Installation Manual
Installation & Appliance Set-Up

INSTALLER: Leave this manual with party responsible for use and operation.
OWNER: Retain this manual for future reference.

NOTICE: DO NOT DISCARD THIS MANUAL

WARNING
If the information in these instructions is not followed exactly, a fire could result causing property damage, personal injury, or death.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- Do not over fire - If appliance or chimney connector glows, you are over firing. Over firing will void your warranty.
- Comply with all minimum clearances to combustibles as specified. Failure to comply may cause a house fire.

WARNING
HOT SURFACES!
Glass and other surfaces are hot during operation AND cool down.

Hot glass will cause burns.
- Do not touch glass until it is cooled
- NEVER allow children to touch glass
- Keep children away
- CAREFULLY SUPERVISE children in same room as appliance.
- Alert children and adults to hazards of high temperatures
- High temperatures may ignite clothing or other flammable materials.
- Keep clothing, furniture, draperies and other flammable materials away.

WARNING
Fire Risk.
For use with solid wood fuel only. Other fuels may over fire and generate poisonous gases (i.e. carbon monoxide).

 NOTE
To obtain a French translation of this manual, please contact your dealer or visit www.quadrafire.com
Pour obtenir une traduction française de ce manuel, s’il vous plaît contacter votre revendeur ou visitez www.quadrafire.com

Installation and service of this appliance should be performed by qualified personnel. Hearth & Home Technologies recommends HHT Factory Trained or NFI certified professionals.

*Weighted average LHV efficiency using Douglas Fir dimensional lumber and data collected during EPA emission test.
**Weighted average HHV efficiency using Douglas Fir dimensional lumber and data collected during EPA emission test.
***A range of BTU outputs based on EPA Default Efficiency and the burn rates from the low and high EPA tests, using Douglas Fir dimensional lumber.
****A peak BTU out of the appliance calculated using the maximum first hour burn rate from the High EPA Test and the BTU content of cord wood (8600) times the efficiency.

C. Mobile Home Approved

- This appliance is approved for mobile home installations; when not installed in a sleeping room and when an outside combustion air inlet is provided.
- The structural integrity of the mobile home floor, ceiling, and walls must be maintained.
- The appliance must be properly grounded to the frame of the mobile home with #8 copper ground wire.
- Outside Air Kit, part OAK-ACC must be installed in a mobile home installation.

D. Glass Specifications

This appliance is equipped with 5mm ceramic glass. Replace glass only with 5mm ceramic glass. Please contact your dealer for replacement glass.

E. Non-Combustible Materials

Material which will not ignite and burn, composed of any combination of the following:

- Steel
- Plaster
- Brick
- Iron
- Concrete
- Tile
- Glass
- Slate

Materials reported as passing ASTM E 136, Standard Test Method for Behavior of Metals, in a Vertical Tube Furnace of 750° C.

F. Combustible Materials

Material made of or surfaced with any of the following materials:

- Wood
- Compressed Paper
- Plant Fibers
- Plastic
- Plywood/OSB
- Sheet Rock (drywall)

Any material that can ignite and burn: flame proofed or not, plastered or non-plastered.

NOTE: This installation must conform with local codes. In the absence of local codes you must comply with (UM) 84-HUD and NFPA211 in the U.S.A. and CAN/CSA-B365 Installation Codes in Canada.

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage.

For assistance or additional information, consult a qualified installer, service agency or your dealer.

NOTE: Hearth & Home Technologies WILL NOT warranty appliances that exhibit evidence of over-firing. Evidence of over-firing includes, but is not limited to:

- Warped air tube
- Deteriorated refractory brick retainers
- Deteriorated baffle and other interior components

NOTE: Hearth & Home Technologies, manufacturer of this appliance, reserves the right to alter its products, their specifications and/or price without notice.
Install Guide

2 Getting Started

A. Design and Installation Considerations
Consideration must be given to:
- Safety
- Convenience
- Traffic flow
- Chimney and chimney connector required

It is a good idea to plan your installation on paper, using exact measurements for clearances and floor protection, before actually beginning the installation. If you are not using an existing chimney, place the appliance where there will be a clear passage for a factory-built listed chimney through the ceiling and roof.

