*Weighted average LHV (Low Heating Value) efficiency using Douglas Fir dimensional lumber and data collected during EPA emissions test. LHV assumes the moisture is already in a vapor state so there is no loss in energy to vaporize.

**Weighted average HHV (High Heating Value) efficiency using Douglas Fir dimensional lumber and data collected during EPA emissions test. HHV includes the energy required to vaporize the water in the fuel.

***A range of BTU outputs calculated using HHV Efficiency and the burn rates from EPA tests, using Douglas Fir dimensional lumber.

****A peak BTU out of the unit calculated using the maximum first hour burn rate from the High EPA Test and BTU content of Douglas Fir dimensional lumber (8600) times the efficiency.

This Expedition II insert is Certified to comply with 2020 crib wood particulate emission standards.

This wood appliance needs periodic inspection and repair for proper operation. Consult the owner’s manual for further information. It is against federal regulations to operate this wood appliance in a manner inconsistent with the operating instructions in the owner’s manual.

NOTE: This installation must conform with local codes. In the absence of local codes you must comply with the UL1482-2011, (UM) 84-HUD and NPFA211 in the U.S.A. and the ULC S628-93 and CAN/CSA-B365 Installation Codes in Canada. NOT APPROVED FOR MOBILE HOME INSTALLATIONS IN CANADA!

Approved for ZC fireboxes.
C. Mobile Home Approved (USA only)
- **WARNING:** DO NOT INSTALL IN A SLEEPING ROOM.
- **CAUTION:** THE STRUCTURE INTEGRITY OF THE MOBILE HOME FLOOR, WALL, AND CEILING/ROOF MUST BE MAINTAINED.
- The appliance must be properly grounded to the frame of the mobile home with #8 copper ground wire, and chimney must be listed to UL103 HT or a listed UL-1777 full length six inch (152mm) diameter liner must be used.
- Outside Air Kit, part OAK-ACC must be installed in a mobile home installation.

D. Electrical Rating
Maximum 1.5 Amps (blower).

E. Glass Specifications
This stove is equipped with 5mm ceramic glass. Replace glass only with 5mm ceramic glass. Please contact your dealer for replacement glass.

F. Non-Combustible Materials
Material which will not ignite and burn, composed of any combination of the following:
- Steel
- Plaster
- Brick
- Iron
- Concrete
- Tile
- Glass
- Slate

Materials reported as passing ASTM E 136, Standard Test Method for Behavior of Metals, in a Vertical Tube Furnace of 750° C.

G. Combustible Materials
Material made of/or surfaced with any of the following materials:
- Wood
- Compressed Paper
- Plant Fibers
- Plastic
- Plywood/OSB
- Sheet Rock (drywall)
Any material that can ignite and burn; flame proofed or not, plastered or non-plastered.

H. Sleeping Room
When an appliance is installed in a sleeping room an outside air kit is required and it is recommended that a smoke and/or CO alarm be installed in the bedroom. The size of the room must be at least 50ft³ per 1,000 Btu/hr stove input

I. California - Prop65

**WARNING**
This product and the fuels used to operate this product (wood), and the products of combustion of such fuels, can expose you to chemicals including carbon black, which is known to the State of California to cause cancer, and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to: WWW.P65Warnings.ca.gov

**WARNING**
Fire Risk.
Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by, the following actions:
- Installation and use of any damaged appliance.
- Modification of the appliance.
- Installation other than as instructed by Hearth & Home Technologies.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.
- Operating appliance without fully assembling all components.
- Operating appliance without legs attached (if supplied with unit).
- Do NOT Over fire - If appliance or chimney connector glows, you are over firing.

Any such action that may cause a fire hazard.

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage.

For assistance or additional information, consult a qualified installer, service agency or your dealer.

Hearth & Home Technologies WILL NOT warranty stoves that exhibit evidence of over-firing. Evidence of over-firing includes, but is not limited to:
- Warped air tube
- Deteriorated refractory brick retainers
- Deteriorated baffle and other interior components

**NOTE:** Hearth & Home Technologies, manufacturer of this appliance, reserves the right to alter its products, their specifications and/or price without notice.
Getting Started

A. Design and Installation Considerations

CAUTION

Check building codes prior to installation.
• Installation MUST comply with local, regional, state and national codes and regulations.
• Consult insurance carrier, local building, fire officials or authorities having jurisdiction about restrictions, installation inspection, and permits.

