device. The IntelliFire app allows the ability to control many of the available features on the appliance. Also the IntelliFire skill on Amazon Alexa or Google Assistant allows you to turn on and off your appliance.

Note: The IntelliFire Wi-Fi module supports 2.4GHz or 2.4GHz / 5GHz dual band Wi-Fi networks only. To check your network frequency, refer to your wireless router manual or contact your internet service provider.

Precautions / Preparation

The location of the IntelliFire Wi-Fi module to the Wi-Fi router or network extender should be less than 50 feet.

Before you begin, verify you have:

- Wi-Fi module SSN #
- Wi-Fi Name and Password
  
  Note: The Wi-Fi module will not work if there is an apostrophe (') in the network name.
- Define Appliance Location (such as: Home, Cabin, etc).
- Define Appliance Name (such as: living room fireplace, family room fireplace, etc).
  
  Note: It is important that the appliance name is unique and can be distinguishable if using a smart speaker.
2. Quick Start Guide

1. Get the IntelliFire App
   Create a new IntelliFire account, and log in.

2. Connect your Fireplace
   Follow the onscreen prompts to add your location and connect to the IntelliFire_XXXX network via Wi-Fi.
   An audible beep will confirm you have connected to the device.

3. Connect your Wi-Fi
   Following the prompts, connect your home Wi-Fi network and name the appliance.
   A second audible beep confirms your fireplace is connected to your home network.

4. Connect Smart Speakers
   **Google Home**
   1. Open the Google Home app, press add, and the set-up device.
   2. Search for IntelliFire and then press on ‘have something already set up’.
   3. You will be asked to enter your IntelliFire app email and password to complete the set up.

   **Amazon Alexa**
   1. Open the Amazon Alexa app; under Skills & Games search for ‘IntelliFire’.
   2. Select IntelliFire and press enable to use.
   3. You will be asked to enter your IntelliFire app email and password to complete the set up.
3. Download the IntelliFire App

1. Go to the iOS App Store or Google Play Store on your smart device and search for “IntelliFire”. Download and follow the directions to create an account.

**NOTE: IF YOU ARE USING AN ANDROID DEVICE, SKIP TO SECTION 6.**

4. Set-up Instructions for iOS

**Note:** Verify Wi-Fi module is installed in the appliance. You will see in your network settings an IntelliFire access point. See Figure 5.

**Note:** The IntelliFire Wi-Fi module supports 2.4GHz or 2.4GHz / 5GHz dual band Wi-Fi networks only. To check your network frequency, refer to your wireless router manual or contact your internet service provider.

1. Log into your IntelliFire account and then press the ‘+’ icon to add a location shown in Figure 2.
2. Wait 5 seconds and it will redirect to network settings and take you to Step 3.

3. Go to your Wi-Fi settings and look for the IntelliFire network. If more than one IntelliFire network is shown, select the network with Wi-Fi SSN that matches this appliance location. See Figure 4.

**Note:** You do not need to wait for the spinning wheel to stop or a check mark to display next to the IntelliFire network to return to the IntelliFire app.

**Note:** If you do not see an IntelliFire network, your Wi-Fi module will need to be reset. Follow the instructions in the troubleshooting guide, “I do not see the IntelliFire network.”
4. Return to the IntelliFire app. Press next and a ‘Success!’ screen will appear. See Figure 5. Press continue.

Note: If the success screen does not appear, wait five seconds, return to the Locations screen (using the back arrow in the upper left corner of the display) and repeat steps 1 – 4.

5. Select the location for your new appliance. To add to a current location, select that location and press continue.
   - To add a new location, select add new location to get to the new location entry screen.
   - If this is your first appliance you will already be at the new location entry screen.
   - Enter the location name of the appliance (ex. home, cabin, garage).
   - Enter the postal code of the location. The postal code is used to display outside air temperature within the app.
   - Press “Add New Location” to confirm. See Figure 6.
6. Select your home Wi-Fi network

**Note:** You must select a 2.4GHz or 2.4GHz / 5GHz dual band Wi-Fi network. The app does not work on the 5GHz networks.

**Note:** If you receive an error message stating ‘Error: There was an error communicating with your appliance. Verify you are connected to the appliance’s Wi-Fi network and try again’ and HAVE NOT selected the Wi-Fi network yet, press ‘Okay’ and the network list will be displayed.

Carefully enter your network password in the space provided. Once you have entered your password, select Next, and you will hear the first audible beep. See Figure 7.

If you do not have password protection on your home network, select Next, and you will hear the first audible beep. See Figure 8.