We recommend that a qualified building inspector and your insurance company representative review your plans before and after installation.

If this appliance is in an area where children may be near it is recommended that you purchase a decorative barrier to go in front of the appliance. Remember to always keep children away while it is operating and do not let anyone operate this appliance unless they are familiar with these operating instructions.

B. Fire Safety
To provide reasonable fire safety, the following should be given serious consideration:

1. Install at least one smoke detector on each floor of your home to ensure your safety. They should be located away from the heating appliance and close to the sleeping areas. Follow the smoke detector manufacturer’s placement and installation instructions, and be sure to maintain regularly.

2. A conveniently located Class A fire extinguisher to contend with small fires resulting from burning embers.

3. A CO detector should be installed in the room with the appliance.

4. A practiced evacuation plan, consisting of at least two escape routes.

5. A plan to deal with a chimney fire as follows:
   a. Evacuate the house immediately
   b. Notify fire department.

CAUTION
Check building codes prior to installation.
- Installation MUST comply with local, regional, state and national codes and regulations.
- Consult insurance carrier, local building, fire officials or authorities having jurisdiction about restrictions, installation inspection, and permits.

WARNING
Asphyxiation Risk.
- DO NOT CONNECT THIS APPLIANCE TO A CHIMNEY FLUE SERVICING ANOTHER APPLIANCE.
- DO NOT CONNECT TO ANY AIR DISTRIBUTION DUCT OR SYSTEM.
May allow flue gases to enter the house.
C. Negative Pressure

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asphyxiation Risk.</td>
</tr>
</tbody>
</table>
- Negative pressure can cause spillage of combustion fumes, soot and carbon monoxide.  
- Appliance needs to draft properly for safety.

Negative pressure results from the imbalance of air available for the appliance to operate properly. It can be strongest in lower levels of the house.

Causes include:
- Exhaust fans (kitchen, bath, etc.)
- Range hoods
- Combustion air requirements for furnaces, water appliances and other combustion appliances
- Clothes dryers
- Location of return-air vents to furnace or air conditioning
- Imbalances of the HVAC air handling system
- Upper level air leaks such as:
  - Recessed lighting
  - Attic hatch
  - Duct leaks

To minimize the effects of negative air pressure:
- Install optional outside air kit with the intake facing prevailing winds during the heating season
- Ensure adequate outdoor air for all combustion appliances and exhaust equipment
- Ensure furnace and air conditioning return vents are not located in the immediate vicinity of the appliance
- Avoid installing the appliance near doors, walkways or small isolated spaces
- Recessed lighting should be a “sealed can” design
- Attic hatches weather stripped or sealed
- Attic mounted duct work and air handler joints and seams taped or sealed
- Basement installations should be avoided

D. Tools And Supplies Needed

Before beginning the installation be sure the following tools and building supplies are available:

- Reciprocating saw
- Framing material
- Pliers
- High temp caulking material
- Hammer
- Gloves
- Phillips screwdriver
- Framing square
- Flat blade screwdriver
- Electric drill and bits
- Plumb line
- Safety glasses
- Level
- Tape measure
- Misc. screws and nails
- 1/2-3/4 in. length, #6 or #8 self-drilling screws

E. Inspect Appliance and Components

- Remove appliance and components from packaging and inspect for damage.
- Report to your dealer any parts damaged in shipment.  
- **Read all the instructions before starting the installation.**  
  Follow these instructions carefully during the installation to ensure maximum safety and benefit.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire Risk.</td>
</tr>
</tbody>
</table>
- Inspect appliance and components for damage.  
- Damaged parts may impair safe operation.
  - Do NOT install damaged components.
  - Do NOT install incomplete components.
  - Do NOT install substitute components.
- Report damaged parts to dealer.
### ATTENTION INSTALLER:

Follow this Standard Work Checklist

This standard work checklist is to be used by the installer in conjunction with, not instead of, the instructions contained in this installation manual.

B. Hearth Protection Requirements

FLOOR PROTECTION: Floor protector must be non-combustible material, extending beneath appliance and to the front, sides and rear as indicated. The floor must be non-combustible or otherwise adequately protected from radiant heat given off by the appliance and from sparks and falling embers. A layer of thin brick or ceramic tile over a combustible floor is not sufficient.