Before installing, determine the following:
• Type of chimney connector to be used
  - Single wall, 6 inch (152mm) diameter, stainless steel, or
  - Double wall, 6 inch (152mm) diameter, stainless steel
• Consult page 28 for clearances to combustibles
• Power outlet located close by for optional blower

WARNING

Asphyxiation Risk.
• Do NOT connect this unit to a chimney flue servicing another appliance.
• Do NOT connect to any air distribution duct or system.
  May allow flue gases to enter the house.

B. Draft

Draft is the pressure difference needed to vent appliances successfully. When a appliance is drafting successfully, all combustion byproducts are exiting the home through the chimney.

Considerations for successful draft include:
• Preventing negative pressure
• Location of appliance and chimney

To be sure that your appliance burns properly:
• During the burn, the chimney draft (static pressure) should be approximately -0.07 inch water column (W.C.)
• Measure the W.C at 6 inches (152mm) above the top of the appliance after one hour of operation.

NOTICE: Hearth & Home Technologies assumes no responsibility for the improper performance of the appliance system caused by:
• Inadequate draft due to environmental conditions
• Down drafts
• Tight sealing construction of the structure
• Mechanical exhausting devices
• Over drafting caused by excessive chimney heights
• Ideal performance is with height of chimney between 14-16 feet (4.26-4.88m) measured from the base of the appliance.
C. Negative Pressure

![WARNING]

**Asphyxiation Risk.**
- Negative pressure can cause spillage of combustion fumes, soot and carbon monoxide.
- Appliance needs to draft properly for safety.

Negative pressure results from the imbalance of air available for the appliance to operate properly. It can be strongest in lower levels of the house.

**Causes include:**
- Exhaust fans (kitchen, bath, etc.)
- Range hoods
- Combustion air requirements for furnaces, water heaters and other combustion appliances
- Clothes dryers
- Location of return-air vents to furnace or air conditioning
- Imbalances of the HVAC air handling system
- Upper level air leaks such as:
  - Recessed lighting
  - Attic hatch
  - Duct leaks

To minimize the effects of negative air pressure:
- Install the outside air kit with the intake facing prevailing winds during the heating season
- Ensure adequate outdoor air for all combustion appliances and exhaust equipment
- Ensure furnace and air conditioning return vents are not located in the immediate vicinity of the appliance
- Avoid installing the appliance near doors, walkways or small isolated spaces
- Recessed lighting should be a "sealed can" design
- Attic hatches weather stripped or sealed
- Attic mounted duct work and air handler joints and seams taped or sealed
- Basement installations should be avoided

D. Tools And Supplies Needed

Before beginning the installation be sure the following tools and building supplies are available:
- Reciprocating saw
- Framing material
- Pliers
- High temp caulking material
- Hammer
- Gloves
- Phillips screwdriver
- Framing square
- Flat blade screwdriver
- Electric drill and bits
- Plumb line
- Safety glasses
- Level
- Tape measure
- Misc. screws and nails
- 7/16 socket or wrench
- 1/2-3/4 in. length, #6 or #8 self-drilling screws

E. Inspect Appliance and Components

- Remove appliance and components from packaging and inspect for damage.
- Vent system components and doors are shipped in separate packages.
- Report to your dealer any parts damaged in shipment.
- Read all the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.

![WARNING]

**Fire Risk.**
Inspect appliance and components for damage. Damaged parts may impair safe operation.
- Do NOT install damaged components.
- Do NOT install incomplete components.
- Do NOT install substitute components.
Report damaged parts to dealer.

![WARNING]

**Asphyxiation Risk.**
- Negative pressure can cause spillage of combustion fumes, soot and carbon monoxide.
- Appliance needs to draft properly for safety.

**Fire Risk.**
Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by, the following actions:
- Installation and use of any damaged appliance.
- Modification of the appliance.
- Installation other than as instructed by Hearth & Home Technologies.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.
- Operating appliance without fully assembling all components.
- Operating appliance without legs attached (if supplied with unit).
- **Do NOT Over fire** - If appliance or chimney connector glows, you are over firing.
Any such action that may cause a fire hazard.
F. Install Checklist

ATTENTION INSTALLER:
Follow this Standard Work Checklist

This standard work checklist is to be used by the installer in conjunction with, not instead of, the instructions contained in this installation manual.