**NOTICE!**: Entering an invalid network password will cause the App to display ‘Error: There was an error communicating with the appliance. Verify you are connected to the appliance’s Wi-Fi network and try again’. If this error occurs, refer to the Troubleshooting Section 13 for specific steps to restart installation.

7. This pop-up screen is to inform you that the router is connecting to the server. You will hear a second beep and the progress bar completes. Press “Next” button. See Figure 8.

![Figure 7 Select Wi-Fi Network](image1)

![Figure 8 Synchronizing](image2)
8. Type in the name of your appliance. Chose a simple name that is convenient and easy to recognize (ex: Living Room Fireplace).

   **Note:** If you are going to connect with a Google or Alexa Smart speaker this will be the name that you use to control the appliance. Example: Alexa / Google turn on ‘living room fireplace’.

   - Press Next. See Figure 9.

9. Select the Brand of the appliance. See Figure 10.

10. After you select brand and Step 10 is complete, the app will return you to your settings. Go to your Wi-Fi settings and reconnect your smart device to your home Wi-Fi network.

   **Figure 9 Name Appliance**
   
   Do not select a brand until you have heard a second beep, if you do not hear the second beep, refer to the troubleshooting guide “Did not hear the second beep during setup”
11. Return to the IntelliFire app. See Figure 12.
    - Press 'Next'.

12. You will see a connection confirmation screen.
    See Figure 13.
    - Press 'Next'.

13. You can now run your appliance via your app, you will see your location. Touch Arrow next to current location to open the main app operation screen. See Figure 14.
5. iOS User Guide

IntelliFire® App - iOS
User Guide

Introduction
This user guide serves as a quick reference to the IntelliFire app.

MAIN SCREEN - iOS

This is your main screen. An outside air temperature will be displayed at the top of your screen. This temperature reflects the postal code entered during set up.

This main screen also provides:
1. Location and name of the appliance controlled by this device.
2. Status of the Flame function. If flame function is ON, then the flame level will be displayed.

Figure 1  Main Screen

FUNCTIONS - iOS

Flame

Turn Flame On/Off
Move the slider switch to the right to turn ON the Flame, to the left to turn OFF the flame. When the flame is ON the slider switch color will change.

Flame Height

You can set the flame height with the (+) / (-) buttons for your desired flame height level to affect the ambiance and control the heat output. Each press of the button will change the flame height one level.

Your appliance will remember the previous flame height setting and adjust the flame to that level 10 seconds after turning the flame on. Each level will take 4 seconds to transition.

Note: It is recommended to allow four seconds between each command to change the flame height. If the flame height adjustments are made too quickly, the app display may not accurately display flame height status.

Figure 2  Flame
Temperature

If this appliance location is equipped with an IFT-RC150 and/or IFT-RC400 remote, you can set and maintain your desired room temperature with the thermostat function. This function automatically adjusts your appliance to maintain the desired set temperature.

**Note:** The RC150 or RC400 is required for thermostat function. These remote controls are each equipped with a sensor that measures temperature. Locate the remote control in a location within the room that provides desired flame height response and fireplace affect on temperature.

On/Off

This function is to turn your appliance thermostat ON or OFF.

Temperature Adjustment

When the Temperature function is turned ON, the rotary icon will activate for room temperature adjustment. Rotate the temperature adjustment to the desired room temperature.

**Note:** The temperature display may deviate +/- up to 2 degrees F from what was set.

Timer

A timer can be set to automatically turn off the appliance after a set time, up to 2 hours and 59 minutes. Turn the flame on prior to setting the timer. The timer will turn the flame off automatically after the selected preset amount of time. See Figure 4.

To use the timer function, press ‘Timer’ icon on the main screen. Select desired time by using scrolling ‘H’ (Hour) and ‘M’ (Minute), then press the arrow icon to turn ON. To turn the timer off, select timer from main screen and press the ‘X’ icon to turn OFF.

**Note:** The timer display does not count down on the app. The countdown is controlled by the IFT-ECM control module in the appliance.

Figure 3 Temperature

Figure 4 Timer

Note: The timer display does not count down on the app. The countdown is controlled by the IFT-ECM control module in the appliance.
Other
This screen allows the operation of paired accessories such as a fan or light and activate the Cold Climate mode. See Figure 5.
This appliance defaults to the previous settings, when activated.