It is necessary to install a Type II floor protector with a minimum $R$ value = 2.04, 16 inches (406mm) in front of glass and 8 inches (203mm) to both sides of the fuel loading door. Open the door and measure 8 inches (203mm) from the side edge of the opening in the face of the appliance.

In Canada, similar floor protection must be provided 18 inches (457mm) in front and 8 inches (203mm) from the sides and rear of the appliance. Figure 10.2 *See exception.*

**EXCEPTION:** Non-combustible floor protector must extend beneath the flue pipe when installed with horizontal venting and extend 2 inches (51mm) beyond each side. See Figure 10.2

---

**WARNING**

Fire Risk.

Hearth pads must be installed exactly as specified. High temperatures or hot embers may ignite concealed combustibles.

---

INSTALLATION: HORIZONTAL WITH MINIMUM 2 FOOT VERTICAL OFF STOVE TOP

| SINGLE WALL PIPE            | 12-1/2 (318) | 7-1/2 (191) | 28-1/2 (724) | 15 (381) | 2 (51) | 15 (381) | 45 (1143) | 18 (457) |
| DOUBLE WALL PIPE            | 12-1/2 (318) | 7-1/2 (191) | 28-1/2 (724) | 15 (381) | 2 (51) | 15 (381) | 45 (1143) | 13 (330) |

INSTALLATION: 90 DEGREE ELBOW OFF TOP OF STOVE THROUGH BACKWALL

| SINGLE WALL PIPE            | 12-1/2 (318) | 7-1/2 (191) | 28-1/2 (724) | 15 (381) | 2 (51) | 15 (381) | 45 (1143) | 18 (457) |
| DOUBLE WALL PIPE            | 12-1/2 (318) | 7-1/2 (191) | 28-1/2 (724) | 15 (381) | 2 (51) | 15 (381) | 45 (1143) | 13 (330) |

INSTALLATION: ALCOVE

| DOUBLE WALL PIPE            | 13-1/2 (343) | 8-1/2 (216) | 28-1/2 (724) | 15 (381) | N/A   | N/A   | 45 (1153) | 13 (330) |

For alcove only: Six inch diameter listed Double wall air insulated connector pipe with UL103 HT listed factory built Class A chimney or masonry chimney. Maximum depth of Alcove shall be no more than 48 inches (1219mm) and the referenced alcove clearances. Canada must comply with CAN/ULC-S269 M87 for the 650° factory built chimney.

* FOLLOW PIPE MANUFACTURES CLEARANCES AS REQUIRED

NOTE: Clearances may only be reduced by means approved by the regulatory authority having jurisdiction

WARNING

Fire Risk.
- Comply with all minimum clearances to combustibles as specified.
- Failure to comply may cause house fire.

NOTE: Service Space

In order to replace the tube channel assembly a clearance of 19 inches (483mm) is required on the right side of stove in order to remove the tubes with the stove in place.

If space is not available, the stove will have to be disconnected from the chimney to proceed with the tube replacement.
Chimney Systems

A. Locating Your Appliance & Chimney
Location of the appliance and chimney will affect performance. As shown in Figure 12.1 the chimney should:

- Install through the warm space enclosed by the building envelope. This helps to produce more draft, especially during lighting and die down of the fire.
- Penetrate the highest part of the roof. This minimizes the affects of wind turbulence and down drafts.
- Consider the appliance location in order to avoid floor and ceiling attic joists and rafters.
- Locate termination cap away from trees, adjacent structures, uneven roof lines and other obstructions.

Your local dealer is the expert in your geographic area and can usually make suggestions or discover solutions that will easily correct your flue problem.

Figure 12.1
B. Chimney Termination Requirements
Follow manufacturer’s instructions for clearance, securing flashing and terminating the chimney. Fig. 13.1 & 13.2
- Must have an approved and Listed cap
- Must not be located where it will become plugged by snow or other material
- Must terminate at least 3 feet (91cm) above the roof and at least 2 feet (61cm) above any portion of the roof within 10 feet (305cm).
- Must be located away from trees or other structures

NOTICE:
- Chimney performance may vary.
- Trees, buildings, roof lines and wind conditions affect performance.
- Chimney height may need adjustment if smoking or overdraft occurs.