Customer: __________________________________________
Date Installed: ________________________________
Lot / Address: ___________________________________________________________________
Location of Appliance: ____________________________________________
Installer: ____________________________
Dealer / Distributor Phone #: _______________________
Serial #: ________________________________
Model: _______________________________________

WARNING! Risk of Fire or Explosion! Failure to install appliance according to these instructions can lead to a fire or explosion.

Appliance Install
Verified clearances to combustibles.
Appliance is leveled and connector is secured to appliance.
Hearth extension size/height decided.
Outside air kit installed.
Floor protection requirements have been met.
If appliance is connected to a masonry chimney, it should be cleaned and inspected by a professional. If installed to a factory built metal chimney, the chimney must be installed according to the manufacturer’s instructions and clearances.

Chimney
Chimney configuration complies with diagrams.
Chimney installed, locked and secured in place with proper clearance.
Chimney meets recommended height requirements (14-16 feet).
Roof flashing installed and sealed.
Terminations installed and sealed.

Clearances
Combustible materials not installed in non-combustible areas.
Verified all clearances meet installation manual requirements.
Mantels and wall projections comply with installation manual requirements.
Protective hearth strips and hearth extension installed per manual requirements.

Appliance Setup
All packaging and protective materials removed.
Firebrick, baffle and ceramic blanket installed correctly.
All labels have been removed from the door.
All packaging materials are removed from inside/under the appliance.
Manual bag and all of its contents are removed from inside/under the appliance and given to the party responsible for use and operation.

Hearth & Home Technologies recommends the following:
• Photographing the installation and copying this checklist for your file.
• That this checklist remain visible at all times on the appliance until the installation is complete.

Comments: Further description of the issues, who is responsible (Installer/Builder/Other Trades, etc.) and corrective action needed:
Comments communicated to party responsible ________________________________ by _____________________ on ___________

(Builder / Gen. Contractor) (Installer) (Date)
3 Dimensions and Clearances

A. Dimensions

Figure 9.5 - Side View with Cast Surround and Optional 15 Degree Adapter (DV-6DLR-E15ADSS)

Figure 9.6 - Side View with Cast Surround and Optional 15 Degree Adapter (DV-6DLR-E15ADSS)
B. Clearances to Combustibles

In Canada a full length 6 inch (152mm) S635 flue liner required as per ULC S628.
In USA a minimum 5 ft length (1.82m), 6 inch (152mm) diameter flue liner is required as per UL 1482.

**NOTE:** Keep Ashlip Clear of Ashes

**FIGURE 10.3**

<table>
<thead>
<tr>
<th>Minimum Opening Dimensions</th>

<td>445</td>
</tr>
</tbody>
</table>

**NOTE:** Minimum opening dimensions include a 1/4 inch (6mm) clearance around unit.

To calculate mantel height requirement, multiply the depth of the mantel by 0.78 inches then add 38.375 inches to the total.

**WARNING**

Fire Risk.
- Comply with all minimum clearances to combustibles as specified.
- Failure to comply may cause house fire.

**NOTE:** Clearances may only be reduced by means approved by the regulatory authority having jurisdiction.
NOTE: Clearances may only be reduced by means approved by the regulatory authority having jurisdiction.

Fire Risk.
- Comply with all minimum clearances to combustibles as specified.
- Failure to comply may cause house fire.

NOTE: Hearth Rug may be used in Suggested Area.

Material

Thermal Resistance: R value
The R value is a measure of a material's resistance to heat transfer.

R value is convenient when more than one material is used since you can add the R values together, whereas you can not do this for k value.

The HIGHER the R factor means less heat is being conducted through the non-combustible material to the combustible material beneath it.

The R value of a material must be equal or larger than the required R value to be acceptable.
Chimney Systems

A. Locating Your Stove & Chimney
Location of the appliance and chimney will affect performance. As shown in figure 12.1 the chimney should:
• Install through the warm space enclosed by the building envelope. This helps to produce more draft, especially during lighting and die down of the fire.
• Penetrate the highest part of the roof. This minimizes the affects of wind turbulence and down drafts.
• Consider the appliance location in order to avoid floor and ceiling attic joists and rafters.
• Locate termination cap away from trees, adjacent structures, uneven roof lines and other obstructions.
Your local dealer is the expert in your geographic area and can usually make suggestions or discover solutions that will easily correct your flue problem.