Fan
The fan will only appear if the feature is available on your appliance. Your appliance has a built-in delay that prevents the fan from operating within the first three minutes of operation. This allows the air to be heated to a comfortable temperature before the fan circulates it. Adjust the fan speed using the slider bar on app screen. There are four levels for fan speed.
- The fan will always start on Level 4 for the first ten seconds, then automatically adjust to the speed selected on the app.
- The fan will automatically run for 12 minutes after the flame is turned OFF. This feature is intended to transfer residual heat from the appliance.

Power Vent
If the appliance was installed with a Power Vent, a two minute pre-purge is required between the ON command and the flame ignition. The app may display a pop-up message to confirm that Power Vent is in pre-purge mode.

Cold Climate
This function turns on a small continuous pilot flame and keeps the air inside your appliance warm while not in use. It is a useful feature in colder weather to minimize condensation on the appliance glass.

Note: This feature is not available if a Power Vent or Smart Wall is installed on the appliance.

Note: The Cold Climate function will automatically turn OFF after 166 hours if appliance is not actively used. If Flame ON is activated before 166 hours, the cold climate timer will reset.

Lights
The lights will only appear if that feature is available on your appliance. Adjust the lights in the appliance using the slider bar on app screen. There are three light levels.
1. On the LOCATIONS screen, you can access the settings of the IntelliFire app by pressing on the icon in the upper left-hand corner. See Figure 6.

![Figure 6 Locations]

2. On the settings screen, you will see the app version. You will see contact us for any support needed, change password, F or C preferred units and the option to sign out of the app. See Figure 7.

![Figure 7 Settings]
1. To edit your location(s), press on the lower left hand corner edit icon. See Figure 8.

![Figure 8 Edit Locations Access](image1)

2. Select the location you would like to edit and press the edit icon to the right of the name. See Figure 9.

![Figure 9 Edit Locations](image2)

3. You can change the appliance name, zip code or delete the location all together. Note: if you delete the location, it will also delete all of your appliances in that location. See Figure 10.

**Note:** If you delete your location, you will need to reset all the Wi-Fi modules at that location and re-setup the appliances.

![Figure 10 Edit Location Information](image3)

4. In your location screen, you can also add locations. For example if you have a main home and a vacation home, you can have both locations on the same app. You just need to press the lower right-hand ‘+’ icon and then follow the same setup process. See Figure 11.

**Note:** You must be on your new appliance location Wi-Fi network to set up the new location.

![Figure 11 Add Locations](image4)
EDIT / ADD APPLIANCES - iOS

1. On the Appliances screen, to edit your appliance(s) press on the lower left corner edit icon. See Figure 12.

2. Press on the edit icon to the right of the appliance name you would like to edit. See Figure 13.

3. Change the name, brand, or delete the appliance. See Figure 14.

4. If you want to add an appliance in a location, press the ‘+’ icon in the lower right-hand corner and use the same process as your initial appliance setup found in section 4 of the installation guide. See Figure 15.
You can add other users to operate your appliance. The secondary users can:

- Turn the appliance on and off
- Operate the timer
- Operate the thermostat
- Operate the fan and lights (if included in your appliance)

Secondary users cannot:

- Add, delete or edit appliances
- Add, delete or edit locations

1. To add another user, the new user must first download the IntelliFire app from the App Store and create their own account.

2. On the appliance screen of the primary user, press on the person icon in the upper right-hand corner. See Figure 16.

3. This screen will allow you to add or delete users
   - To add a user, press on the ‘+’ icon in the lower right-hand corner. See Figure 17.
   - Input an email address of the user you would like to add and press save. See Figure 18. This will give them access to run your appliances. They will receive an email to either log in or sign up for the IntelliFire app. Once the new user is logged into the app, your appliance will appear in their app and they will have access to run the appliance.
   - In your user setup screen, the new user will be listed.
   - If you want to remove a user, press on the edit icon next to their name and you can delete the user. See Figure 17 and 19.
6. Set-up Instructions for Android

**Note:** Set up images may vary depending on Android device and operating system.

**Note:** Verify Wi-Fi module is installed in the appliance. You will see in your network settings an IntelliFire access point. See Figure 6.

**Note:** The IntelliFire Wi-Fi module supports 2.4GHz or 2.4GHz / 5GHz dual band Wi-Fi networks only. To check your network frequency, refer to your wireless router manual or contact your internet service provider.

1. During installation some Android versions requires access to the device location in order to automatically make the connection to the Wi-Fi module. Select either of the options that allow location access. See Figure 1.

2. Go to your Wi-Fi settings and look for the IntelliFire network. If more than one IntelliFire network is shown, select the network with Wi-Fi SSN that matches this appliance location. See Figure 2.

**Note:** You do not need to wait for the spinning wheel to stop or a check mark to display next to the IntelliFire network to return to the IntelliFire app.