NOTICE: Locating the appliance in a basement or in a location of considerable air movement can cause intermittent smoke spillage from appliance. Do not locate appliance near
- Frequently open doors
- Central heat outlets or returns

C. 2-10-3 Rule
These are safety requirements and are not meant to assure proper flue draft.

This appliance is made with a 6 inch (152mm) diameter chimney connector as the flue collar on the appliance.
- Changing the diameter of the chimney can affect draft and cause poor performance.
- It is not recommended to use offsets and elbows at altitudes above 4000 feet above sea level and or when there are other factors that affect flue draft.

Figure 13.1

Figure 13.2
D. Chimney Height / Rise and Run

This product was designed for and tested on a 6 inch (152mm) chimney, 14 to 16 feet (420-480cm) high, (includes appliance height) measured from the base of the appliance. The further your stack height or diameter varies from this configuration, the greater the likelihood it may affect performance.

Chimney height may need to be increased by 2 - 3% per each 1000 feet above sea level. It is not recommended to use offsets or elbows at altitudes above 4000 feet above sea level or when there are other factors that affect flue draft.

WARNING

Fire Risk.
Inspection of Chimney:
• Chimney must be in good condition.
• Meets minimum standard of NFPA 211
• Factory-built chimney must be 6 inch (152mm) UL103 HT.

WARNING

Asphyxiation Risk.
• DO NOT CONNECT THIS Appliance TO A CHIMNEY FLUE SERVICING ANOTHER APPLIANCE.
• DO NOT CONNECT TO ANY AIR DISTRIBUTION DUCT OR SYSTEM.
    May allow flue gases to enter the house.

WARNING

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency or your dealer.

E. Venting Components

Chimney Connector:

It is also known as flue pipe or appliance pipe. The chimney connector joins the appliance to the chimney. It must be a 6 inch (152mm) minimum diameter 24 gauge mild steel black or 26 gauge blued steel, or an approved air-insulated double wall venting pipe.

Thimble:

A manufactured or site-constructed device installed in combustible walls through which the chimney connector passes to the chimney. It is intended to keep the walls from igniting. Site constructed thimbles must meet NFPA 211 Standards. Prefabricated must be suitable for use with selected chimney and meet UL103 Type HT Standards. Follow instructions provided by the manufacturer for manufactured thimbles for masonry chimney and prefabricated chimneys.

Chimney:

The chimney can be new or existing, masonry or prefabricated and must meet the following minimum requirements and as specified in Section 4F.

F. Chimney Systems

Prefabricated Metal Chimney

• Must be minimum 6 inch (152mm) diameter (ID) high temperature chimney listed to UL 103 HT (2100°F) or ULC S629M.
• Must use components required by the manufacturer for installation.
• Must maintain clearances required by the manufacturer for installation.
• Refer to manufacturers instructions for installation.

NOTE: In Canada when using a factory-built chimney it must be safety listed, Type UL103 HT (2100°F) CLASS “A” or conforming to CAN/ULC-S629M, STANDARD FOR 650°C FACTORY- BUILT CHIMNEYS.
Site constructed for masonry chimney installation:

Components

- A minimum length of 12 inches [305mm] (longer for thicker walls) of solid insulated factory-built chimney length constructed to UL 103 Type HT 6 inch (152mm) inside diameter. Chimney needs to extend a minimum of 2 inches (51mm) from the interior wall and a minimum of 1 inch (25mm) from the exterior wall.
- Wall spacer, trim collar and wall band to fit solid pack chimney selected.
- Minimum 8 inch (203mm) diameter clay liner section (if not already present in chimney) and refractory mortar.
- When jurisdiction requires install approved chimney liner in masonry chimney.

Air Clearances

- Masonry chimney clearance must meet NFPA 211 minimum requirement of 2 inches (51mm) to sheet metal supports and combustibles.
- Minimum of 1 inch (25mm) clearance around the chimney connector.
- Top of wall opening is a minimum of 13-1/2 inches (343mm) from ceiling or 4-1/2 inches (114mm) below minimum clearance specified by chimney connector manufacturer. NFPA 211 minimum vertical clearance of 18 inches (457mm) from chimney connector and ceiling or minimum recommended by chimney connector manufacturer. Figure 15.2

Instructions:

1. Open inside wall at proper height for the chimney connector to enter the masonry chimney. Figure 15.2

2. Entry hole to masonry chimney must be lined with an 8 inch (203mm) minimum diameter clay liner, or equivalent, secured with refractory mortar.