Figure 12.1
B. Chimney Termination Requirements

Follow manufacturer’s instructions for clearance, securing flashing and terminating the chimney (Figure 13.1 & 13.2).
- Must have an approved and Listed cap
- Must not be located where it will become plugged by snow or other material
- Must terminate at least 3 feet (91cm) above the roof and at least 2 feet (61cm) above any portion of the roof within 10 feet (305cm).
- Must be located away from trees or other structures

NOTICE: Chimney performance may vary.
- Trees, buildings, roof lines and wind conditions affect performance.
- Chimney height may need adjustment if smoking or overdraft occurs.

C. 2-10-3 Rule

These are safety requirements and are not meant to assure proper flue draft.

This appliance is made with a 6 inch (152mm) diameter chimney connector as the flue collar on the unit.
- Changing the diameter of the chimney can affect draft and cause poor performance.
- It is not recommended to use offsets and elbows at altitudes above 4000 feet above sea level and or when there are other factors that affect flue draft.

NOTICE: Locating the appliance in a basement or in a location of considerable air movement can cause intermittent smoke spillage from appliance. Do not locate appliance near
- Frequently open doors
- Central heat outlets or returns

Pitched Roof

![Figure 13.1](image1.png)

Flat Roof

![Figure 13.2](image2.png)
D. Venting Systems

Chimney Connector:
It is also known as flue pipe or stove pipe. It must be 6 inches (152mm) minimum diameter stainless steel connector pipe.

Chimney:
The chimney can be new or existing, masonry or prefabricated and must meet the following minimum requirements as specified below.

In Canada a full length 6 inch (152mm) S635 flue liner required as per ULC S628.
In USA a minimum 5 ft length (1.82m), 6 inch (152mm) diameter flue liner is required as per UL 1482.

E. Inspections
Existing chimneys should be inspected and cleaned by a qualified professional prior to installation. The chimney must not have cracks, loose mortar or other signs of deterioration and blockage. Hearth & Home recommends a NFI or CSIA certified professional or a technician, under the direction of a certified professional, conduct a Level II inspection per NFPA 211.

F. Chimney Height / Rise and Run
This product was designed for and tested on a 6 inch (152mm) chimney, 14 to 16 feet (420-480cm) high, (includes appliance height) measured from the base of the appliance. The further your stack height or diameter varies from this configuration, the greater the likelihood it may affect performance.

Chimney height may need to be increased by 2 - 3% per each 1000 feet above sea level. It is not recommended to use offsets or elbows at altitudes above 4000 feet above sea level or when there are other factors that affect flue draft.

WARNING
Asphyxiation Risk.
• DO NOT CONNECT THIS Appliance TO A CHIMNEY FLUE SERVICING ANOTHER APPLIANCE.
• DO NOT CONNECT TO ANY AIR DISTRIBUTION DUCT OR SYSTEM. May allow flue gases to enter the house.

G. Securing Chimney Components
All joints should be secured with 3 sheet metal screws or rivets per pipe manufacturers instructions. The sections must be attached to the insert and to each other with the crimped (male) end pointing toward the insert (Figure 15.1).

WARNING
Fire Risk.
Follow venting manufacturer’s clearances and instructions when installing venting system.
H. Larger Chimneys
It is recommended that chimneys with larger diameters than 6 inches (152mm) be relined. An oversized flue can affect draft and impair performance and will allow increased build-up of creosote.

**NOTICE:** Check with your local building authorities and/or consult the National Fire Protection Association (NFPA 211).

I. Masonry Chimney

This insert conforms with the UL 1482 and ULC S628 (Canada) in all respects, and is approved to UL & ULC safety standards for installation and use within a fireplace with a masonry chimney in accordance with NFPA 211 and CAN/CSA-B365-01.