3. After a successful login, the following screen appears. See Figure 3. Press Continue.

![Figure 1 Android Permission Screen](image1.png)

![Figure 2 Wi-Fi Network with IntelliFire Access Point](image2.png)

![Figure 3 Successful Login](image3.png)
4. The following screen appears which shows that the appliance Wi-Fi module has been detected. Press Connect. See Figure 4.

5. The app will now connect to your appliance Wi-Fi module, as shown in Figure 5. The first few numbers/letters shown after ‘connected to appliance’ should match the Wi-Fi SSN on the attached Wi-Fi module. Press Continue.

6. Select the location for your new appliance.
To add to a current location, select that location and press continue.
- To add a new location, select add new location to get to the new location entry screen.
- If this is your first appliance you will already be at the new location entry screen.
- Enter the location name of the appliance (ex. home, cabin, garage).
- Enter in the zip code of the location. The post code is used to display outside air temperature within the app.
- Press Continue. See Figure 6.
7. The app will now ask which Wi-Fi network it should use to connect to the appliance Wi-Fi module. Select the correct network and press continue. If you do not see your home network, press refresh. See Figure 7.

**Note:** The next two screens will only appear the first time you setup an appliance in this location. The app will remember the Wi-Fi network information for other fireplaces at this location.

8. Carefully enter your network password in the space provided. Once you have entered your password, select Continue, and you should hear the first audible beep. See Figure 8.

If you do not have password protection on your home network, check box for ‘This Wi-Fi has no password’ and select Continue, and you should hear the first audible beep. See Figure 8.

**NOTICE!** Entering an invalid network password will cause the App to display ‘Error: There was an error communicating with the appliance. Verify you are connected to the appliance’s Wi-Fi network and try again’. If this Error occurs, refer to the Troubleshooting section 13 for specific steps to restart installation.

---

**Figure 7 Wi-Fi Network**

**Figure 8 Wi-Fi Password**
9. Next, the user will be prompted to enter a name for the appliance, such as ‘living room’, ‘fireplace 1’, etc. After another beep from the ECM, Press Continue. See Figure 9.

![Figure 9 Name the Appliance](image)

10. Next the user will be prompted to select the brand of the appliance being setup. Select and press Continue. See Figure 10.

![Figure 10 Brand Selection](image)

11. The system will complete the setup process and display the following screen if successful. See Figure 11.

**Note:** Do not select a brand until you have heard a second beep. If you do not hear the second beep, refer to the troubleshooting guide, “Did not hear a second beep”
Introduction
This user guide serves as a quick reference to the IntelliFire app.

MAIN SCREEN - ANDROID
This is your main appliance screen. See Figure 1.

FLAME
You can set your desired flame height level to affect the ambiance and control the heat output.

Your appliance will remember the previous flame height setting and adjust the flame to that level 10 seconds after turning the flame on. Each level will take 4 seconds to transition.

Note: It is recommended to allow four seconds between each command to change the flame height. If the flame height adjustments are made too quickly, the app display may not accurately display flame height status.

FUNCTIONS - ANDROID
Flame
Turn Flame On/Off
This function is to turn ON or OFF your appliance. See Figure 2.

Flame Height
You can set your desired flame height level to affect the ambiance and control the heat output.

Your appliance will remember the previous flame height setting and adjust the flame to that level 10 seconds after turning the flame on. Each level will take 4 seconds to transition.

Note: It is recommended to allow four seconds between each command to change the flame height. If the flame height adjustments are made too quickly, the app display may not accurately display flame height status.
Functions - Android

Thermostat
You can set and maintain your desired room temperature with the thermostat function. This function automatically adjusts your appliance to maintain the desired set temperature. The RC150 or RC400 is required for thermostat use and is used to measure the temperature of the room. See Figure 3.

Note: The RC150 or RC400 is required for thermostat function. These remote controls are each equipped with a sensor that measures temperature. Locate the remote control in a location within the room that provides desired flame height response and fireplace affect on temperature.

On/Off
This function is to turn your appliance thermostat ON or OFF.

Temperature Adjustment
Rotate the temperature adjustment to set the appliance to the desired temperature.

Timer
A timer can be set to automatically turn off the appliance after a set time, up to 2 hours and 59 minutes. Turn the flame on prior to setting the timer. The timer will turn the flame off automatically after the selected preset amount of time. See Figure 4.

To use the timer function, press ‘Timer’ icon on the main screen. Select desired time by using scrolling ‘H’ (Hour) and ‘M’ (Minute), then move the slider switch to ‘ON’. To turn the timer off, move the slider switch to ‘OFF’.