3. Construct a 17 inch x 17 inch (432mm x 432mm) outside dimension frame from 2 x 2 framing lumber to fit into wall opening. Inside opening of frame should be no less than 14 inch x 14 inch (356mm x 356mm). Figure 15.2

4. Attach the wall spacer to the chimney side of the frame.

5. Nail the frame into the wall opening. The spacer should be on the chimney side.

6. Insert the section of the solid insulated chimney into the outer wall of the masonry chimney.

7. Tightly secure the length of the solid insulated chimney with the wall band to the masonry chimney.

8. Insert a section of chimney connector into the chimney. Make sure it does not protrude past the edge of the clay chimney liner inside the chimney.

9. Seal the end of the chimney connector to the clay liner with refractory mortar.

10. Install trim collar around the sold pack chimney section.
G. Installing Chimney Components

Chimney Connector

Single wall connector or appliance pipe.
This must be at least 24 gauge mild steel or 26 gauge blue steel. The sections must be attached to the appliance and to each other with the crimped (male) end pointing toward the appliance. All joints, including the connection at the flue collar, should be secured with 3 sheet metal screws. Make sure to follow the minimum clearances to combustibles. Where passage through the wall, or partition of combustible construction is desired in Canada, the installation shall conform to CAN/CSA-B365.

Factory-built listed chimney connector (vented).
A listed connector (vented) must be used when installing this appliance in a mobile home. The listed connectors must conform to each other to ensure a proper fit and seal.

WARNING

Fire Risk.
Do NOT pack insulation or other combustibles between spacers.
• ALWAYS maintain specified clearances around venting and spacers.
• Install spacers as specified.
Failure to keep insulation or other material away from vent pipe may cause fire.

H. Proper Draft

To be sure that your Quadra-Fire insert burns properly, the chimney draft (static pressure) should be approximately -0.10 inches water column (W.C.) during a high burn and -0.04 inches W.C. during a low burn, measured 6 inches (152mm) above the top of the insert after one hour of operation at each burn setting.
A. Pedestal Assembly and Ash Removal System (ARS) Installation

**NOTE:** The Ash Removal System, must be installed first before installing the pedestal.

**Included in Kit:** ARS door assembly, ARS latch assembly, Pedestal, Ash Pedestal Drawer, ARS Channel, ARS Cover, and fastener package.

**Tools Required:** 7/16 socket wrench, 3/8 open end wrench, Phillips screw driver, and hammer.

**Begin installing the ARS System.**

1. Remove leg mount brackets packaged inside of firebox and discard.
2. Remove the 3 bricks in the front most part of the firebox (Figure 17.1).
3. Lay appliance on its back on a protective pad or pallet (Figure 17.2).
4. Remove heat shield by loosening the four bolts using 3/8 open end wrench (Figure 17.2).
5. Remove 8 nuts that hold the cover plate on using a 7/16 socket wrench; discard cover plate (Figure 17.2).
6. Remove knock out from bottom of firebox by using a hammer (Figure 17.2).
7. Install ash door assembly by sliding the rod at an angle into the slot on the left side (Figure 17.3).
8. Slide the ash door over the 8 screws protruding from the bottom of the appliance. Secure with nuts and washers using 7/16 socket wrench (Figure 17.3).
9. Install ARS latch by sliding latch assembly over 2 threaded studs protruding from the bottom on the left hand side of the appliance. Secure by using two nuts use 7/16 socket wrench (Figure 18.1 on page 18).
10. Add knob to handle rod (Figure 18.2 on page 18).
11. Using two bolts and two flange nuts to secure ARS channel using 3/8 open end wrench and 7/16 socket wrench (Figure 18.3 on page 18).

**CHECK GASKET!**

- Verify that the gasket is present and that the glossy side is away from firebox bottom.
- It is important that the gasket is put in correctly for sealing capabilities.

**WARNING**

Do NOT operate before fully assembling components. Burning your stove without a pedestal or leg kit attached:
- Will void your warranty.
- May result in property damage or personal injury.