- Must meet minimum standards of NFPA 211.
- Must have at least 5/8 inch (16mm) fire clay lining joined with refractory cement (Installations into a clay flue without a stainless steel liner may reduce draw which affects performance, will cause the glass to darken and produce excessive creosote).
- The masonry wall of the chimney, if brick or modular block, must be a minimum of 4 inches (102mm) nominal thickness.
- A chimney of rubble stone must be at least 12 inches (305mm) thick.

**NOTE:** In Canada, this fireplace insert must be installed with a continuous chimney liner of a 6 inch (152mm) diameter extending from the fireplace insert to the top of the chimney. The chimney liner must conform to the Class 3 requirements of CAN/ULC-S635, Standard for Lining Systems for Existing Masonry or Factory-Built Chimneys and Vents, or CAN/ULC-S640, Standard for Lining Systems for New Masonry Chimneys.
J. Metal Heat Circulating Masonry
This insert conforms with the safety standard UL-1482 and ULC S628 (Canada) in all respects and is approved to UL & ULC safety standards for installation and use within a fireplace with masonry chimney, in accordance with NFPA 211, with a direct flue collar connection.

K. Prefabricated Metal Chimney
The chimney can be new or existing, masonry or prefabricated and must meet the following minimum requirements:
• Must be minimum 6 inch (152mm) inside diameter of high temperature chimney listed to UL 103 HT (2100°F) or ULC S628.
• Must use components required by the manufacturer for installation.
• Must maintain clearances required by the manufacturer for installation.
• Refer to manufacturers instructions for installation
• This insert is listed to UL 1482 Standard and is approved for installation into listed factory-built zero clearance fireplaces listed to UL 127 conforming to the following specifications and instructions:
  • The original factory-built clearance fireplace chimney cap must be re-installed after installing the approved chimney liner meeting type UL 103 HT requirements (2100°F) per UL 1777.
  • If the chimney is not listed as meeting HT requirements, or if the factory built fireplace was tested prior to 1998, a full height listed chimney liner must be installed from the appliance flue collar to the chimney top.
  • The liner must be securely attached to the insert flue collar and the chimney top.
  • The air flow of the factory-built zero-clearance fireplace system must not be altered. The flue liner top support attachment must not reduce the air flow for the existing air-cooled chimney system.

NOTE: Refer to chimney liner manufacturer for recommendations on supporting the liner. Installation into fireplaces without a permit will void the listing.

- No dilution air is allowed to enter the chimney.
  a. Secure the fireplace damper in the open position. If this cannot be accomplished, it will be necessary to remove the damper
  b. Seal damper area of chimney around chimney connector with a high temperature sealant or seal insert against the face of the fireplace.
  c. Both methods must be removable and replaceable for cleaning and re-installation.

### Minimum Opening Dimensions

<table>
<thead>
<tr>
<th></th>
<th>Inches</th>
<th>Millimeters</th>
</tr>
</thead>
<tbody>
<tr>
<td>A Height</td>
<td>23-3/8</td>
<td>594</td>
</tr>
<tr>
<td>B Front Width</td>
<td>32</td>
<td>813</td>
</tr>
<tr>
<td>C Back Width</td>

<td>606</td>
</tr>
<tr>
<td>D Depth (Steel Surround)</td>
<td>18-1/4</td>
<td>464</td>
</tr>
<tr>
<td>D Depth (Cast Surround)</td>
<td>17-1/2</td>
<td>445</td>
</tr>
</tbody>
</table>

NOTICE: In Canada when using a factory-built chimney it must be safety listed, Type UL103 HT (2100°F) [1149°C] CLASS “A” or conforming to CAN/ULC-S629M, STANDARD FOR 650°C FACTORY-BUILT CHIMNEYS.

**WARNING**

Fire Risk.
When lining air-cooled factory-built chimneys:
• Run chimney liner approved to UL 1777 Type HT requirements (2100°F)
• Re-install original factory built chimney cap ONLY
• DO NOT block cooling air openings in chimney
• Blocking cooling air will overheat the chimney

Figure 16.1

- Flue Liner with Required Air Space
- Stainless Steel Chimney Connector
- Must Extend to Flue Liner
- Minimum 8” (203mm) Masonry Thickness in Front of Smoke Chamber
- Minimum Clearance in Accordance with Insert Listing
- Airtight Insulated Clean-Out
- Damper Plate Removed or Fastened in Open Position
- Seal with Non-Combustible Material
- Floor Protection in Accordance with Insert Listing
- Combustible Floor

Generic Insert Model Shown in Illustration
L. Ovalizing Round Stainless Steel Liners
Ovalizing round stainless steel liners to accommodate the liner passing through the damper region of a fireplace is an allowable and acceptable practice.