Note: The temperature may adjust +/- 1 to 2 degrees on the display from what was set.

Figure 3  Temperature

Figure 4  Timer

Note: The timer display will count down in the app. The countdown is controlled by the IFT-ECM control module in the appliance.
Other

This screen allows the operation of paired accessories such as a fan or light and the Cold Climate mode. See Figure 5.

This appliance defaults to the previous settings, when the flame is turned back on.

![ BRAND NAME ]

**Lights**

The lights will only appear if that feature is available on your appliance. Adjust the lights in the appliance using the slider bar on app screen. There are 3 light levels. See Figure 5.

**Fan**

The fan will only appear if the feature is available on your appliance. Your appliance has a built-in delay that prevents the fan from operating within the first 3 minutes of operation. This allows the air to be heated to a comfortable temperature before the fan circulates it. Adjust the fan speed using the slider bar on app screen. There are 4 levels for fan speed. See Figure 5.

- The fan will always start on Level 4 for the first ten seconds, then automatically adjust to the speed selected on the app.
- The fan will automatically run for 12 minutes after the flame is turned OFF. This feature is intended to transfer residual heat from the appliance.

**Power Vent**

If the appliance was installed with a Power Vent, a two minute pre-purge is required between the ON command and the flame ignition. The app will display a pop-up message to confirm that Power Vent is in pre-purge mode.

**Cold Climate**

This function turns on a small pilot flame and keeps the air inside your appliance warm while not in use. It is a useful feature in colder weather to minimize condensation on the appliance glass. See Figure 5.

**Note:** This feature is not available if a Power Vent or Smart Wall is installed on the appliance.

**Note:** The continuous pilot will automatically turn OFF after 166 hours if appliance is not actively used. If Flame ON is activated before 166 hours, the automatic timer will reset.

Figure 5  Functions
SETTINGS - ANDROID

1. On the LOCATIONS screen, you can access the settings of the IntelliFire app by pressing on the icon in the upper left-hand corner. See Figure 6.

2. On the settings screen, you will see the app version, temperature units, add appliance, change password, contact us, and sign out. See Figure 7.

EDIT / ADD LOCATIONS - ANDROID

1. On the second locations screen, press on the setting icon in the upper right-hand corner. See Figure 8.

2. On this locations screen you can change location name, zip code, and manage users. See Figure 9.
EDIT / ADD LOCATIONS - ANDROID

3. To edit your location, press on the settings icon in the upper right-hand corner. Here you will be able to edit your location name, zip code, manage users, or delete the location all together. See Figure 10.

4. To add a location, press on the ‘+’ icon in the lower right hand and follow the set up steps in Section 6. See Figure 11.

EDIT / ADD APPLIANCES - ANDROID

1. To edit your appliance(s) press on the settings icon in the upper right corner. See Figure 12.

2. From the edit appliance screen you can:
   - Change the name of the appliance - Press the edit icon next to the appliance to change the appliance name.
   - Change Brand - Change brand of the appliance.
   - Delete the appliance.

Figure 10 Edit Location

Figure 11 Add Location

Figure 12 Appliance Settings

Figure 13 Edit Appliance
USER MANAGEMENT - ANDROID

You can add other users to operate your appliance. The secondary users can:

- Turn the appliance on and off
- Operate the timer
- Operate the thermostat
- Operate the fan and lights (if included in your appliance)

Secondary users cannot:

- Add, delete or edit appliances
- Add, delete or edit locations

1. To add another user, the new user must first download the IntelliFire app from the Google Play Store and create their own account.

2. In the locations screen, press the arrow to the right of the outside temperature for your location. See Figure 14.

3. Select the settings icon in the upper right corner. See Figure 15.

Figure 14 Edit Users

Figure 15 Settings Icon
4. This screen allows you to add/delete users, press on ‘MANAGE USERS’. See Figure 16.

- To add a user, press on the ‘+’ icon in the lower right-hand corner. See Figure 17.
- Input an email address of the user you would like to add, this will give them access to run your appliances. They will receive an email to either log in or sign up for the IntelliFire app. Once they do this, your appliance will appear in their app and they will have access to run the appliance. See Figure 18.
- In your user setup screen, the new user will be listed.
- If you want to remove a user, press trash can icon next to their name and you can delete the user. See Figure 19.
8. Smart Home - Alexa

**SMART HOME - ALEXA**

**CONNECTING AMAZON ALEXA SMART SPEAKER**

*Note:* Your Amazon Alexa speaker must be set up in advance as well as your IntelliFire Wi-Fi module and app.