**WARNING**

Do NOT operate before fully assembling components. Burning your stove without a pedestal or leg kit attached:
- Will void your warranty.
- May result in property damage or personal injury.
Ped Kit and Ash Removal System (Cont’d)

Installing Ped Kit
1. Follow Beginning installing the ARS system instructions provided on page 17.
2. Slide pedestal over adapter on bottom of appliance and secure with four screws using Phillips head screwdriver (Figure 19.1 on page 19).
3. Install ARS Spacer on left hand side with one bolt using Phillips head screwdriver (Figure 18.4).
4. Carefully stand stove up and place in desired location.

Finishing the ARS Installation
1. Replace front 3 bricks that were removed in step 1 (Figure 17.1 on page 17).
2. Install the ash drawer to pedestal base.
3. Install ARS access cover inside of ARS Channel that is located inside the firebox (Figure 18.2).

Caution!

CHECK BAFFLE BOARDS & CERAMIC BLANKET!
- Verify that the baffle boards and ceramic blanket are in their proper locations.
- It is important that the baffle boards and ceramic blanket are correctly installed for proper burn safety.

NOTE: If installing a floor installation of an outside air kit on a Step Top model with a pedestal assembly you must attach the enclosed cover plate with 4 screw to the back of the stove. Other wise you may discard this piece (Figure 18.3).
B. Access Cover Handle
Insert Access Cover Handle handle into slot of ARS Cover to remove ARS Cover for cleaning ash out of firebox (Figure 19.4).

C. Leg Kit and Ash Removal System (ARS) Installation

**NOTE:** The Ash Removal System, must be installed first before installing the legs.

**Included in Kit:** ARS door assembly, ARS latch assembly, Ash Removal Box, Ash Removal Drawer, ARS Channel, ARS Cover, and fastener package.

**Tools Required:** 7/16 socket wrench, 9/16 socket wrench, 3/8 open end wrench, Phillips screw driver, and hammer.

**Begin installing the ARS System.**

1. Remove leg mount brackets packaged inside of firebox and set aside.
2. Remove the 3 bricks in the front most part of the firebox (Figure 19.1).
3. Lay appliance on its back on a protective pad or pallet (Figure 19.1).
4. Remove heat shield by loosening the four bolts using 3/8 open end wrench (Figure 19.1).
5. Remove 8 nuts that hold the cover plate on using a 7/16 socket wrench; discard cover plate (Figure 19.2).

**Warning!**

**CHECK GASKET!**

- Verify that the gasket is present and that the glossy side is away from firebox bottom.
- It is important that the gasket is put in correctly for sealing capabilities.
6. Remove knock out from bottom of firebox by using a hammer (Figure 17.2 on page 17).

7. Install ash door assembly by sliding the rod at an angle into the slot on the left side (Figure 17.3 on page 17).

8. Slide the ash door over the 8 screws protruding from the bottom of the appliance. Secure with nuts and washers using 7/16 socket wrench (Figure 17.3 on page 17).

9. Install ARS latch by sliding latch assembly over 2 threaded studs protruding from the bottom on the left hand side of the appliance. Secure by using two nuts use 7/16 socket wrench (Figure 18.1 on page 18).

10. Add knob to handle rod (Figure 18.2 on page 18).

11. Use 2 bolts and 2 flange nuts to secure ARS channel using 3/8 open end wrench and 7/16 socket wrench (Figure 18.3 on page 18).

Installing Queen Anne Leg ARS Kit

1. Follow Beginning installing the ARS system instructions provided on page 18.

2. Install ARS Spacer on left hand side with one bolt using Phillips head screwdriver (Figure 18.4 on page 18).

3. Install leg brackets and ash drawer using four screws and Phillips head screwdriver.
   - Start bottom two bolts through ash drawer, leg mount and into the bottom of the appliance (Figure 20.1).
   - Align top holes and repeat; secure all four bolts.

4. Install legs onto mounting brackets making sure the legs are up against the bracket and secure with bolts and washers using a 3/8 open end wrench (Figure 20.2).