Ensure that the ovalization is minimized to the extent required to fit through the damper.

M. Altering the Fireplace
The following modifications of factory-built fireplaces are permissible:

<table>
<thead>
<tr>
<th>The following parts may be removed:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Damper</td>
</tr>
<tr>
<td>Smoke Shelf or Baffle</td>
</tr>
<tr>
<td>Ember Catches</td>
</tr>
<tr>
<td>Fire Grate</td>
</tr>
<tr>
<td>Viewing Screen/Curtain</td>
</tr>
<tr>
<td>Doors</td>
</tr>
</tbody>
</table>

- The fireplace must not be altered. Cutting any sheet metal parts of the fireplace in which the fireplace insert is to be installed is prohibited per ANSI Z21.88 except that the damper may be removed to accommodate a direct-connect starter pipe or chimney liner,
- External trim pieces which do not affect the operation of the fireplace may be removed providing they can be stored on or within the fireplace for reassembly if the insert is removed.
- The permanent metal warning label provided in the component pack must be attached to the back of the fireplace, with screws or nails, stating that the fireplace may have been altered to accommodate the insert, and must be returned to original condition for use as a conventional fireplace (Figure 17.1).
- If the hearth extension is lower than the fireplace opening, the portion of the insert extending onto the hearth must be supported.
- Manufacturer designed adjustable support kit can be ordered from your dealer.
- Final approval of this installation type is contingent upon the authority having jurisdiction.

N. Zero-Clearance Fireplace
A permit may be required for installations, final approval is contingent of the authority having local jurisdiction. Consult insurance carrier, local building, fire officials or authorities having jurisdiction about restrictions, installation inspection, and permits.

Inspect the existing fireplace and chimney for any damage or flaws such as burnouts, metal or refractory warping.

Inspection to a minimum of NFPA 211 Level II is recommended. All repairs must be made prior to installing an insert. The fireplace must be structurally sound and be able to support the weight of the solid-fuel insert.

The factory-built chimney must be listed per UL 127 or ULC 610-M87 for all installations. Install thermal protection per this appliance listing requirements.

A full height 6 inch diameter stainless steel full height listed chimney liner must be installed meeting type HT (2100°F) requirements per UL 1777 (USA) or ULC S635 with “0” clearance to masonry (Canada). The full liner must be attached to the insert flue collar and to the top of the existing chimney.

The flue liner top support attachment must not reduce the air flow for the existing air-cooled chimney system. Re-install original factory-built chimney cap only; see section on Prefabricated Metal Chimney on page 16.

To prevent room air passage to the chimney cavity of the fireplace, seal either the damper area around the chimney liner or the insert surround. Circulating air chamber (i.e. in a steel fireplace liner or metal hearth circulatory) may not be blocked. The air flow within and around the fireplace shall not be altered, blocked by the installation of the insert. (i.e. no louvers or cooling air inlet or outlet ports may be blocked by the insert or the insert surround.

See Altering the Fireplace on page 17 for modifications allowed for factory-built fireplaces.

WARNING
THIS FIREPLACE MAY HAVE BEEN ALTERED TO ACCOMMODATE AN INSERT. IT MUST BE RETURNED TO ITS ORIGINAL CONDITION BEFORE USE AS A SOLID FUEL BURNING FIREPLACE.

Figure 17.1

WARNING
Asphyxiation Risk.
DO NOT connect this appliance to a chimney flue servicing another appliance or to any air distribution duct or system. This may allow flue gases to enter the house.
5 Appliance Set-Up

A. Outside Air Kit
A source of air (oxygen) is necessary in order for combustion to take place. Whatever combustion air is consumed by the fire must be replaced. Air is replaced via air leakage around windows and under doors. In homes that have tightly sealed doors and windows, an outside air source is needed. An optional Outside Air Kit is available.