1. Open the Alexa App on a phone or other mobile device. See Figures 1 & 2.

![Figure 1](image1.png)

![Figure 2](image2.png)

2. Click on menu icon on the upper left part of the App. See Figure 3.

![Figure 3](image3.png)

3. Click on “Skills & Games” on the menu. See Figure 4.

![Figure 4](image4.png)

4. On “Skills & Games” menu click on the Search icon that looks like a magnifying glass. See Figure 5.

![Figure 5](image5.png)
5. Enter “IntelliFire” into the search text entry box then click search. See Figure 6.

6. Click on “IntelliFire” in the search results list. See Figure 7.

7. Click “ENABLE TO USE” to use the skill. See Figure 8.

8. If you see “IFTAPI.net” requires a client certificate, select the first authorization number. See Figure 9.
9. App will go to IntelliFire login page. You will be prompted to log in with your IntelliFire app information to connect the speaker to your appliance and allow access. Use your login information from the IntelliFire app. See Figure 10-11. (If you forgot your password, return to the IntelliFire app and click on “Forgot Password”.)

10. App will return to “Discover Devices” page. If this is the first time of setup then click on “DISCOVER DEVICES”. Otherwise, if you are re-enabling the skill you can click on cancel. See Figure 12.

11. Alexa will automatically direct the Smart Home action. Select ‘Enable to Use’ to get the list of fireplaces associated with the IntelliFire app account. See Figure 13.

12. Once you see the “IntelliFire” skill on the Alexa app, you can control your appliance with your Alexa smart speakers.

Note: What you named your appliance in the IntelliFire app, will be the name you reference when speaking the voice command. For example, if you named it “living room fireplace” then you would say “Alexa, Turn on Living Room Fireplace”. If you want to change the voice command for turning on your fireplace, you can do this by using the instruction section on Edit / Add Appliances for your particular smart device. If you do this, you will also need to unlink IntelliFire app in Alexa app and relink the account.
9. Smart Home - Google

CONNECTING GOOGLE SMART SPEAKER

Note: Your Google smart speaker must be set up in advance as well as your IntelliFire Wi-Fi module and app.

1. Open your Google Home app. On your main screen, you will need to press the ‘+’ add icon and set up device. See Figures 1 and 2.

2. Select “Have something already set up”. See Figure 3.

3. Search for “IntelliFire” by selecting the magnifying glass in upper right hand corner. Once you have selected IntelliFire, you will be prompted to log in with your IntelliFire app information to connect the speaker to your appliance and allow access. See Figure 4. (If you forgot your password, return to the IntelliFire app. and click on “Forgot Password”.)

4. The Home screen should re-appear and state “Account Linked Successfully”. See Figure 5.

Note: What you named your appliance in the IntelliFire app, will be the name you reference when speaking the voice command. For example, if you named it “living room fireplace” then you would say “OK Google, Turn on Living Room Fireplace”. If you want to change the voice command for turning on your fireplace, you can do this by using the instruction section on Edit / Add Appliances for your particular smart device. If you do this, you will also need to unlink IntelliFire app in Google Home and relink the account.
10. Changing a Network Router

Instructions for two options are listed below:

- If your appliance is still connected to the old network router (recommended procedure).
- If you have changed your network router or you are replacing a broken network router.

**Note:** The IntelliFire Wi-Fi module supports 2.4GHz or 2.4GHz / 5GHz dual band Wi-Fi networks only. To check your network frequency, refer to your wireless router manual or contact your internet service provider.

**If your appliance is still connected to the old network router:**

1. Go to IntelliFire app and delete the location of the appliances that will be on your new network router.
   a. **iOS smart devices** – follow “Edit/Add Locations” located in Section 5.
2. Replace network router and verify router is working with a new SSID. The SSID is the network name you set on your router.
3. Go to IntelliFire app and re-setup your appliance:
   a. **iOS smart device** – follow “Set-up Instructions for iOS” located in Section 4.
   b. **Android smart device** – follow “Set-up Instructions for Android” in Section 6.
4. If your are adding additional appliances to this location:
   a. **iOS smart devices** - follow “Edit/Add Appliances” located in Section 5.