5. Install leveling bolts into 2 legs; these leveling legs should be in opposite corners (Figure 20.2).

6. Carefully stand stove up and place in desired location.

7. Use leveling bolts on legs to stabilize and level stove (Figure 20.3).

Finishing the ARS Installation

1. Replace front 3 bricks that were removed (Figure 20.4).

2. Install the ash drawer to ASH Removal.

3. Install ARS access cover inside of ARS Channel that is located inside the firebox (Figure 20.4).

Caution!

CHECK BAFFLE BOARDS & CERAMIC BLANKET!
- Verify that the baffle boards and ceramic blanket are in their proper locations.
- It is important that the baffle boards and ceramic blanket are in correctly installed for proper burn safety.
D. Traditional Leg Installation

**Included with Appliance:** Leg brackets; inside firebox.

**Tools Required:** 9/16 socket wrench and Phillips screw driver.

**Installing your traditional legs to your appliance.**

1. Remove leg brackets from inside of firebox of appliance.
2. Lay body of stove on its back on a protective pad or pallet.
3. Remove four screws from bottom of appliance (Figure 21.1).
4. Install leg brackets to bottom of appliance using the four just removed screws in step 3.

**NOTE:** There is a right and a left of the leg brackets (Figure 21.1).

5. Install six screws to the bottom of the leg brackets (Figure 21.1).
6. Attach legs onto leg brackets and secure with bolts and washers.
7. Carefully stand stove up and place in desired location.

**CAUTION**

**Do NOT** tilt the appliance on the cast iron legs.
- Tilting could lead to property damage.
- Lift the appliance upright and place it into position on the floor protector.

8. Thread allen bolts through nuts until flush (Figure 21.2)
9. Slide allen bolt/nut assemblies into slots of two of the legs with the nuts on the bottom (Figure 21.3).

**Note:** Legs with leveling bolts need to be on opposite sides of the appliance - one in the front and one in the back (Figure 21.1)

10. Use allen wrench to adjust legs up and down to desired level (Figure 21.4).

---

**Caution!**

**CHECK BAFFLE BOARDS & CERAMIC BLANKET!**
- Verify that the baffle boards and ceramic blanket are in their proper locations.
- It is important that the baffle boards and ceramic blanket are correctly installed for proper burn safety.
E. Door Handle Assembly

INSTALL NEW DOOR HANDLE

1. Install washer on door handle shaft and slide door handle through door.
2. Install second washer(s) as shown and install key in groove.
3. Align groove in latch cam with key; slide latch cam over shaft.
4. Install locknut.
   
   CAUTION! DO NOT OVER TIGHTEN LOCKNUT. DOOR HANDLE NEEDS TO MOVE SMOOTHLY.

5. Install fiber hand using a clockwise motion until the fiber handle is snug against the door handle shaft.

F. Outside Air Kit Installation

A source of air (oxygen) is necessary in order for combustion to take place. Whatever combustion air is consumed by the fire must be replaced. Air is replaced via air leakage around windows and under doors. In homes that have tightly sealed doors and windows, an outside air source is needed. An optional Outside Air Kit is available.

Optional OAK-ACC includes: Termination cap, (2) wire ties, flex adapter, and fasteners

Items Needed for Installation (not supplied)

- 4 inch flex aluminum pipe, or if using alternate material, then it shall be made from durable, non-combustible, heat resistant material up to 350°F. Cut the pipe to the required length for your installation.
- Phillips head screw driver
- Silicone sealant
- Drills and saws necessary for cutting holes through the wall or flooring in your home.

Installation Instructions

1. Remove all materials from packing box.
2. Floor & Rear Installation: Cut a 4 inch (102mm) hole in outside wall or floor to accommodate outside air piping. Use 4 inch (102mm) aluminum metal flex or rigid piping to directly connect outside air to appliance intake. Use the supplied termination cap with a rodent screen. Seal between the wall (or floor) and the pipe with silicone to prevent moisture penetration.