**Items Needed for Installation (not supplied)**
- Needed for option two:
  - 4 inch flex aluminum pipe, or if using alternate material, then it shall be made from durable, non-combustible, heat resistant material up to 350°F. - Cut the pipe to the required length for your installation.
- Needed for both options:
  - Phillips head screw driver
  - 5/32 Allen Wrench
  - Silicone sealant

**Option One - Installation Instructions**
1. Ensure existing access hole in fireplace will not be covered by the outer can. Existing outside air intake hole may be under at the rear or side of outer can. Outside air may also enter down existing chimney chase in some situations.
2. Level outer can and install appliance. After installing the appliance in the outer can, seal the fireplace opening and trim package with insulation to prevent air leakage into the room.

**Option Two - Installation Instructions**
1. Ensure existing access hole in fireplace is sufficient to feed the 4 inch flex.
2. After sliding can into fireplace, feed flex into cut opening to obtain outside combustion air.
3. Level outer can and install appliance.

**NOTE:** Do not use plastic wire ties that come with the kit as they will melt. You may need to install the flex pipe into the firebox first depending on installation. Attach flex to adapter with at least 2 screws.

---

**WARNING**

**Asphyxiation Risk.**
Outside air inlet must be located to prevent blockage from:
- Leaves
- Snow or ice
- Other debris
Block may cause combustion air starvation. Smoke spillage may set off alarms or irritate sensitive individuals.

**WARNING**

**Asphyxiation Risk.**
Length of outside air supply duct shall NOT exceed the length of the vertical height of the exhaust flue.
- Fire will not burn properly
- Smoke spillage occurs when door is opened due to air starvation.
B. Stove Pipe or Liner to Flue Collar
1. There are 4 already drilled holes in the flue collar 90 degrees apart. Attach the flue collar to the stove pipe/liner. If the seal is questionable use high temperature sealant such as stove mastic (Figure 19.1).
2. Attach gasket to bottom side of flue collar with a thin coat of silicone.

C. Optional Offset Adapter
Optional use of a Simpson Duravent 15° Universal Elbow Part Number 4615 may be purchased directly through your local Simpson Duravent Pipe Distributor or from your local Quadra-Fire dealer, Part Number DV-6DLR-E15ADSS. Figure 19.2 shows a vertical installations and also how to create an optional 30° elbow installation.

The 15° elbow may be secured directly to the flue collar. Follow the pipe manufacturer’s instructions for using screws or rivets for attachment. Most pipe manufacturer’s 6 inch (152mm) diameter flue liners may be attached directly to the top of the 15° elbow.

D. Appliance to Stove Pipe or Liner
1. Once you have the appliance in place and secured, reach up through the flue opening and grab the attachment bar and pull down inside flue opening (Figure 19.3).
2. Insert the 5/16 bolts inside the cast flue and through the chimney mounting bar. Securely tighten the nuts; fasteners are provided.
3. Re-install the tube channel assembly, baffle board, ceramic blanket and baffle protection channel.

NOTE: These are generic drawings and may not represent your specific model.
E. Power Cord
The power cord is shipped assembled to the appliance. You may route the power cord either to the left or right side depending on your configuration for power source (Figure 20.1).

<td>SP-5134</td>
<td>TRIMKIT-5134-NL</td>
</tr>
</tbody>
</table>

Table 21.1

1. Follow steps one through three of Section E. Flat Surround Installation on page 20.
2. Lift surround assembly to front of appliance (Figure 20.3 on page 20).
3. Assemble trim as shown in Figure 21.1.

4. Slide trim over flat surround as shown in Figure 21.2.

**NOTE:** May need to pull appliance away from fireplace to clear mantle as you slide the trim over the flat surround.

5. Install two steel springs at the top on each side and between the flat surround and the assembled trim kit as shown in Figure 21.3.

6. Install two steel springs on each side of the flat surround towards the bottom and the assembled trim kit (Figure 21.4).