**If you have changed your network router or replacing a broken network router:**

1. Replace network router and verify router is working with a new SSID. The SSID is the network name you set on your router.
2. Go to IntelliFire app and delete the location of the appliances that will be on your new network router.
   a. **iOS smart devices** – follow “Edit/Add Locations” located in Section 5.
3. (Recommend that this is performed by a hearth professional) On your appliance, locate the Electronic Control Module (ECM) and press down on the “PILOT” button for 10 seconds. Once you hear a long beep, release button.
4. Go to IntelliFire app and re-setup your appliance:
   a. **iOS smart device** – follow “Set-up Instructions for iOS” located in Section 4.
   b. **Android smart device** – follow “Set-up Instructions for Android” in Section 6.
5. If your are adding additional appliances to this location:
   a. **iOS smart devices** - follow “Edit/Add Appliances” located in Section 5.

Once you have completed adding your appliance to the new router, you can control your appliance with the IntelliFire app.

Figure 1

Note: The IntelliFire Wi-Fi module supports 2.4GHz or 2.4GHz / 5GHz dual band Wi-Fi networks only. To check your network frequency, refer to your wireless router manual or contact your internet service provider.
11. Changing the Primary User’s Email Address

1. Go to IntelliFire app and delete the location of the appliances that will be on your new network router.
   a. **iOS smart devices** – follow “Edit/Add Locations” located in Section 5.

2. Log out of the IntelliFire app. At the bottom of the screen, select “Sign Up” to create a new account with the new email address and password.

3. Log into the IntelliFire app and re-setup your appliance:
   a. **iOS smart device** – follow “Set-up Instructions for iOS” located in Section 4.
   b. **Android smart device** – follow “Set-up Instructions for Android” in Section 6.

4. If you are adding additional appliances to this location:
   a. **iOS smart devices** - follow “Edit/Add Appliances” located in Section 5.

12. Set up Instructions for Commercial Application

In commercial or business environments, it is common to have Firewall security setup on your network. If your router is configured with MAC address filtering enabled, the MAC addresses of the Wi-Fi module must be added to the list of authorized devices.

Please work with your network administrator to understand your network configuration, if required to add the MAC address to your router, use the instructions below.

To do this:

1. Locate and copy the MAC address found on the Wi-Fi module. See Figure 1.

   ![MAC ADDRESS](image)

   **Figure 1** Wi-Fi module MAC Address Location

2. Provide the MAC address to your network administrator.

3. The network administrator will configure the server to allow for an unauthenticated connection to the MAC address of the Wi-Fi module.

4. Once the MAC address is added, download and set up the IntelliFire app:
   a. **iOS smart device** – follow “Set-up Instructions for iOS” located in Section 4.
   b. **Android smart device** – follow “Set-up Instructions for Android” in Section 6.

**Note:** There is a possible exception to the set-up process, depending on instructions you receive from your network administrator to accomplish the unauthenticated connection. Section 4, step 7 (iOS) or Section 6, step 8 (Android), your network administrator may advise you to select the Wi-Fi network but do not enter a network password. In this case, after you select “next” the app will ask if you are sure you want to continue without a password. Select yes and complete the setup.
13. Troubleshooting

NOTE: Weak Wi-Fi signal strength at the appliance may cause the IntelliFire app to lag in response to commands.

If you have access to see the Wi-Fi module and control module in your appliance, the Wi-Fi module will illuminate light sequences that may be helpful during troubleshooting. See Figure 1 in Section 10 for locating your module.