WARNING

Asphyxiation Risk.
Length of outside air supply duct shall NOT exceed the length of the vertical height of the exhaust flue.
- Fire will not burn properly
- Smoke spillage occurs when door is opened due to air starvation

WARNING

Fire Risk. Asphyxiation Risk.
Do not draw outside combustion air from:
- Wall, floor or ceiling cavity
- Enclosed space such as an attic or garage
- Close proximity to exhaust vents or chimneys
Fumes or odor may result

WARNING

Asphyxiation Risk.
Outside air inlet must be located to prevent blockage from:
- Leaves   • Snow or ice   • Other debris
Block may cause combustion air starvation
Smoke spillage may set off alarms or irritate sensitive individuals.
G. Blower (Optional)

Tools Required: #2 Phillips head screwdriver

1. Locate bolts supplied with the blower.
2. Align holes in mounting flange of blower with bolt holes in appliance. Blower should be positioned at bottom of rear outer skin as shown in Figure 23.1
3. Re-insert and tighten bolts, securing blower onto outer wall of appliance.
4. Place the bracket containing the snap disc and magnet under the bottom left rear corner.

See Owner’s Manual for detailed operating instructions for the blower and snap disc.

H. Adjusting The Blower Speed Control

The blower speed control for this unit is adjusted at the factory, and normally does not require further adjustment.

1. With the appliance plugged in, turn the speed control knob to slow (full clockwise).
2. With a small screwdriver, adjust the blower speed by turning the adjustment mechanism through the hole on the side of the speed control.
3. Adjust the speed so the blower runs slowly, but does not stop. Turn clockwise to slow the blower and counterclockwise to increase the speed.

NOTE: When the speed control is turned clockwise, it will click on to high speed. Continue to turn the speed control clockwise to decrease the speed. At full clockwise, the blower should blow gently, but should not stop.

CAUTION

Shock Risk.
- Do NOT remove grounding prong from plug.
- Route cord away from appliance.
- Do NOT route cord under or in front of appliance.
- Plug directly into properly grounded 3 prong receptacle.

Secure wires with wire tie

Snap Disc Bracket with Magnet

MANUAL: Over-rides the Snap Disc

AUTO: Fan will turn ON/OFF Automatically by the Snap Disc

Controls the Fan Speed

Figure 23.1
6 Mobile Home Installation

You must use a Quadra-Fire Outside Air Kit Part OAK-ACC; which is available from you dealer, for installation in a mobile home.

1. An outside air inlet must be provided for combustion.
2. Appliance must be secured to the mobile home structure by bolting the legs or pedestal to the floor.
3. Appliance must be grounded with #8 solid copper grounding wire or equivalent and terminated at each end with N.E.C. approved grounding device.
4. Appliance must be installed with an approved UL103 HT ventilated chimney connector, UL103 HT chimney, and terminal cap with spark arrestor. Never use a single wall connector (appliance pipe) in a mobile home installation. Use only double-wall connector pipe, Dura-Vent DVL, Selkirk Metalbestos DS or Security DL double-wall connector or any listed double-wall connector pipe.
5. In Canada, this appliance must be connected to a 6 inch (152mm) factory-built chimney conforming to CAN/ULC-629M, STANDARD FOR FACTORY BUILT CHIMNEYS.
6. Follow the chimney and chimney connector manufacturer’s instructions when installing the flue system for use in a mobile home.
7. Maintain clearance to combustibles.
8. Floor protection requirements must be followed precisely.
9. Use silicone to create an effective vapor barrier at the location where the chimney or other component penetrates to the exterior of the structure.

NOTE: Offsets from the vertical, not exceeding 45°, are allowed per Section 905(a) of the Uniform Mechanical Code (UMC). Offsets greater than 45° are considered horizontal and are also allowed, providing the horizontal run does not exceed 75% of the vertical height of the vent. Construction, clearance and termination must be in compliance with the UMC Table 9C. This installation must also comply with NFPA 211.

NOTE: Top sections of chimney must be removable to allow maximum clearance of 13.5 feet (411cm) from ground level for transportation purposes.

10. Burn seasoned cord wood only. Other types of fuels may generate poisonous gases (e.g., carbon monoxide).
11. If appliance burns poorly while an exhaust blower is on in home, (i.e., range hood), increase combustion air.
12. Installation shall be in accordance with the Manufacturers Home & Safety Standard (HUD) CFR 3280, Part 24.
## Accessory List

**IMPORTANT:** THIS IS DATED INFORMATION. Parts must be ordered from a dealer or distributor. **Hearth and Home Technologies does not sell directly to consumers.** Provide model number and serial number when requesting service parts from your dealer or distributor.