7. If needed push appliance back into fireplace.
8. Reinstall face to front of appliance (Figure 20.2 on page 20).
9. Reinstall the door to the face of the appliance (Figure 20.2 on page 20).
H. Standard Surround & Cast Trim Kit

<tr>
<td>Cast Trim Kit</td>
<td>811-0930</td>
</tr>
</tbody>
</table>

Table 22.1

1. Remove contents from box being careful not to scratch or damage the cast trim pieces.
2. Lay surround face down on a protected surface to prevent scratching.
3. Place the peel and stick round felt vibration insulation pads on the front side in each corner of the top metal piece and on the back side in each corner of the top cast piece (Figure 22.1).
4. Place the corresponding cast trim pieces (2 cast trim sides and 1 cast trim header) underneath the panel set, also face down. Align the holes in the metal pieces with the 5 bosses on the top cast piece and 2 bosses on each side piece.
5. Secure the magnet to the bracket. The magnet is facing the front (Figure 22.2).
6. Place the cast footers under the metal sides aligning the top and bottom holes in the cast footers and metal sides.
7. The 9 mounting clips are shipped in one long strip. Hand break apart or use pliers.
8. Each clip has a clearance notch to allow room for the cast on the insert. Place the clip so the notch is facing the outer edges of the surrounds (Figure 22.3).
9. It is best to install all of the 1/4-20 screws only half way at first to allow for adjustments. After adjustment, tighten the 2 screws in each cast footer first and then work your way around to the rest.
10. Slide surround and trim over the top of the insert into place matching the mounting tabs on the metal sides with the slots on the insert (Figure 22.4).
11. Align the 2 screws in the top metal surround piece to the 2 alignment holes on the appliance top. Secure in place (Figure 22.4).
**Mobile Home Installation, Approved for USA Installation only!**

You must use a Quadra-Fire Outside Air Kit Part #:

**OAK-ACC**

1. An outside air inlet must be provided for combustion and must remain clear of leaves, debris, ice and/or snow. It must be unrestricted while unit is in use to prevent room air starvation which can cause smoke spillage and an inability to maintain a fire. Smoke spillage can also set off smoke alarms.

2. Unit must be secured to the mobile home structure at two attachment points. Remove bolts from each side of insert and use plumbers tape to secure to structure (a washer may be required). Re-install bolts.

3. Unit must be grounded with #8 solid copper grounding wire or equivalent and terminated at each end with N.E.C. approved grounding device.

4. The factory-built fireplace must meet (UM)84-HUD requirements for outside combustion air supply to the fireplace fire chamber and the chimney must be listed to UL103 HT or a listed UL-1777 full length six inch (152mm) diameter liner must be used. It must be equipped with a spark arrestor cap and the outside air must be installed on the insert.

5. Refer to pages 8-10 of this manual for clearance to combustibles and floor protections requirements. All clearances must be followed precisely.

6. Use silicone to create an effective vapor barrier at the location were the chimney or other component penetrates to the exterior of the structure.

7. Follow the chimney and chimney connector manufacturer’s instructions when installing the flue system for use in a mobile home.

8. Burn wood only. Other types of fuels may generate poisonous gases (e.g., carbon monoxide).

9. If unit burns poorly while an exhaust blower is on in home, (i.e., range hood), increase combustion air.

10. Installation shall be in accordance with the Manufacturers Home & Safety Standard (HUD) CFR 3280, Part 24.

**NOTICE:** Offsets from the vertical, not exceeding 45°, are allowed per Section 905(a) of the Uniform Mechanical Code (UMC). Offsets greater than 45° are considered horizontal and are also allowed, providing the horizontal run does not exceed 75% of the vertical height of the vent. Construction, clearance and termination must be in compliance with the UMC Table 9C. This installation must also comply with NFPA 211.

**NOTICE:** Top sections of chimney must be removable to allow maximum clearance of 13.5 feet (411cm) from ground level for transportation purposes.

---

**WARNING**

**Fire Risk. Asphyxiation Risk.**

Do not draw outside combustion air from:
- Wall, floor or ceiling cavity
- Enclosed space such as an attic or garage
- Close proximity to exhaust vents or chimneys

Fumes or odor may result

---

**CAUTION**

THE STRUCTURAL INTEGRITY OF THE MOBILE HOME FLOOR, WALL AND CEILING/ROOF MUST BE MAINTAINED

Do NOT cut through:
- Floor joist, wall, studs or ceiling trusses.
- Any supporting material that would affect the structural integrity.

---

**WARNING**

Asphyxiation Risk.
NEVER INSTALL IN A SLEEPING ROOM.
Consumes oxygen in the room.