</tr>
</thead>
<tbody>
<tr>
<td>Mobile app becomes unresponsive.</td>
<td>Smart device memory issues; other apps are not working well either.</td>
<td>Download updates and restart IntelliFire app. Restart smart device.</td>
</tr>
<tr>
<td>I did not hear the second beep during the set up process.</td>
<td>Selected the wrong Wi-Fi network, did not enter Wi-Fi network password, entered the wrong network password, or weak network signal at the appliance.</td>
<td>Delete the location in the IntelliFire app. Remove power and then restore the power to your appliance. Re-run the set up process.</td>
</tr>
<tr>
<td>I do not see the IntelliFire network.</td>
<td>No power to the ECM / appliance.</td>
<td>Ensure your appliance has power. Ensure the ECM has power.</td>
</tr>
<tr>
<td></td>
<td>ECM is not Wi-Fi compatible, No Wi-Fi sticker on ECM.</td>
<td>Order a replacement ECM. Contact your dealer.</td>
</tr>
<tr>
<td></td>
<td>Appliance is not Wi-Fi compatible.</td>
<td>Contact your dealer or if you have access to see the Wi-Fi module, confirm that you can see a green LED light (see figure above for location in appliance). If you do not see the light, make sure the Wi-Fi module is plugged into the control module.</td>
</tr>
<tr>
<td></td>
<td>Wi-Fi module is not fully plugged into the appliance.</td>
<td>Continue to the next step if possible. If unable to continue, follow steps below.</td>
</tr>
<tr>
<td></td>
<td>Smart device has Wi-Fi turned off.</td>
<td>Make sure Wi-Fi is turned on. If your device has airplane mode, ensure that is turned off.</td>
</tr>
<tr>
<td>IntelliFire app set up wasn’t successful.</td>
<td>Wrong Wi-Fi network information was used.</td>
<td>Reseting the Wi-Fi Configuration Cycle power to your appliance and try again. If this fails, follow the steps below to reset module. This is recommended to be done by a hearth professional.</td>
</tr>
<tr>
<td></td>
<td>Setup process was interrupted.</td>
<td>1. Access the IFT-ECM. Locate the ‘PILOT’ button on the top of the IFT-ECM.</td>
</tr>
<tr>
<td></td>
<td>Wi-Fi module is not in setup mode.</td>
<td>2. Press and hold the pilot button for 10 seconds. The IFT-ECM will emit one audible beep for 4 seconds. Release the pilot button, and verify that the Wi-Fi module resumes to display one green LED blink every two seconds.</td>
</tr>
<tr>
<td></td>
<td>Change of Wi-Fi Network ID or Password caused by new router or by owner.</td>
<td>3. If there is location info from previous setup attempt(s), delete it now.</td>
</tr>
<tr>
<td>Cannot log into IntelliFire app.</td>
<td>Forgot my email address, used wrong email during set up or invalid email used for IntelliFire app.</td>
<td>4. It is important to close out all running applications, including the IntelliFire app, from your smart device.</td>
</tr>
<tr>
<td></td>
<td>Wrong password was used.</td>
<td>5. Return to Step 1 of your setup instructions and start over.</td>
</tr>
<tr>
<td>User can not add/remove fireplaces.</td>
<td>Only primary user can add/remove appliances from account.</td>
<td>Verify you are the primary user by going to the user management screen in the app.</td>
</tr>

## Troubleshooting (continued)

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Possible Cause</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>My app crashed and closed out.</td>
<td>Issue with the app performance on your device.</td>
<td>Confirm you are on the latest software level of the app, if not, update. If this doesn’t resolve the issue, delete the app and re-download from the App Store or Google Play Store.</td>
</tr>
<tr>
<td>Wireless network signal is weak by the appliance.</td>
<td>To much interference from walls and/or other appliances</td>
<td>Move the wireless router closer to the appliance.</td>
</tr>
<tr>
<td>Accessories are not showing up on the app.</td>
<td>Appliance control module has not been paired.</td>
<td>Install a wireless extender that works with the current router. This will typically require the setup of a new location for all appliances using this network.</td>
</tr>
<tr>
<td></td>
<td>The accessory cable has become unplugged.</td>
<td>Contact your dealer.</td>
</tr>
<tr>
<td>Can’t add a secondary user.</td>
<td>Secondary user has not created an IntelliFire account.</td>
<td>Secondary user needs to download the app and create an account.</td>
</tr>
<tr>
<td>Users are not receiving emails from IntelliFire (example: reset password email).</td>
<td>The email is in your junk/spam mail or your email account security filters prevent you from receiving IntelliFire emails.</td>
<td>Check your junk/ spam mail. If it’s in there, move the email to your main inbox. If it is not there, contact your internet provider or create an email account on another platform (example: gmail.com).</td>
</tr>
<tr>
<td>Thermostat function is not working.</td>
<td>You do not have a remote or wall switch to relay the temperature.</td>
<td>Contact your dealer to purchase a remote or wall switch.</td>
</tr>
<tr>
<td></td>
<td>Your remote or wall switch was not paired to your appliance.</td>
<td>Contact your dealer to pair your remote or wall switch.</td>
</tr>
<tr>
<td></td>
<td>Your remote or wall switch batteries are dead and cannot relay the temperature.</td>
<td>Replace your remote or wall switch batteries.</td>

FCC Compliance Statement:
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and
(2) This device must accept any interference received, including interference that may cause undesired operation of the device.

FCC Warning
Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
• Reorient or relocate the receiving antenna.
• Increase the separation between the equipment and receiver.
• Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
• Consult the dealer or an experienced radio/TV technician for help.

Caution: The Federal Communications Commission warns that changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Canadian DOC Notice
This digital apparatus does not exceed the (Class A/Class B) limits for radio noise emissions from digital apparatus set out in the Radio Interference Regulations of the Canadian Department of Communications.

Canadian IC Notice
This device complies with RSS-210 of Industry and Science Canada. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
